**Consumers Public Power District**

**CURRENT NEWS**

Planning for Tomorrow's Electrical Progress Today

**Plant Start, Other Events Forecast a Bright Future**

An eventful 1958 forecast much of future significance for all Nebraskans in general and customers of Consumers Public Power District in particular.

The brightest promise for the future was revealed as ground was broken for the District's nuclear power plant on a 640 acre site near Hallam.

Major grading and land leveling at the site were completed during the fall of 1958, with first construction activity scheduled for the spring of 1959. The plant will go into operation on a conventional steam power basis in the spring of 1961, and on a nuclear basis in 1962.

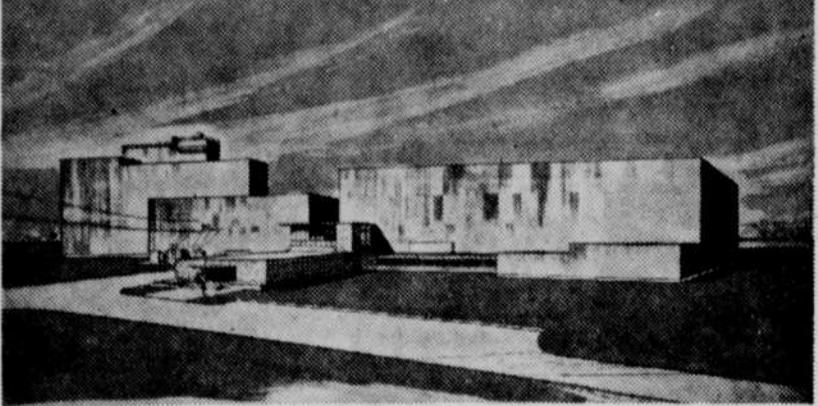

Completion of the plant will make available to Nebraskans another 100,000 kilowatts of electrical energy.

Meanwhile, research is being pressed into the possible uses of radioactive wastes from the plant in industry and agriculture. Such uses are expected to open the door to wonderful opportunities for a vast expansion of Nebraska's economy.

**Amendment Assures Continued Payments**

Approval of a constitutional amendment in the 1958 general election assures Consumers Public Power District's continued and increased payments in lieu of taxes to school districts, municipalities, counties and the state.

The amendment provides for payments up to 5% of the District's gross retail electric revenues in cities and villages.

This is a perspective of the Sheldon Station and Italian Nuclear Power Facility, looking northeast. The nuclear reactor plant is at the right with conventional steam generating facilities in the adjoining buildings. All of the reactor itself will be underground, shielded by five-foot walls of concrete.

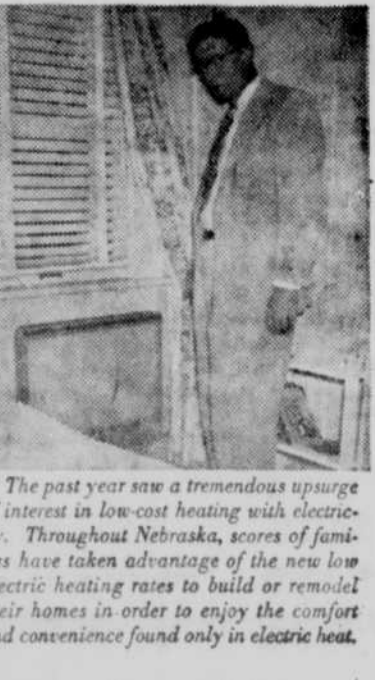

**Sales of Power Reach New High**

Nebraska electric users during 1958 continued to take greater advantage of the availability of low cost power to Live Better... Electrically.

Total number of customers (120,000) served by Consumers; total kilowatt-hour sales of 875,000,000; total kilowatt-hour sales to residential customers of 265,000,000; and average annual use of 3,065 KWH per residential customer all reached new records.

A tremendous upsurge of interest in low-cost, high-comfort home heating with electricity was noted during the year.

Meanwhile, the average cost per kilowatt-hour to the residential customer served by Consumers Public Power District

The past year saw a tremendous upsurge of interest in low-cost heating with electricity. Throughout Nebraska, scores of families have taken advantage of the new low electric heating rates to build or remodel their homes in order to enjoy the comfort and convenience found only in electric heat.

**Never Too Many Cookie Recipes!**

Is there ever a homemaker who has too many holiday cookie recipes? We doubt it, and so, apparently, does Owen Parkinson, retail salesman of the local Meadow Gold Dairy who provided us with this intriguing new recipe.

It is for double chocolate chips—a butter drop cookie created by Beatrice Cooke, director of the company's test kitchens in Chicago. Both semi-sweet melted chocolate and chocolate chunks go into the rich dough.

**DOUBLE CHOCOLATE CHIPS**  
(Makes 3 1/2 dozen)

1/2 cup butter  
1/2 cup sugar  
2 eggs  
1 teaspoon vanilla  
1/2 6-ounce package semi-sweet chocolate pieces, melted  
1 cup sifted all-purpose flour  
1/2 teaspoon salt  
1/2 6-ounce package semi-sweet chocolate pieces

1/2 cup chopped black walnuts  
Cream butter and sugar until light and fluffy. Beat in eggs and vanilla. Stir in melted chocolate. Add sifted dry ingredients, mixing well. Fold in chocolate pieces and nuts. Chill dough. Drop by teaspoonfuls onto a lightly greased cookie sheet. Sprinkle with granulated sugar or chopped nuts. Bake at 375 degrees for 12-15 minutes. 37c
