The construction of a frame house with the liberal air space between siding and plastering is acknowledged by experienced builders to be the correct principle for a sanitary habitation. Such walls completely baffle moisture as well as the sudden changes of temperature. This, however, is only one of the advantages of frame construction—there are many more good reasons why wood is the accepted material for a home. Before you complete your plans we want to tell you some of the other reasons why you can't afford to overlook the construction that was good enough for our forefathers and show you the best in present day lumber.
