Reading, writing and arithmetic aren't the only subjects in the curriculum of the Technical high school girls. Here we have Marjorie Emely, Gladys Pease and Gunette Hurwitz showing they are quite as proficient at physical exercises as well as mental ones. Photo by Dewell.

Turning night into day for the air mail pilot. These remarkable photographs show the operation of the lighting system at Fort Crook field. The upper picture shows the huge searchlight which cuts into the blackness of midnight and guides the flyer to the landing field. Some idea of the power of this searchlight is shown by the flash of the light on the small house at the extreme left of the photograph. This house is three-quarters of a mile from the searchlight. The small lights along the path of the searchlight are small boundary lights. The mail flyer manipulates his plane to touch ground in that part of the field between two rows of these boundary lights. The lower picture shows the same scene with the field flood light coming on. As the pilot approaches the landing field this flood light is turned on and as its blanket of light illuminates the field the big searchlight is shut off. The searchlight is so powerful it would blind the pilot should he get directly in its path. Photos by Dewell.

This chorus of 250 voices is preparing for the rendition of Handel's oratorio of the "Messiah" at a spring musical festival to be given at Fremont early in April. The Fremont Chamber of Commerce hopes to make the Messiah chorus which is sponsored by Midland college, an annual affair. Dr. J. F. Krueger, president of Midland, and Prof. T. Amos Jones, director of the chorus, are in the foreground.
