State Foster had a conference with Mr. Herbert over the question of tolls on the Canadian canals in connection with retaliation passed by congress. The conference was quite extended, but the results, if any, were carefully guarded. It is said Mr. Herbert intimated that discriminating tolls charged against American vessels for using the Canadian canals, while within the letter of the treaty between the two countries re-specting the navigation of the canals and the St. Lawrence, were probably not in accordance with the spirit of the document. He disclaimed any knowledge of any intention on the part of the Dimother country, to enter upon or authorize a series of reprisals against the United States in case President Harrison acts under the terms of the nev law. He probably recognized, if he did not admit, the futility of such a course. as it would lead to the entire suspension of a great part, if not the greater part of nental line. It was said at the state department that the officials did not know that Sir John Thompson of Canada is on his way to Washington to secure a pledge from the president that he will not issue his proclamation until the op-

portunity is given to the Canadian government to hear from England and decide on a line of immediate action.

If approved by his colleagues of the sub-committee the report will then be laid before the full committee for adoption. No report has been made on the testimony of the Pinkertons, as it has not yet been dicided whether or not the investigation so far as it relates to that body will be continued. Colonel Oates' report incoporates five subjects which are thoroughly discussed, as follows: 1. Whether the reductions of the scale

of wages of the Carnegie company are justifiable. 2. Whether the treatment of the em ployes was k nd and just. 3. Whether the men were justified

Stone Rollingpins Among the most valuable of the stone ware utensils are the rollingpins, which seem to come nearer to solving the problem of a rollingpin than any other. A wooden rollingpin is certainly not all that could be desired. It is not cold, it is apt and bent and gray, but the shoes he still to become rough, and it is always an ab sorbent of grease, and needs to be repeatedly scrubbed to be kept clean. Paste cannot stick to a roller of stoneware, it is so highly glazed. It is nearly as cold as mar-ble and far better, because it is lighter. The plate glass rollingpins which were in-troduced by some ingenious inventor some years ago, and which were intended to be filled with cracked ice in order to chill

them, proved to be a failure. As on any glass dish containing ice water, beads of moisture settled on the outside when the rollingpin was filled, and me. I marched every foot of the way from Fort Leavenworth to Fort Bayard. a distance of 1,300 miles, in the cowhide outside when the rollingpin was filled, and a drop of moisture, as every expert pastry maker knows, is sufficient to injure the best pastry. Yet the inventor builded better than he knew. So cool and smooth was his glass rollingpin that housekeepers speedily ado; ted it without the ice filling. Why does not some ingenious inventor give us a rollingboard of enameled wood, something that is cold on the surface and not too expensive for universal use? On has the art of enameling wood never been brought to perfection, like the art of ena street which is as quiet as a Sabbath brought to perfection, like the art of en-ameling metal? cumbrous and expensive for family use.-

Milk for Children. Milk is gradually being appreciated for its hygienic value, and contains all the elements necessary for the formation of blood, bone and muscle. It is frequently prescribed by physicians as a remedy in various forms of illness. When pure it is of infinite service; when tainted it is positively dangerous. In one instance in a wealthy family, where a baby was slowly was slowly was a war a well not mill men property. wasting away, a well paid milkman provided milk according to the once popular fallacy, "from one cow." A sample was analyzed, and each teaspoonful was found to contain, in round numbers, half a million bacteria. Immediately the rule was laid down that all milk given should be sterilized.
