When asked why they COOK ELECTRICALLY women say:

"It's Cool!"

"Electric heat goes into the food—not the kitchen. Direct contact between the pan and heating element provides cooler, faster, thriftier cooking . . . cleaner pots and pans, too. Electric ovens require no vents, so are insulated on all six sides—all the heat stays in the oven. Once the oven temperature is up, it automatically shuts off for fully three-fourths of the time . . . that saves electricity!"
