BIG SLUMP IN ROCK ISLAND

Common Stock Sells Down to Nine and Five-Eighths.

COLLATERAL BONDS ALSO YIELD

Bankers Say Details of Proposed Reorganisation Scheme Have Not Been Worked Out-Stockholders in Panie.

NEW YORK, Feb. 2.-Rock Island comon and preferred, and Chicago, Rock sland & Pacific railway collateral & per cent bords were the features of weakness of today's market. The Rock Island leaues went to new low levels in connection with recent rumors of readjustment or reorganization of the Rock Island system. Rock Island common sold down to 9%, as compared with 13% at Saturday's close and the preferred lost 4% points, seiling at 14%. The collateral bands yielded almost 2 points.

Interests identified with the Rock Island system would add nothing to recent reports to the effect that abolition of the Eack Island company of New Jersey and the Chicago, Rock Island & Pacific company of Iowa is contemplated. The bankers representing the company intimate that some reorganization is being considered, but they say that the details have not yet been worked out.

Rock Island issues continued feverish throughout the session, the common falling lower than in the morning. In the (inal dealings some recovery was shown in the preferred stock and collateral bends. Dealing in Rock Island constituted about 15 per cent of the whole, an unusually large output for these stocks.

Inquiry Into New Haven. WASHINGTON, Feb. 2.-Senater Norris, republican, Nebraska, said today he expected to introduce this week a resoon directing a special inquiry into the financial operations of the New York, New Haven & Hartford railroad. He has had in mind for some time such an investigation, but delayed pressing it while officials of the railroad and the attorney general were negotiating.

WORKING WOMEN GET NO ENCOURAGEMENT AT THE WHITE HOUSE

KIDNEYS OFTEN OVERWORKED

When Diseased the Whole System Be-

The bowels, the kidneys, the skin and

the lungs carry off the waste material

from the human body. The bowels re

move the non-nutritive material after di-

gestion is completed, and the lungs carry

off the carbonic acid gas. The skin,

through its porce, gives exit to water,

the saline matter and some gaseous ex-

halations. To the kidneys, which are a

marvellous combination of delicately con

structed tubules, is given the most dell-

the waste matter from the blood, and any

failure in the normal work of these or-

gans, means a retention in the system o

polsonous and aerid substances that usu

in uramic polsoning or heart failure
