THE KING OF BEASTS.

He Is Merely a Big Cat, After All, a If we quit heraldry for fact and go by the testimony of travelers and hunters it is very doubtful whether the lion deserves his magnificent reputation. It is his appearance, no doubt, which has gained for him the appellation of "king f beasts," with all the regal honor pertaining to it. Certainly he looks "every inch a king." Nothing can be finer. The fancy itself could conceive nothing more fittingly representative of majesty than the full grown male lion, gazing with great yellow eyes, which seem to know no fear, and the ample honors of his shaggy mane wrapped round his massive front and forearms. He looks like the

embodiment by nature of lordliness and magnanimity, and he has been adopted as such in all literature and poetry from Homer and Æschylus down to the "lion comique" of our music halls. Yet he is only a cat-a great cat-after all, and those who know him in his native wilds give a very different character of "felis leo" from popular conceptions.

We do not wish to calumniate a crea-

ture so intimately connected with British story and so dignified in bearing and behavior, for nobody can deny that the lion is a great gentleman in his manners. Nevertheless, African sportsmen relate that he can show himself as cowardly as he is cruel: that he will abandon his consort and cubs in a moment of extreme danger, and that he scarcely ever charges straight home upon anybody who, armed or unarmed, has the presence of mind to await his onset. He is described as very nervous and very cun-

ning, and dreading beyond everything the superior prowess of the white man. The early Dutch settlers at the cape speak of lions prowling round the fort at night "in such numbers as though they would take it by storm." Now one must go very far into the African is that he has learned the craft of silence and is seldom or never heard to lift up his mighty voice except in the far wilderness, where the hunters have not come except singly. Thus it is written in an African guidebook: "Though his footprints may frequently be seen near the nountains of Lokaron and Boatlanama. and he will sometimes venture to carry away an ox from a wagon span thereabouts, he rarely or never makes his presence known by his rear, having learned apparently that it will only have the effect of frightening off the few timid antelopes upon which all hopes of replenishing his larder depend, or, worse still, of betraying his position to his in-

veterate enemy and persecutor, man."-

London Telegraph. It Was All Lore. A writer for the Boston Transcript was the witness the other day of a very pretty scene on a street car. There was an old negro woman-a very black old woman-whose face, besides being black, was pockmarked. No doubt a superficial observer would have called her repulsive, but there was a sweet and kind-ly look in her eyes and a benevolent expression about her black features which.

as you looked at her, gave you a glimpse of something beautiful. At her side, with his sweet child face toward the window, knelt a little white boy-a handsomely dressed little chap with blond curls and blue eyes. He for 50 years. At the end of that period asked the old black woman questions she would make new arrangements. A now and then, which she answered with check for £25,000 accompanied this let-

Atomic Principles.

A side light is being thrown on the naphysical discussion between Armstrong and Hartly as to the connection existing in the constitution of certain organic compounds and the colors they exhibit. We may take it as an established fact that a relation exists. And if so, then why may not elements of distinct and characteristic color be considered as complexes analogous to definitely decomposable substances? The two elements. nickel and cobalt, of decided color in their salts and in their metallic plates, add strength to this idea in that they may be considered as exhibiting a sort of isomerism. Their atomic weights are the same within limits of experimental error, and by analogy with compounds identity of atomic weight implies dissimilarity in constitution and therefore definite structure.-Science.

CHANGING PIANISTS.

al Performance That Proved

"As interesting as anything I've seen in this town," said a visitor to the city, "was a change of pianists that I saw in a variety theater. There was a man on the stage singing a song, and the planist was playing the accompaniment. I happened to see the pianist glancing to the left once, and I looked in that direction myself and saw coming down the aisle a man that I judged must be the relief pianist, and so he was. I imagined that he would sit down for a moment and

wait, but, dear me, I was very slow. "He was approaching the piano at the bass end of the keyboard. When he had almost reached the corner of the piano, the man who was playing began gently sliding off the seat to the right, still playing. By this time the relief was abreast of the bass keys, and these the first player, who was still sliding steadily to the right, now relinquished to him. and then the newcomer, still standing, but also moving steadily to the right,

struck in in perfect time and tune. "There was a brief time, a second or two, when both men were playing-the retiring pianist the treble and the oncoming player the bass-and for a fraction of a second they were both stand ing. But now the new player is fairly opposite the center of the keyboard. He settles into the seat, and now it is his hand that strikes the treble, and now the whole piano resounds to his resolute

"In fact, there never was a minute when the piano had anything to say about it. There never was a minute when the men were not completely masters of the situation. There never was an instant from the time the relief approached until he was firmly settled in his seat when both men were not continuously in motion, but the change was made without a jar or a slur in the music and without the omission of a note.

A Royal Book Buyer. Empress Catherine II of Russia was a great reader and a lover of books. One of her services to letters in Russia was the purchase of the libraries of Voltaire and Diderot. She was a warm friend and admirer of these French philosophers, and their work interested her because she was eager to learn new theories of politics and government. Voltaire's library of about 7,000 volumes is now a part of the Russian imperial library in the Hermitage palace, and in

the hall devoted to it is Houdon's statue of Voltaire. The story of Catherine's purchase of Diderot's library is interesting. It is creditable to her tact and her generosity. Diderot named £15,000 as the price of his library. Catherine II offered him £16,000 and named as a condition of the bargain that her purchase should remain with Diderot until his death. Thus Did-

erot, without leaving Paris, became Catherine's librarian in his own library. As her librarian he was given a yearly salary of £1,000. One year this salary was not paid. Then Catherine wrote to her librarian that she could not have him or her library suffer through the negligence of a treasurer's clerk, and that she should send him the sum that she had set aside

DEAB MR. DEVIL-Please come and take Aunt Jane. Please be quick. Yours,

It is to be regretted that not a single letter by a Roman or a Greek child survives, the nearest approach being, perhaps, some verses written by a child of later. The ancients doted on their children. Catulius wrote an ode to his daughter's sparrow, Ovid to his children's parrou, and the Greek's wrote epigrams to their children's toys. They children for playthings in the world of spirits. But no voice of a Greek child comes to us across the gulf of time .-

"The Lost Continent."

Dr. Bowdler Sharpe, the well known ornithologist of the British museum, delivered a lecture at the Savage club on "The Lost Continent." Dr. Sharpe first illustrated the zoo geographical regions this also to some extent, as nearly all of the world, with their peculiar forms have now posted trespass notices for their of bird life, and explained the occurrence of isolated forms in different portions of the globe by the existence of a former land connection now vanished beneath the sea. The idea of an ancient tropical continent at the south pole uniting South America, Madagascar and Australia is arousing considerable interest and discussion in scientific circles at the present time, chiefly owing to the support which it has received from the recent discoveries in the Chatham islands of Mr. H. O. Forbes, the well known Malayan traveler. The lecturer in conclusion dealt with some problems of the geographical distribution of birds for which no reasonable solution has yet been offered .-St. James Gazette.

Sweetheart Abbey. There is in Galloway, Scotland, an an-

cient ruin known as Sweetheart abbev. Within its ivy covered, storm battered walls lies buried the affectionate and devoted Dervorgill, with the heart of her husband, John Baliol, embalmed upon her breast. Lovely in their lives, in death they are not divided. The crumbling masonry is still and must ever be a romance in its symbols of death and decay, telling every day, as it has for 600 years, the thrilling story of a woman's tender love and devotion.
