

WASHINGTON LETTER.

After spirited debating the Senate this week succeeded in passing a bill increasing the President's salary to \$100,000, but by striking out the appropriation of \$25,000 for traveling expenses the proposed salary will not be doubled but only increased by \$25,000.

Should the House concur in the action of the Senate and vote Mr. Taft \$100,000 and should he confine his wanderings to the distance traveled by Mr. Roosevelt during the year he will in reality have \$14,000 more than Mr. Roosevelt. The Democratic side of the Senate as was to be expected held out for the simple life and was emphatically of the opinion that the Presidential job was not worth more than \$50,000 and Senator Bailey of Texas who scoffs at the dress suit and other appurtenances of fashion believed that the President should pay his own expenses for entertaining; that he should not be supplied with a conservatory and if he wanted flowers to tame his savage breast he should buy them out of his own pocket.

country, will be the timber testing plant to be operated by the United States government. The plant will be located in the Machinery Hall and all known woods will be tested to determine their carrying strength to the breaking point.

The exhibit in the Forestry building at Seattle this year will be complete in every detail. There will be a comprehensive display of timber of various kinds showing the logs just as they leave the forest, besides sections and cross sections of the big timbers.

When completed, the Forestry building at the Seattle exposition will be one of the largest log houses ever built in the world and will be one of the most attractive buildings on the grounds of the 1909 exhibition.

GROWS HAIR ON BALD HEADS

Bald Headed People May Get a New Chance in Life.

In these days when youth is the moving factor in business; when a man makes his mark at thirty five and is ready to retire at forty five; when business houses pension the man we call "middle aged" rather than allow his lagging influence to intrude upon the commercial rush, a bald head is almost fatal to any man's hopes.

Resorcin is one of the latest and most effective germ killers discovered by science, and in connection with Beta Naphthol, which is both germicidal and antiseptic, a combination is formed which destroys the germs which rob the hair of its nutriment, and also creates a clean and healthy condition of the scalp, which prevents the development of new germs.

Pilocarpin is a well known agent for restoring the hair to its natural color, where the loss of color has been due to a disease of the scalp. Yet, it is not a coloring matter or dye.

This combination of curatives mixed with alcohol as a stimulant perfects the most effective remedy for hair and scalp troubles.

The famous Rexall "93" Hair Tonic is chiefly composed of Resorcin, Beta Naphthol and Pilocarpin. It makes the scalp healthy, nourishes the hair, stimulates the follicles. Where the hair is already bare, it enters the follicles, revitalizes the roots, supplies nourishment and stimulates a new growth.

We want you to try a few bottles of Rexall "93" Hair Tonic, on our personal guarantee that the trial will not cost you a penny if it does not give you absolute satisfaction. That's proof of our faith in this remedy and it should indisputably demonstrate that we know what we are talking about when we say that Rexall "93" Hair Tonic will grow hair on bald heads, except, of course, where baldness has been of such long duration that the roots of the hair are entirely dead, the follicles closed and grown over, and the scalp is glazed.

Remember, we are basing our statements upon what has already been accomplished by the use of Rexall "93" Hair Tonic, and we have the right to assume that what it has done to hundreds of others it will do for you. In any event you cannot lose anything by giving it a trial on our liberal guarantee. Two sizes, 50c. and \$1.00.

Japan Guards Against Paper Famine.

The Japanese also have looked over the contents of their industrial stores and have decided that something must be done toward conserving their remaining supplies of raw material for paper making.

In Japan, paper is used for almost everything from the silver-figured partitions of the Buddhist temple to the rude but wads of the laborer; from the silk-like vestments of the priest down to the rain-proof shield of the traveler. In fact, the ingenuity of the Japanese is only matched by the varieties of uses to which paper may be adapted.

The work of the United States government toward determining the amount of paper materials used and the source of future supply, is being followed by the Japanese, according to an advice from U. S. Cons 1 John H. Snodgrass, at Kobe. The imminence of the danger is apparent from the fact that the Japanese authorities have requested the paper mills department of the Mitsu Bishi Kaisha to take over some 7,500 acres of the bamboo forests of Formosa.

It is known that the bamboo tree has been the raw material from which the Japanese have recently made the larger portion of their paper products; so it is thought that, by introducing the improved methods of forest cultivation and harvesting, this tract of woods will furnish yearly 10,000,000 bamboos, adapted for conversion into paper pulp.

No matter whether the paper company will establish its mills in Formosa or ship the bamboo to Japan in a partly finished state, the development of this new source of raw material will be of high importance and may overcome the necessity of the Island Empire looking to foreign countries for the future supply of paper pulp.

1,500,000 Feet Of Lumber in A Single Building.

Every one of the big logs to be used in the construction of the forestry building on the grounds of the Alaska-Yukon-Pacific Exposition at Seattle this year will contain between 10,000 and 12,000 feet of board measure, or lumber sufficient to build the average frame house. Surrounding the big building will be 122 of these mammoth logs, forty feet in height and containing a total of more than 1,500,000 feet of lumber.

One of the most important exhibits in connection with the lumber industry, and one of particular interest to contractors and builders all over the
