Don't Depend on Spring Deliveries

Spring deliveries of Ford cars have never been certain and they should not be depended on. Demand has always been greater for Ford cars than the supply or production. So, if you would be sure of having a Ford car, buy it now while deliveries are possible. Do not wait—even next month is an uncertainty.

Only a limited, specified number of cars have been allotted to this territory. That allotment cannot be increased, because the demand all over the country is greater than the supply or production. Get your order in now and you will be one of those who is sure of a Ford car out of our allotment.

It is first come, first served. All orders are filled in rotation. So, if you would be forehanded, if you would be certain of having a Ford car when you want it—then you will buy a Ford car now. A signed order with us is your protection. It is the result of the wisdom of looking ahead.

If you buy a Ford car now don't think you will have to "store" it. The Ford is a car made to serve its owner in service and pleasure throughout the entire year. Ford owners have long since come to recognize the fact. It is no longer popular to "lay-up" your car for the winter. BUY A FORD CAR NOW, and use it now.

Insist on GENUINE Ford Parts

Rearing the Philco Retaining Wall that makes possible a Two Year Guarantee

IT has taken five years to do it—five years of the most painstaking scientific research—to rear the PHILCO RETAINER. But it was worth it.

For the result is the longest, strongest guarantee ever put behind a storage battery for automobile starting, lighting, and ignition.

The Philadelphia Diamond Grid Battery without the Philco Retainer was and is a good battery. Not one in a thousand has failed to outlive its long guarantee of eighteen months. But the Philadelphia Diamond Grid Battery with the Philco Retainer is even better. In gruelling tests, it has outlasted and out-performed any other battery we could buy or build. In actual war service in the U. S. Navy, it has demonstrated its supreme practical worth.

THE new patented feature, the Philco Retainer, is a thin sheet of slotted hard rubber, which is placed flat against the active material of each positive plate. In any battery this active material tends to disintegrate and fall off. The faster this occurs, the quicker the battery wears out. Altho the slots in the Philco Retainer are so numerous that they allow the free passage of acid and current, each slot is so narrow that the Retainer is, in effect, a solid wall which holds the active material firmly in place.

This means for you at least six months extra battery service secured by a definite guarantee.
