## ALL SICK WOMEN

SKOULD READ MRS. FOX'S LETTER

In All Parts of the United States Lydia E. Pinkham's Vegetable Compound Has Effected Similar Cures.

Many wonderful oures of female ills are continually coming to light which have been brought about by Lydia E. Pinkham's Vegetable Compound, and

through the advice of Mrs. Pinkham, of Lynn, Mass., which is given to sick women absolutely free of charge

The present Mrs. Pinkham has for twenty-five years made a study of the ills of her sex; she has consulted with and advised thousands of suffering women, who to-day owe not only their health but even life to her helpful

Mrs. Fannie D. Fox, of 7 Chestnut Street, Bradford, Pa., writes:

Dear Mrs. Pinkham "I suffered for a long time with female trouble, and finally was told by my physician that I had a tumor. I did not want to submit to an operation, so wrote you for advice. I received your letter and did as you told me, and to-day I am completely cured. My doctor says the tumor has disappeared, and I am once more a well woman. I believe Lydia E. Pinkham's Vegetable Compound is the best medicine in the world."

The testimonials which we are constantlypublishing from grateful women establish beyond a doubt the power of Lydia E. Pinkham's Vegetable Compound to conquer female diseases.

Women suffering from any form of female weakness are invited to promptly communicate with Mrs. Pinkham, at Lynn, Mass. She asks nothing in return for her advice. It is women has proved to be more precious

Enormous New Pear. London Gardener's Chronicle in a recent issue illustrates a new pear now being introduced by the distinguished pomologist, M. Charles Baltet, Troyes, France. M. Baltet thinks this pear, for which Le proposes the name "Roosevelt," is destined to bring about a revolution in fruit gardens and orchards.

The tree is said to be a robust grower, and very productive, either as a standard or as a dwarf, grafted on quince stock. The pears grow very large, sometimes measuring over five inches in diameter. The cut is sup-

posed to be about half the natural size of the best fruits. The flesh is snow white, melting and cf a delicate, sweet and agreeable flavor.

to November, being in good eating condition through the whole month of October. M. Baltet has tested it for years, and does not hesitate warmly to recommend it. His great reputation will go far to encourage trials of this sensational variety.—Farm Progress.

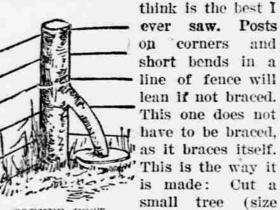

What Our Farmers Produce.

The American farmer raised in 1905 2,708,000,000 bushels of corn, 740,000, 000 bushels of wheat, 1,300,000,000 bushels of oats, 35,000,000 bushels of rye, 150,000,000 bushels of barley. 30,-000,000 bushels of flaxseed, 250,000,000 bushels of potatoes, 28,000,000 barrels of apples, 3,000,000 bushels of onions, 910,000 bushels of cranberries, 650,-000,000 pounds of rice, 280,000 tons beet sugar, 11,000,000 bales of cotton, 58,000,000 tons of hay, 42,000,000 pounds of broom corn and 156,000,000 pounds of tobacco. In addition milk, butter and cheese from 17,570,000 cows, which products alone will be worth in 1906 more than \$665,000,000. He values his cows at \$482,000,000, to say nothing of the 43,700,000 other cattle, worth in round numbers \$663,000,000.

Just to make the figures even up, add another \$1,500,000,000 for horses and mules and 47,400,000 sheep and swine in the barns and fields. Next year he expects to handle 1,800,000,000 dozen of eggs.

Good Corner Post.

There are a good many ways to make corner posts, but they are not all good ones. I send a sketch of one which I think is the best I

you wish for post) that is forked. Cut fork one foot shorter than body. Put post in ground, turn fork on inside corner and place rock under end of prongs. Corner posts made this way will never pull over. To hold fence on banks or hill sides, cut short posts-say three feet longand dig holes two feet deep above each post. Put in post, then nall plank between short post and fence.-Roscoe

Why Cows "Lose Their Cud." When a cow "loses the cud," or, That Delightful Aid to Health more correctly, fails to "chew the any definite object or material, which, if she still retained, would be used as a "cud," for all such necessary material lies useless in her paunch. Her failure to chew the cud is due to ill health, just as a lack of any desire for food characterizes a sick man. A cow that fails to chew the cud is a sick cow, and as soon as she recovers from that sickness she will recover her desire and ability to chew the cud.

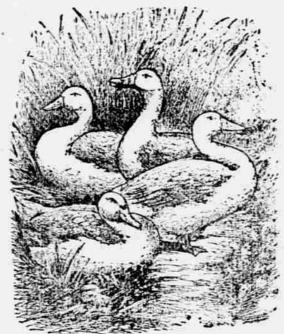

Fortunate Farmer From the annual report of the Secretary of Agriculture, it appears that farm crops in the United States have never before been harvested at such a high general level of production and value as during the present year. Corn has reached its highest production, over 2,700,000,000 bushels, of a total estimated value of \$1,216,000,000. Hay comes second, with a value of \$605,-000,000; cotton is expected to yield \$575,000,000; and as to wheat, the short | for \$58.

op of last year is followed by a crop of 684,000,000 bushels the value of which, \$525,000,000, is larger than was ever before reached. It is interesting to notice that the estimated value of milk and butter, \$665,000,000, was larger than the value of any crop except corn, and that the product of eggs was valued at only \$5,000,000 less than the large wheat crop.

