## NECESSITY

FOR THE SPECIALIST.

# DR. H. WAGNER.

Has long been acknowledged and more so at this day than any other. The vest field of medical science is ever increasing, and its numerous branches are brought nearer and nearer to perfection, and mo one man can any longer grasp them all Hence the necessity for dividing the labor. And it is true beyond all doubt that disease, affecting the genito-urinary organs need special study more than anything else, if we would understand and know how treat them properly. DR. H. WAGNER is fully aware that there are

DR. H. WAGNER is fully aware that there are many physicians, and some sensible people, who will conderon him for making this class of diseases a speciality, but he is happy to know that with most persons of refinement and intelligence a more enlightened view is taken of the subject, and that the physician who devotes himself to relieving the afficied and saving them from werse than death, is no less a philanthropist and benefactor to his race than the surgicular of the physician who by close application excels in any other branch of his profession. And fortunately or humanity, the day is dawning when the false philanthrophy that condemned the victims of folly or crime, like the lepers under the Jewish law, to die uncared for has passed away.

## Plain Facts Plainly Spoken.

At see time a discussion of the secret vice was entrely avoided by the profession, and medical works of but a few years ago would hardly mention it.

To day the physician is of a different opinion; he is aware that it is his duty—disagreeable though it may be—to handle this matter without gleves and speak plainly about it; and intelligent parents and grandlans will thank him for doing so.

The results attending this destructive vice were fermerly as tendersteed, or not properly estimated; and no importance being attached to a subject which by its instructions and investigation, it was willingly ignored.

Supreme Judge—Reed, 3,641, Hayes,

mority ast understeed, or not proporly estimated; and no importance being attached to a subject which by its nature does not invite close investigation, it was willingly ignored.

The habit is generally contracted by the yeang while attending school; older commanisons through their example, may be responsible for it, or it may be acquired through socident. The achiemant encerperienced, the practice will be repeated again and again, until at less the habit becomes firm and completely anslaves the victim. Mental and nervous at flictions are usually the primary results of self-abuse. Ameng the injerious effects may be mentioned lassication of irrascibility of temper and general sibility. The boy seeks sections on and rarely joins in the sports of his companions. If he be a young man he will be little found in company with the other sox, and is treatled with exceeding and annoying bashfulness in their presence. Laudvious dreams, canissions and cruptions on the face, etc., are also prominent syrapsions.

If the practice is violently persisted in, more serious disturbances take place. Great pulpitation of the facer, or splicptic convulsions, are experienced, and she sufferer of mally, death relieves him.

To all those engaged in this dangerous, practice, I would say, first of all, stop it at once; make every possible effort to do so; but if you fail, if your nervous system is already too much shattered, and consequences at some future time. The number of young men who are incapaciated to fill the duties explained by wellock is alarmingly large, and in most of such cases this unfortunate condition of things can be traced to the practice of self-abuse, which had been abandoned years ago. Indeed, a few months' practice of this habit is surfacient to induce spermatorrhosa in latery sare, and I have many of such cases under treat mont at the present day.

It will be seen by the above ticket with the single exception of the contraction of the practice of this habit is surfacient to induce spermatorrhosa in latery sare, and

Dr. Wagner will guarantee to for-feit \$500 for every case of seminal weakness or private disease of any Kind and character which he under-takes to and falls to cure.

## Middle Aged Men.

There are many at the age of 20 to 60 who are troubled with too frequent evacuations of the bladder, often accompanied by a slight smarting or burning sensation, and a weakening of the system in a manner the patient cannot account for. On examining the urinary deposits a ropy sediment will often be found, and sometimes small particles of albumen will appear, or the color will be of thin milkish hue, again changing to a dark and torpid appearance. There are many meny men who die of this difficulty, ignorant of the cause, which is the second stage of seminal-weakness. ## Let Your Light Shine.

Dr. Wagner, the celebrated specialist, of Denver. Colo., 343 Larimer street, believes in letting the world know what he can do, and is doing for thousands of his fellowmen. His treatment for lost manhood is sure to win him a name that posterity will bless. Ten thousand testimonials from all over the United States from those he has cured, is proof positive that hedoes cure the worst case of these diseases. The afflicted from chronic and sexual diseases of every kind will find him their hest friend. Read his advertisement in all our city papers, and call on him for advice, as we know you will corroborate us in saying he is the sufferer's true friend.—Rocky Mounrain News.

## Relief to the Afflicted.

In medicines, as in science, the specialists are the ones who always comes to the front and accomplish great results. This remark is especially applicable to to Dr. H. Wagner, of this city. He stands at the top of his profession, and the cures he performs for the unfortunate would seem wonderful if not properly viewed in the light of scientific acquirements. He is endorsed by the most eminent of the medical faculty. "Personally, I must own that my sen commotion and the rattle of furniture, the chorus of native shouts and palavering that was suddenly wafted across the lagoons in the dead of night, the quick variations of temperature, and the alternate calm and fury of the sea, all contributed to render the scene a peculiar one, to say the least of it; and to be un ceremoniously turned out of a feverish bed into night air teeming with climatic miasma, was exceedingly objectionable. All domestic animals were wildly excited, and showed signs of great alarm. Since the event the weather has become remarkably cool, considering our proximity to the equator, the average temperatures being night and morning 72 degrees, sun 97 degrees, shade 86 degrees.
