Omaha-Where the West is at its Best

CRIME: CAREER OR DISEASE?

Presence of Clarence S. Darrow in Omaha last week excited renewed interest in the crime wave. This is not merely because Mr. Darrow has been identified with so many notable criminal trials as to make his name suggestive of sensational proceedings in and out of court. It is largely because he came as an exponent of a popular theory. It is that tendency to crime is transmitted from sire to son, as naturally as other characteristics pass from parents to progeny. In other words, crime is a congenital disease.

Supporting his argument, Mr. Darrow cites biology as a witness. He calls on the Mendelian law. Stated more simply, the blood stream is individual, as the germ of life is individual. Carried down in succession are the traits of character that will control. Appearing and disappearing, diminishing or swelling, but ever present, these inherited traits will govern. A strong and a weak alternate, as the black and the white chicks recur in the broods. This is the discovery of Mendel, now accepted as law by many biologists.

* * *

Building on this, Mr. Darrow erects a rather imposing superstructure, composed principally of sentiment. Consideration for the natural bent of the individual who is inevitably dedicated and inexorably driven to crime by reason of his birthright, rather than his environment. The law has no right to pursue such a victim of inherited impulses and propensities. Sympathy should be expressed, and assistance be given to the criminal whose wrongdoing arises in response to a law that controls the human race and which proceeds from the source that gave all law to the physical world.

Let us contrast against Mr. Darrow's narrow blood stream the all-inclusive one visioned by Mr.

drawn against the New York theater of the day that there is small wonder it feels something should be done.

We have often expressed mildly enough a view that the rapacity of the managers, their unwillingness to cater to any but the casual, and the forcing of "stars" were bringing the theater to a low state. It is for the managers to reform the stage, but it will be a long time before it will be restored to that place in public esteem and confidence in which it was established by the line of producers and directors from Augustin Daly to Charles Frohman.

OMAHA AND KANSAS CITY.

From what can be learned of the negotiations of Sears-Roebuck & Co., Omaha business leaders really didn't have a chance to submit the advantages of this city as a site for their new branch plant. Representatives of the big firm came to Omaha some weeks ago it seems, conferred with railroad officials and then went to Kansas City, where negotiations were continued, largely with the same railroad officials. Result, the branch plant with its investment in ground and buildings of some \$4,000,000 and a pay roll of 3,000 employes, goes to that city.

There is one outstanding difference between the two cities. In Kansas City the business men are in the habit of going after the big propositions. They are lined up with facts and figures, trade surveys, industrial surveys, buying possibilities. In Omaha we have either lost the habit of going after the big things in a big way, or we have not yet developed it.

The success of the American Legion convention shows that it can be done. We will get into our stride some day. The opportunity before the Greater Omah: Committee is a splendid opportunity.

FIRST STEPS IN CITIZENSHIP.

A little study of the demand of the municipal judges for dignity in the police court will disclose many reasons why the judges should be supported. Frequently the police magistrate is the only judge with whom an alien ever comes into contact. Generally he is the first. This fact arises from a very simple condition. The alien is unaccustomed to American ways, knows little if anything of the laws or city regulations, and is quite liable to be guilty of some minor infraction of one or the other.

A deplorable fact now comes in. Following the arrest the culprit is visited by a "wise" member of his race, who dilates to him on the enormity of the offense committed. It may be trivial, and in the Old Country one that would not be noticed. But the victim is reminded that he is in a new land, and its laws are not those of the old home. However, there is a way out. Money always talks big in America, in fact its voice is nearly the only one ever heard. If the culprit will supply the needful, say \$100, or \$300, os some other such sum, the "wise" man can fix everything. He will employ a lawyer, will fee the judge, pay the policeman, and an enormous offense will be blinked at in the court.

When the all-but innocent alien comes into court, he sees his able friend who introduces him to an attorney. Presently the attorney, who has been employed by the "fixer," and who probably knows nothing of the bargain, goes to the judge and may whisper something to him. The fixer gives the policeman a cigar, and the hearing is had in due time. The lawyer explains the matter to the judge, who generally dismisses the culprit with an admonition.

The latter leaves the court, satisfied of the corruption that prevails, for has he not just bought his way out of a serious plight? It is to break down such practices that the judges are trying to make

The particular concern of the ento- per.

Speaking personally, and voicing nobody's opinion but our own, we opine that banquets these days are usually very dry and tame affairs. Not even when we are listed among the speakers do we differ from the opinion here expressed. In the first place, banquet orators are born, not made. In the sec place, banquet listeners are no longer put into the proper frame of mind to sit and listen to addresses. The "we have with us" wheeze is more or less tiresome, and comparatively few speakers are adequately equipped with terminal facilities. When we sit at a banquet table and pick up the toast list to discover that there are seven or eleven speakers, we feel sad and de-pressed, and no longer is it possible to obtain the reviving es-

Commend us to the Ad-Sell league, where there is only one speaker, and he is notified that & o'clock must see him finished. Real toastmasters are even scarcer than banquet orators. Unless something is done to permit a revival, banquets will soon be listed among the things that were.