White Aylesbury Ducks.

The soft white plumage is one of the chief attractions of the Aylesbury breed, and like most white plumage has a tendency to assume a yellow hue if exposed to the sun. The beak will also lose its delicate pink hue and become yellow if exposed to too much sunlight in summer. The bill of the Pekin should be yellow, but the bill of the Aylesbury should be a delicate pink or flesh-color, and birds intended for exhibition must possess this quality or they will suffer at the hands of the judge. Birds raised for exhibition purposes must be guarded against too much exposure to the sunlight in the summer. Of course, these delicate points are of no consequence to the market poulterer other than to show the true type of the breed.

For farm purposes the Aylesbury is to be recommended, second only to the Pekin; it possesses the many good qualities of the Pekin, and can be bred with almost the same success. The advantages claimed for Aylesbury are the ease with which it is acclimated, thriving in every country and climate; its early maturity; its great hardiness; its large size; its great prolificacy, and the real beauty which it possesses. Raisers recommend for raising exhibition birds one drake to two ducks, or two drakes to five ducks, all being allowed to run together. Duck raisers who raise large numbers for market The color of the ripe fruit is light | breed them as they do Pekins, using absolutely free, and to thousands of yellow shading to lemon, with bright from four to eight females to one red spots on the sunny side. The season | male, according to the season of the in Northern France is from September | year. Fresh blood is introduced every

year to keep up the size, and breeding stock is seldom kept longer than the second or third year.—Exchange.

Wasting Feed.

A large proportion of the hay and fodder produced on farms is stacked, but hay stored in the barn will keep in much better condition than when stored in stacks. It is almost impossible to escape loss when it is exposed in stacks. Damaged hay will be wasted by the animals, and there is an additional loss in quantity by exposure that may not occur in the mow. It is better to sell the hay that cannot be stored in the mow than to accept risk of the weather.

Fodder can be as truly wasted when put in the stomach as when trodden under foot. Unhoused cattle have a continuous battle for comfort, and all consumption of food shows no result, for the reason that it is used wholly in keeping life. Moreover, they are stuunted by their stay at this unthrifty stage, and will never show as good results afterward.

Inoculation Improves Hay.

The Michigan Experiment Station has been investigating the inoculated nodule method in regard to its effect upon the composition of the crop. Many farmers have reported that the presence of the nodules has not increased the bulk of the crop, but the station reports, after analysis, that the nodules ncrease the amount of protein present.

Two areas of soy beans flourished side by side, one with nodules and the other without; no difference in color, height or earliness was noted, nor greater weight of hay.

When analysis was made of the hay cud," it is not because she has lost it was found the hay from the nodulebearing plants contained 18.52 per cent of protein, while the hay from noninoculated plants contained but 9.56 per cent. With cowpeas the experience was similar.

Exclusive Corn Diet.

It has been concluded at the Wisconsin experiment station that it is impracticable to raise young pigs on an exclusive corn ration. "The feeding trial made dwarfed animals out of every pig in lot 1, fed exclusively on corn. While they gained some in flesh they did not develop in bone, and as time went on their vitality decreased. The hair on their bodies became thin and their skin hard and scaly. Toward the end of the trial they were indifferent about eating and showed considerable uneasiness."

The chair used by Napoleon at St. Helena was sold in London recently Resumed His Seat.

J. M. Barrie, when a student at Edinburgh University, on many occasions gave evidence of that quaint and delightful humor with which his admirers are familiar. In those days, as now, smoking concerts-symposiums, as they are called-were, as they are still, a feature of student life in the capital, and it was in connection with one of these that the following incident occurred:

One student, distinguished for the length of his visage and the portentous solemnity of his manner, had been called upon to make a few remarks. In lugubrious tones he began by saying that he was neither a prophet nor the son of a prophet. What he intended to say further was never known, for at this point he was interrupted by Barrie, who, in a voice of well modulated sympathy, thus addressed

"Don't take it too hard, old man. Although you are neither a prophet nor the son of a prophet, there is no reason why you shouldn't be the father of one."

In the disorder that ensued the solemn man resumed his seat, and was heard no more that night.

Admiral Hichborn

Admiral's Words Carry Weight. Rear-Admiral Hichborn is one of the

best known officers of our navy. His statements concerning Peruna will have much weight as they go out in the world. What he says is echoed by many other officers of high standing.

What the Admiral Says. Philip Hichborn, Rear-Admiral of the U. S. Navy, Washington, D. C.,

writes:

"After the use of Peruna for a short period, I can now cheerfully recommend your valuable remedy taken in the first stages of the disease to any one who is in need of an in- will be more effective than when the vigorating tonic."-Philip Hichborn disease has become established.

An Ever-Present Foe.

The soldier and the sailor are especially subject to catarrh. In the barracks and on the field, Peruna is found equally efficacious to overcome this physical enemy. If taken in time, it will prevent colds from developing into catarrh. Even after a cold has settled in some organ of the body, Peruna can be relied upon as an efficacious remedy

to promptly overcome it. Peruna will relieve catarrh, whether acute or chronic, but a few doses of it
