PE-RU-NA

A Great Medicine

Mrs. M. J. Miller, R. R. No. 1, Box 101, Calvert, Texas, writes:

"I have used Pe-ru-na and know it is good for colds, coughs and catarrh. It cured my catarrh and I do not take cold when I use Pe-ru-na. It is a great medicine."

During the last fifty years, Pe-ru-na has been looked upon as the reliable medicine for catarrh of every description, whether it be of the nose and throat, stomach, bowels or other organs.

By keeping Pe-ru-na in the house for emergencies, serious sicknesses may frequently be prevented. Use it after the grip or Spanish flu.

An Authority.

Willie—Papa, teacher asked us to find some new words that have just come into the English language. Can you tell me some?

Papa—Go ask your mother, Willie. She always has the last word.—New York Sun.

ALLEN'S FOOT-EASE DOES IT

When shoes pinch or corns and bunions ache, get a package of ALLEN'S FOOT-EASE, the antiseptic powder to be shaken into the shoes. It takes the sting out of corns and bunions, gives instant relief to smarting, itching, swollen feet. 100,000 pounds of powder for the feet were used by our Army and Navy during the war.—Advertisement.

Deception.

"How's this? You have no money?"

"None."

"Before we were married didn't you tell me you were interested in the Mammoth Oil company?"

"I am interested in contemplating the workings of such an efficient organization. But I don't own any of its stock."

ARE YOU GIVING OUT?

Does every day mean just another day of suffering? Are you lame, stiff and aching-tortured with a nerve-racking backache? Surely there's a reason why you feel so badly and likely it's weakened kidneys. When the kidneys fail, poisons accumulate and upset the whole system. That's why you have constant backache and sharp, stabbing twinges. You may have headaches, nervous and dizzy spells with annoying bladder irregularities. Don't risk serious kidney disease. Use Doan's Kidney Pills. Doan's have helped thousands and should help you. Ask your neighbor!

A Nebraska Case

Mrs. O. Lindburg, 307 Grand St., Blair, Neb., says: "I suffered a great deal with my back. When I got down I couldn't straighten up as sharp pains would catch me through my kidneys. My kidneys acted irregularly. Nothing done me a bit of good until I began to take Doan's Kidney Pills. Three boxes removed the backache and put my kidneys in a normal condition."

Bilious Attacks

Are Usually Due to Constipation

When you are constipated, there is not enough lubricant produced by your system to keep the food waste soft. Doctors prescribe Nujol because its action is so close to this natural lubricant.

Nujol is a lubricant—not a medicine or laxative—so cannot gripe. Try it today.

For Constipation

POROUS TILE IS NOT BEST DRAIN

Many Farmers Stick to Old-Fashioned Belief That Water Enters Through Walls.

POROSITY NOT GOOD QUALITY

Little Consideration Should Convince Most Skeptical That Openings Afford Ample Space for Admission of Moisture.

(Prepared by the United States Department of Agriculture.)

Among the old-fashioned beliefs in connection with the action of tile drains is the one that the water enters not through the open spaces in joints but through the walls of the tile. The fact that drains composed of hard burned or even glazed tile are found to operate as well as the most porous ones has not served completely to dispel this delusion, says the bureau of public roads, United States Department of Agriculture. Occasionally this view is set forth by writers. Tile makers even advertise

Place Tile as Close Together as Possible for Best Results.

their ware as "porous" in the mistaken belief that this is a desirable quality, whereas the contrary is true.

Ample Entry for Water.

Only a brief consideration of the matter should be sufficient to convince the most skeptical that the openings between the tiles afford ample entry for the water—and why should the water force an entry through the walls when the open door is there? The processes of manufacture do not permit of a tile with absolutely true and smooth ends. Pick out two of the most perfectly-shaped ones and it will be found that one cannot abut them together without leaving a considerable opening. In the ordinary run of tile-laying an opening of at least one-eighth inch is to be expected. This one-eighth inch around the periphery of, say, six-inch tile, gives an entrance of two and one-half square inches at each joint. Thus in eleven joints—a length of only twelve feet of six-inch drain—there is an entrance area equal to the cross-sectional area of the tile. In a drain of only moderate length there is likely to be available a dozen times more opening than the interior capacity of the tile can make use of.

Porosity Not Wanted.

One need not fear that the water cannot enter the tile. Place them as close together as possible, turning them around to get the closest possible fit. There need be no hesitation in the use of hard-burned tile, or, if available, sewer pipe with "bell" ends. Durability and strength are the qualities wanted—not porosity. In fact, porosity usually means inferiority, and is to be avoided, especially where the tile are laid above the frost line or so close to the surface as to be affected by the wheels of vehicles or heavy farm machinery.