Mark Sullivan is one of the most noted newspaper men in America, and usually reliable. Recently he wrote an article about the states and their indebtedness, and therein he made the statement that in 1913 Vermont was the only state that had no bonded debt. Of course Mark was mistaken. We don't know a blooming thing about Vermont except that it is Presi-dent Coolidge's native state, but we do know that Nebraška has not had a dollar of bonded state indebtedness since 1875.

We hung on the fringes of the crowds attending the reception to the new governor. Of late years we have grown some-what obese and the "soup and fish" that once graced our sylphlike form now fails to meet in some essential places. Hence we studiously remained in the background. But we noticed that the "Hereford suits," as our old friend, Colonel Coffey of Chadron calls them, were not as numerous as in the old days. We regret that this is so. If there is one thing we abhor more than another, speaking sartorially, it is the abomination known as a Tuxedo, or bob-tailed dinner coat. Notoriously careless in dress support as a Tuxedo, or bob-tailed dinner coat. Notoriously careless in dress ourself, we demand due attention to the nicetles in others.

When Governor McMullen is reinaugurated we are going to attend the reception, clad in a dress suit. We shall do this regardless of whether our finances permit the purchase of a new outfit. In case of financial shortage, which is more than probable, we shall get into the old dress suit if we have to don a corset and then insert our portly form by means of a shoe-

During the inaugural ceremonies men and women were packed into the lobby of the house, of representatives like sardines in a can. They stood for two hours without a com-plaint. If they had to stand packed in a street car like that for ten minutes their complaints would, if placed end to end. reach from here to there. Men and women are peculiar creatures.

Far be it from us to knock. We like Lincoln. It was our home for 15 happy years. But for a capital city, and one of the largest in the country, it has the poorest street illumination of any. There are more missing letters in the electric signs than there are lighted ones. Lincoln people have one glaring fault—they like to make slurr ng remarks about Omaha. But Omaha wouldn't stand for the sloppy streets that Lincoln endures without seeming protest. Onaha may be somewhat lacking in street railway facilities, but Omaha has a service par excellence compared with that of the capital city.

A fine lot of people, these Lincolnites. Hospitable and courteous. But they take as a personal affront any criticism of any one of the state institutions located here. They are, in the opinion of the average Lincolnite, peculiarly Lincoln institutions in which the state has no other part than to put up the money. This may sound like a harsh criticism, but it is a fact, just the same. But that is the frame of mind of the people of most cities that are dependent very largely upon political favor. WILL M. MAUPIN.

Higher Education

Omaha .- To the Editor of The From the New York Times.

the harm it works on the pocketbook.

es so, from mine to consumer, under

by grains of corn on the cob. Every

. . .

A seed bed to receive the seed and tion in a cricket. A seed bed to receive the seed and develop the plants therein sprouted at one and the same time is imprac-tical. The plants must be developed outside of the plant bed (the college) by practical usage—transplanted as it were into the school of life." It seems or clicks? which these creatures make and have made at least since the

H. G. Wells. According to Wells, instead of man's ancestry being exclusive, it is the most widely scattered that could be imagined. He points out that each individual has two parents, four grandparents, eight great-grandparents, and proceeded by arithmetical progression, he discovers that forty generations back, the man living today has had more than 1,400,000,000 ancestors. Or, as he expresses it more graphically, the individual today has all the people who lived in the world a thousand years ago, for ancestors.

Individual though we may be, and endowed with the free will that is the heritage of all men, to which Mr. Wells adheres emphatically, we are all kin. Racial divisions, whether of language, color, geography, all dissolve in this common blood stream. Accept that, and the Darrow thought of transmission of criminal tendency is either immeasurably heightened, or it vanishes entirely.

Ethnologists smile at Mr. Wells' rather naive demonstration of commonality of origin, just as biologists are not quite ready to accept Mr. Darrow's dogma, however he may impress it on judge or jury. In the Gospel of St. Luke we find seventyfive ancestors named from Adam to Joseph to indicate the descent of Jesus Christ from the first man. If forty generations imply almost a billion and a half of progenitors, the continuity of descent through seventy-five necessitates an exclusiveness the other mplicitly denies.

. . .

This is not to decide that mooted point. Merely to exhibit the wide difference between the thoughts of men. Following either far enough, the simple mind becomes confused, and is ready to take refuge in the old dogma, that "man is conceived in sin and born in iniquity." Until more definite and conclusive knowledge is attained, it will serve to deal with the criminal possessed of free will, and responsible for his acts. If all men be kin, the fact is not fully admitted, save as descent may be traced back to a single or to the myriads of ancestors, whichever route is followed. And the sentimental sympathy lavished upon offenders against society might without harm be shared with society, as being the party most harmed by the crime, whatever it be.

"THE PLAY'S THE THING."

A few days ago two of America's greatest imported songbirds broadcasted a concert. Whereupon William A. Brady, most vocal if not most important of the New York managers, expostulated. Such proceedings would be the death of the theater. Folks will not pay to hear performers in a hall when they can get such artists out of the air by the simple process of tuning in.

