advantages.

to come up at all if put in so deep. A better way is to go over the ground with a wheelbarrow seeder after the oats have been disked in and cover the clover seed with the harrow. Most drills have a grass seed attachment which sows the clover broadcast between the rows of small grain. The harrowing which follows drilling will cover the clover seed.

Drilled grain, especially if drilled north and south, is a much better nurse crop than that sown broadcast. The sun gets in between the rows to the little clover plants, and they grow much more rapidly than they do in broadcasted grain. Late grain does not make a satisfactory nurse crop. It stools out too much, and the ground is so dry and hard when it is finally harvested that the spindling clover cannot make much of a growth before winter. A luxuriant fall growth is the best guarantee against winter killfarm which is more necessary ing. Early oats or barley make an or more profitable, all things ideal nurse crop. They do not stool considered, than some legume. out much and are ripe early in July. thus giving the clover several months in which to grow-before it is stopped by freezing weather. The first fall's growth should not be cut or pastured if a crop is wanted the following year. It is needed to hold the snow to protect the tender roots. In the spring the clover field should be examined early to see how it has come through the winter. The stand may need thick-

better pasture. By loosening up the sod in the low corners of the pasture with the disk and sowing four pounds of alsike to the acre its value may be greatly increased. In seeding a field to red clover it is well to scatter a little alsike in the low spots. It will be sure to grow whether the other does or not.

Handling Alfalfa.

What has been said about alfalfa does not mean that it is not to be grown at all except in the drier regions of the west, but that it is to be introduced into new regions carefully and on a small scale. The surest way to get a stand of alfalfa is to fallow the FIG. XVII-BUTTERFLY ON RED CLOVER. land during the spring and early summer. About the middle of July a seed bed may be prepared and the alfalfa seed should be cleaned carefully with sown at the rate of twenty to twentya clover seed grader to remove all weed seeds. If purchased it should be | five pounds to the acre. If the ground examined very carefully to see that it is not too dry a stand will usually be ing will have destroyed most of the the seed is badly shriveled it should be weeds. The objection to this plan is discarded entirely. This matter of testing the germinative strength of seed that no crop is obtained from the land before the regular sowing is made that year.

A more economical way is to start with a crop of early oats or barley. As soon as this is harvested the land should be disked thoroughly and the alfalfa seed sown. If the ground is so dry and hard that the disk will not paign is proved to be capable of fultake hold it will have to be plowed. filling its requirement. The eye is by no means an infallible judge of grain. The main thing is to get the seed in as wife insisted that he take the cure, offered for seed, and a more searching quickly as possible. The chances of securing a stand are much improved

if a thin dressing of manure is given Where clover is sown with timothy about eight pounds of the clover to the land before sowing. After the al falfa once gets a start it is very hardy four of timothy per acre is the proper and a good yielder, giving four to six amount. In a short rotation, however, tons of hay a year. It should be cut when about one-tenth of the plants are in bloom. The second spring a disk ver. Not all of this seed will grow the first year. The outer coat of a clover run over the field will split up the crowns and thicken the stand, discourseed is very hard, and a considerable proportion of it does not soften enough aging the weeds and loosening the soil to sprout the first season. It will come as well.

Too True!

There is a rare bit of pathos in the On light soils, especially if the spring letter written by the late Dr. Edward is dry, the clover may be mixed with Everett Hale to the Tyngsboro, (Mass.) centennial committee in the latter part the oats directly and covered at the of March regretting his inability to attend the celebration.
