Rearing the Philco Retaining Wall that makes possible a Two Year Guarantee

IT has taken five years to do it—five years of the most painstaking scientific research—to rear the PHILCO RETAINER. But it was worth it. For the result is the longest, strongest guarantee ever put behind a storage battery for automobile starting, lighting, and ignition.

The Philadelphia Diamond Grid Battery without the Philco Retainer was and is a good battery. Not one in a thousand has failed to outlive its long guarantee of eighteen months. But the Philadelphia Diamond Grid Battery with the Philco Retainer is even better. In grueling tests, it has outlasted and out-performed any other battery we could buy or build. In actual war service in the U. S. Navy, it has demonstrated its supreme practical worth.

THE new patented feature, the Philco Retainer, is a thin sheet of slotted hard rubber, which is placed flat against the active material of each positive plate. In any battery this active material tends to disintegrate and fall off. The faster this occurs, the quicker the battery wears out. Altho the slots in the Philco Retainer are so numerous that they allow the free passage of acid and current, each slot is so narrow that the Retainer is, in effect, a solid wall which holds the active material firmly in place.

This means for you at least six months extra battery service secured by a definite guarantee.