Mr. Brady's protests have focussed attention a little more narrowly on the theater. Mr. Percy Hammond, who serves The Omaha Bee so entertainingly with news and gossip of the stage in New York, tells us today that Mr. Brady admits he might have been just a little narrow. It seems that quite a few other reasons have been cited for the decay of the popularity of the theater in New York.

One is that \$5.50 is charged for a single seat at a comedy that is merely good and not remarkable. either for its literary quality or the capacity of the company that performs in it. Another is that the theaters are uncomfortable, crowded and poorly vensilated. A more potent reason is that plays generally are bad, and frequently of a sort that should not be permitted. In general, such an indictment is rules that will impress the visitor, foreign born or native, to understand the sanctity of justice. Dignity is always expected in the atmosphere of a court, and no magistrate should possess more of it than he who is most in contact with the people who need the lesson it will impart.

HE COULDN'T STAND PROSPERITY.

We have the case of a young man who won \$20,000 in a prize contest. Conservatively invested, that amount of money would have brought him \$1,000 a year. To one who has worked hard, and who was just getting established, such a sum would he a welcome addition to his income. This young man had other ideas, though. He broke up his home in the little town where he lived and moved to a city. His first purchase was a big car. He went on from one thing to another, until finally his wife brought suit. Reconciliation followed, but in the meantime the prize money was spent.

Now, he curses the money, and expresses the wish he had never seen it. Both times he is wrong. and has no one to blame but himself. He merely let the possession of a considerable sum of cash turn his head. Forgetting the use of money, he turned to its abuse. Instead of applying it to the purchase of comfort, he went in for luxuries.

This youth is not the first of his kind, nor will he be the last. Sudden possession of riches, or what looks like riches, has been the destruction of many a mortal. Some folks can not stand prosperity, and fail to realize the meaning of what Solomon said. "Wealth gotten by vanity shall diminish: but he that gathereth by labor shall increase." Wealth is a blessing or a curse, just as it is used. And the man who is foolish should not blame the money that he has wasted in folly, and in this connection it might be well to consider the communists who want to "divide up."

LOOKING AHEAD.

Charles W. Bryan will seek the democratic nomiration for governor in 1926. He has so announced by indirection. His budget message declares it in unmistakable terms, and his retiring message emphasizes the declaration.

He recommends that the McMullen administration be limited to an expenditure of \$17,000,000. while his own administration asked for upwards of \$22,000,000. Two years from now he will start out campaigning and point with holy horror to "republican extravagance," proving it by showing that he could have run things for \$17,000,000, as he recommended. The fact that he could do nothing of the kind, and knows he could do nothing of the kind, will not limit him in his declarations.

Mussolini's forty-eight-hour pacification period did not get results, but the "black shirts" still hold the top hand. "Sunny Italy" is having a high grade political campaign.

Something wrong when a criminal case can be postponed two years by transferring it from the state to the federal courts. No sign of speedy justice there.

France and England are said to have agreed on the debt situation. Uncle Sam is also agreed. He would like to have some of them to pay.

Maybe Henry Beal was not joking after all, even the men he has accused persist in trying to think so

"There stands Massachusetts," a little bit shaken. but still at attention.

hen that a lot of the higher educa ion theories are not as represented. one can get an elementary training n a number of things in a four-yea college course, which may and may not lead to a "higher education." We usually spend four years learning one trade; it is obvious then that we could not learn a number of "trades" in four years at college. The best we can do is to get a general idea of how start in to get an education. olgate university would have only those students who passed a certain mark. It should not be difficult to out the ones who would provide the best material for the higher cir-

of learning. Usually a high school student will show signs of what he is adapted for in the scheme of

Certainly a college course would not be amiss for many, but is it prac-tical or worth while to spend four years at something that will perhaps that it is not right that singers should be of little value in after life? Leav. perish by singers' mouths. ng out the aesthetic side of the ques-

themselves into round holes, and a lot of this can be laid to education, the singer. turn to and take special courses in

or they did not a few years ago, and it appears that all colleges these days are turning more and more to th eaching of vocational pursuits. Comparing French universities with merican institutions, Paul Van American institutions, Paul Dyke, Harvard university lecturer, says: "First, what is known as col-says: "First, what is known as colof our universities, is a very beautiful thing, exists in so much feebler degree in French universities that draws nobody to them for that alone Whereas, the curse of our American institutions of learning is the number of lads entering them who have no desire in regard to learning except to avoid as much labor as possible in order to devote as much time as pos-sible to what they believe to be 'col institutions of learning is the number sible to what they believe to be 'col-lege life.' Their inexperience hides from them that college draws all its most subtle charms from the fact that it is the life of students; otherwise it degenerates and becomes as banal as the life of any gang or set of people inywhere. The necessity of convert ng these foolish lads, or eliminating incorrigibles, is the chief reaso why the first two years of most of our olleges and universities do not cour for more than they do toward the task of training good citizens with cultivated minds." This sort of knocks the glamor off

the values of a college education when one has to believe that the first two years are mostly wasted in the attempt to make young fools into sensible citizens. The best school in existence to knock the "fool" spots out of the young fellow is the school of life. It seems to be the opinion-rather late in coming-that the func tion of the university is to train only the genius and talent in the higher education, and that, I think, is right C. S. FREDERICK.
