N. B. Truth, St. Paul, June 31, '08—'I've lived so long, remember well when the Mississippi was a brook. My good health and long life came by taking Hollister's Rocky Mountain Tea. 35 cents tea or tablets. C. L. Cotting.'

We have received from Colonel Kaley a copy of the program for the celebration at Cody, Wyoming, on the 4th and 5th, where the Colonel spent his Fourth. If the program was carried out in full, there certainly were "things doing."

The business college representative, who is here in these parts trying to secure students for the Grand Island college knows this: He does not get a cent for his talk to you unless you pay him some cash or sign a note. Compare his terms with the Red Cloud Business college terms and figure how much you are paying him for his talk.

The live stock department at the State Fair this year is already assuming vast proportions. It has been necessary for the management to build three more permanent swine barns, each containing thirty-eight pens, which increases the capacity so that about 1500 head can now be exhibited, and there have been requests for 250 additional pens filed with the superintendent.

One of Al Slaby's livery horses was brought in from a drive the evening of the Fourth and was left standing while the hostlers were attending to another team. The horse thought it was about time to go to bed, so he started on a run for his stall. As the rig passed another stall a horse reached out and smashed a wheel of the buggy with his heels and in the kicking match that followed the buggy was badly used up.

OLD ROMAN NAMES.

The Peculiar System That Was in Use by the Nobility.

The noble Romans were peculiar in their system of nomenclature. They had the praenomen, the nomen and the cognomen. The first of these distinguished the individual and was equivalent to our Christian or baptismal name. It was usually indicated by a single letter, as A. for Aulus, or by two letters, as Ap. for Appius, or three, as Ser. for Servius. The nomen was distinctive of the gens or clan and has no corresponding appellative among us. The cognomen was placed last and designated the familiae, precisely answering to our surname. Sometimes a fourth name was added, the agnomen, in consequence of a renowned action, some conspicuous event of life or feature of character. Sulpio, in addition to his regular names, was styled Africanus after his conquest of Carthage. The name Germanicus was assumed by those who distinguished themselves in the wars with the Germans.

In female names the Romans indulged but small variety of appellation, and fancy had little or nothing to do with their invention and bestowal. When there was but one daughter in a family she received the feminine termination of her gentile name, as Tullia, the daughter of Marcus Tullius Cicero, and Octaviae, the sister of Octavianus Caesar, etc., which names were retained even after marriage. When there were two daughters one was called Major and the other Minor, as Cornelia Major and Cornelia Minor. If there were more than two they were distinguished by their number, thus: Prima, Secunda, Tertia, Quarta, etc.

GREEK COINS.

How the Ancients Tested the Purity of the Metal.

The first coins of gold and silver that have come down to us are now dated as a rule in the time of Croesus, who lived about the middle of the sixth century B. C.

It may readily be imagined that a mere lump of gold, supposed to be of a certain weight, would be subject to skepticism unless it were guaranteed by some recognized authority. So, in order to save reweighing and testing at each transaction, these ingots or coins were stamped with the authoritative mark of a prince or state. So stamped they become the true coins in spite of the fact that, contrary to modern custom, they were not at all regular.

But, in spite of the guarantee that might be afforded by the mark of a state or a prince, we find the Greeks applying certain tests to determine the genuineness of the currency offered to them. Plating was easily detected by jabbing the suspected coin with some sharp instrument. At other times the touchstone was used. One which was known as the "Lydian stone" was supposed to reveal a proportion of foreign metal as small as a barley corn in a stater. Another test, in the case of silver, was to polish the coin and then breathe on it. If the moisture quickly disappeared the metal was pure. Yet another way to detect alloy was to heat the coin or coins on redhot iron. If the metal was unalloyed it remained bright, if mixed with other substances it turned black or red according as it was more or less impure.—Oliver S. Tonks in Chautauquan.
