When we tell you that, if our "Polk System" monolithic reinforced concrete Silo does not do all we say it will or will not do---you don't have to pay for it.

Now these are some of the things it will not do:

- It won't fall down and it won't blow down.
- It can't burn down and will not crack open.
- The acid will not eat the concrete---Neither will the walls absorb the moisture from the ensilage.

Here we put down what it is and **remember** we back up this statement---It is the best kind of silo possible---Reinforced Monolithic Concrete---Made by the best system known, up-to-date. It combines all the good points of all other silos and not one bad point of any of them.

And this is what it will do---It will preserve the ensilage **perfectly**---mind you---not as well as any other silo but perfectly

**To The Very Outside Edge of the SILO**

Now what's the use arguing whether this Silo will or will not do the things that are said of it. Try it out At **OUR** Expense.

Come in and talk it over with us any how. If we cannot prove to you that every statement made here is absolutely backed up by us, we will pay you for your time in coming.

Now, most of you believe that a silo is the biggest kind of a paying investment. If our statements are true, you can't afford to have any other make.

We offer you a chance to test the truth of these statements before buying. Everything considered, why hesitate longer about that Silo.