MOTION PICTURE SHOWS BEES

Need for Requeening Colony From Time to Time and Proper Management is Shown.

Bee keepers will be interested in a new motion picture prepared by the United States Department of Agriculture showing the best practice in handling bees and the control of bee diseases. The film, which is called "Keeping Bees at Work," is intended to supplement a picture entitled "Bees—How They Live and Work," issued some time ago for more popular use.

The new picture shows the need for requeening the colony from time to time, the way to prepare the bees for wintering, the time to unpack the hives, the control of the swarm, and other details of management. The fact that the bureau of entomology will examine samples of combs to identify diseases and advise on their control is brought out.

The film is in one reel, and may be borrowed by extension workers and others entitled to the privilege, or prints may be purchased for approximately the cost of making them, which is about \$37.

MOISTURE CAPACITY OF SOIL INCREASED

Organic Matter in Any Form Is of Much Benefit.

Activities of Bacteria Largely Dependent on Supply of Decaying Material—Food and Air of Great Importance.

(Prepared by the United States Department of Agriculture.)

In addition to adding plant food to the soil and improving its texture, organic matter, supplied by green-manure crops, stable manure, or in any other form, adds greatly to the moisture-holding capacity. It has been shown, says the United States Department of Agriculture, that while 100 pounds of sand can hold only 25 pounds of water and 100 pounds of clay 50 pounds, the same weight of humus or decaying organic matter will hold 100 pounds.

Clay soil containing organic matter is more friable than similar soil without organic matter. When the organic matter is entirely removed the clay remains compact during freezing and thawing. When the organic matter is returned the soil crumbles after freezing, just as the original soil.

Not only do the higher plants grow better in a soil rich in organic matter, but the activities of the soil bacteria are largely dependent on the supply of decaying vegetable matter. These bacteria need food and air. Their food is the dead vegetable matter, which they break down and make available to the higher plants. Most beneficial bacteria use air, and this they find more abundantly in a soil supplied with organic matter than in stiff clays poor in it. In sandy soils there is air enough, but the addition of humus helps to hold moisture and so benefits the bacteria as well as the higher plants.

DRY MASH HOLDER FOR HENS

Device Takes Up No Floor Space, but is Easily Accessible—Also Holds Water.

Near-perfection in a dry mash holder for poultry is reached in the device shown below. The slats open to receive the mash and the bottom of the frame when closed makes a guard to keep the hens from throwing the feed out of the box. The feeder takes up no floor room, but is perfectly accessible to the fowls because the brackets that hold it up extend for-

Perfect Dry Mash Holder.

ward a few inches to support also an alighting perch, on which the hens can stand while eating. The same arrangement, but with a shorter box, would serve admirably to hold the water pail or fountain.—Farm Journal.

LOOSE HAY HARD TO HANDLE

Use of Press Makes It Comparatively Easy Matter to Store and Transport.

Loose hay is a bulky product and extremely difficult to handle in large quantities. Before the practice of pressing hay into bales became common it was difficult and expensive to transport this feed except to the extent of loading it on wagons and hauling it to a nearby town or city. As a result, the matter of supply and demand was quite largely local, and frequently there was wide variation in prices offered in different localities.

With the coming of the hay press, it was possible to put hay into bales which were easily handled, greatly reducing the space required for a given amount of hay, and making it possible to transport hay for long distances at costs which were not prohibitive.

CAMAS POISONOUS TO STOCK

Heaviest Losses Caused Among Sheep Flocks—Deadly Species Are Now Recognized.

Death camas, of which there are four principal species in the range country of the West, although causing heaviest losses among sheep, are also poisonous to horses and cattle. Under range conditions cattle are seldom poisoned. Horses are frequently made sick, but deaths are rare. A few cases are known where persons have been fatally poisoned by the weed. Children have eaten the bulbs out of curiosity and adults have gathered the plant, mistaking it for the edible sego. The United States Department of Agriculture has not found a remedy for poisoning by death camas, but the deadly species are now recognized, and ranchers may safeguard their flocks.

POULTRY

MARKET SEASON FOR GUINEAS

Latter Part of Summer and Throughout Fall is Best Time to Dispose of Fowls.

The marketing season for guinea fowl is during the latter part of summer, and throughout the fall. At this time the demand in the city market is for young birds weighing from one to two pounds each. At about 2 1/2 months old guineas weigh from one to 1 1/2 pounds, and at this size they begin reaching the markets in August. As the season advances the demand is for heavier birds.

