

IFYE in Taiwan

Pat Schaudt and Rod Henderson help their 4-H club friends bring in a load of bamboo shoots, an important item in Taiwan cookery. Pat learned how to cook on a "feng-lu" or charcoal brazier, as do most rural families, but found brick ovens in wide use as well.

Dave Livingston says: What he needs to protect him is His mammy... you...and Terramycin[®] Net Wt. 1/4 Ib. A new-farrowed pig has a rough time of it. There are A new-farrowed pig has a rough time of it. There are only three things in this old world to take care of him. You to house him . . . his mammy to feed him . . . and Terramycin to protect him.

Terramycin Soluble Powder to protect him right after farrowing . . . even before he startz eating.

That's right . . . helps stop scours, the disease that kills off more young pigs than any other cause. And it's a good way to help get even graph and telleraless. it's a good way to help get even runts and tailendern started off right. Terramycin Soluble Powder is potent help against acours, (enteritis, dynamicries), respiratory diseases and bacterial complications associated with pneumonia. TERRAMYCIN Treat immediately after farrowing ... repeat for Soluble Powder 3-4 days. It's easy too . . . with the Herd-Treater packed right in every special 1-lb. package. The Head Treater holds enough to treat up to 24 pigs without refilling ... measures out the eract dough meaded every time.

Remember at farrowing time ... and at any other stress or critical period, use Torramycin Animal Formula Soluble Powder. At your animal health supplier's post HIGHLY CONCENTRATED COMPLETELY SOLUBLE plier's now.

Two young Americans who traded more familiar wheat and corn, dairy cattle and other home grown farm products, for rice, bamboo shoots and brazier cooking, have just completed an absorbing student tour of Taiwan. Eunice "Pat" Schaudt of Pinckneyville, Illinois, home ec. grad from the University of Illinois in 1957, spent all her life on a medium sized farm and has been a 4-H member for eleven years. Rodney L. Henderson of Little Rock, Arkansas, is an animal husbandry major at Mississippi State University, and knows more about dairy and beef cattle than he does about Taiwan's water buffalo.

Both have been on Taiwan as 1960 representatives of the International Foreign Youth Exchange (IFYE). Although they visited different areas of Taiwan, they occasionally crossed paths, stopped to exchange notes and ideas, dined as guests in the same rural homes.

Pat, as a home economics major, was more concerned with the domestic phases of farm life on Taiwan. Rod, who plans a career with the packing industry, was most interested in meat animals. He reports Taiwan farmers have good stock and are good managers, but are forced to do far too much work by hand.

Both Pat and Rod feel that the IFYE program is a wonderful way to promote international good will and understanding.

The travellers often saw sights such as this—Wu Chin Ming pedaling his stock to market with a rumble seat chicken basket and a duck supervising delivery procedures on top. Taiwan farmers raise more ducks than chickens since ducks forage for themselves and can be driven in flocks over a harvest rice field to salvage the fallen grain.