The usual practice in marketing game birds is to place them on the market unplucked, and in most markets guineas are sold this way. They appear more attractive with feathers on, and sell more readily. Dressed, the small size and dark color of the skin are likely to prejudice the prospective customer who may be unfamiliar with the bird's excellent eating qualities. For hotel and restaurant trade, however, guineas should be dressed in the same way as common fowl. Better ask the dealer, before shipping, whether he wants the feathers on or off.

Guineas Are Usually Placed on Market Unplucked.

If the feathers are to be left on the birds all that is necessary in preparing for market is to bleed them by severing the principal blood vessels of the neck, allowing them to hang head downward until bleeding is complete.

If the feathers are to be removed it should be done by dry picking. When the brain is pierced after severing the blood vessels in the neck the feathers are loosened by a convulsive movement of the muscles and can be removed easily.

DEMAND IS FOR WHITE EGGS

An Exceptionally Keen Sense of Taste Would Be Required to Note Any Difference.

It would take an exceptionally keen sense of taste to distinguish any difference between white and brown eggs at breakfast, but human beings are such faddists that, in the opinion of some, the difference is there just the same. In New York the demand is for white shells, while in Boston the brown egg is just as popular.

"Some men will have only Dutch Belted cattle or Hampshire hogs," said one of the poultry specialists in the Department of Agriculture. "They are color enthusiasts. The liking for white-shelled eggs may have grown from associating the egg with the white poultry, an agreeable picture suggesting cleanliness. Actually, however, the brown-shell egg is every bit as good as the white until you arrive at the price in New York. The difference there sometimes is considerably in favor of the white."

At present all the general purpose breeds of chickens are layers of brown eggs. Some of the leading markets demand the white egg, however, and as the price favors the white product it is important to supply it if possible and at the same time produce a fowl having weight in meat.

POULTRY NOTES

The busy hen is the one that makes the best layer.

It pays to feed the young fowls liberally until they are full grown.

Be kind to your fowls; make friends with them and they will repay you. Fright reduces the egg yield.

Exercise makes the hens lay better, insures fertile eggs and makes the chicks grow strong and healthy.

Make the nest boxes of ample size, but not too deep. The hens, if large in size, will break the eggs in getting into the nest if it be too deep.

A hen too closely confined soon becomes restless and uneasy. Restlessness results in discomfort and the development of such vices as egg-eating, feather-pulling and cannibalism.

Respect for the Constitution.

"I am going to propose another amendment to the United States Constitution," announced the man of ponderous purposes.

"Another amendment!" rejoined Senator Sorghum, doubtfully. "We have a large number of amendments already."

"There is nothing to limit the number."

"There ought to be something. The Constitution is not very long, and is easily memorized. A statesman who proposes any more amendments should at least be required to stand up and prove that he knows the original document by heart."

CHEVROLET

for Economical Transportation

The Utility Coupé

Built Especially for Busy Men

\$720 f. o. b. Flint, Mich.

Here is a new closed car built especially for utility purposes in city or country driving.

Farmers and ranchers have long wanted a low-priced, economical, closed car of better quality and great durability—completely equipped with all the essentials of modern motoring.

Chevrolet Utility Coupé satisfies this need in every particular.

It also possesses distinct advantages for salesmen, business men, suburban residents and those who need a car for every day use providing protection against all kinds of weather.

The Chevrolet Utility Coupé has a high-grade, Fisher body with black finish; gray whipcord upholstery; plate glass windows; double ventilating windshield, sun visor and extra wide doors.

Under the rear deck is a compartment approximately twice as large as those usually found on coupés.

Comparisons Sell Chevrolet

Standard Rear Axle Construction. Strong, Quiet Spiral Bevel Gears.

Standard Transmission—three speeds forward and one reverse.

Standard Braking System—foot service brake, hand emergency brake.

Standard Electrical System—Starter, storage battery, electric lights.

Standard Cooling System—pump-circulation, large, honey-comb radiator and fan.

Standard Doors—two on roadster coupe, and light delivery, four on touring and sedan.

Standard Instrument Board—speedometer, ammeter, oil pressure gauge, lighting and starting switch, and choke pull.

Standard Type of Carburetor, with exhaust heater.

Powerful, Valve-In-Head Motor—the same type as used in successful cars selling at much higher prices.

Demountable Rims—with extra rim.

Many Other Advantages which will be noticed on inspection, comparison and demonstration.
