ANNUAL HARVEST SALE

"When the frost is on the pumpkin And the corn is in the shock."

Harvest Time for the Provident and Thrifty

A SALE planned to interest the out-of-town as well as the city folks, for, after all, THIS STORE is YOUR STORE, whether you live in town or the country. A great harvesting of seasonable, wantable merchandise for home and personal needs at prices that go a long way in reducing the high costs of living to a minimum. An event planned to help you to get ready for the cold weather that's just around the corner.

BE SURE TO SEE All of our show windows on 16th street, as well as the main floor of the store have been specially decorated for the occasion. OUR WINDOWS To gaze in any of the windows you can't help but think you are out in the country. Everything is so real and true to nature. The winding country roads with corn fields on either side away into the distance, but come see for yourself. Well worth a trip to town.

Hallowe'en Novelties

At our stationery section you'll find a generous selection of Hallowe'en novelties. Many new creations shown for the first time. The prices as usual are the lowest.

ORKIN BROTHERS

CORSET Demonstration on Living Models Every Afternoon, 2 to 4

The Perfect Figure of Today The Result of Warner Corsets

THE perfect tailored figure, says Fashion, is long and straight, with only the slightest of curves at the hips. But, careful! Not a hint of stiffness, or rigidity or the entire beauty of line is marred!

This combination of perfect figure-control and perfect ease marks what our customers call "the Warner figure"—the ideally graceful, supple line every woman may enjoy who wears a carefully fitted Warner Corset.

The new winter models outmatch for beauty any we've ever before shown you. Every stitch guaranteed—even to their "Security" Hose Supporters.

Price, \$1.00 to \$8.00

Every pair full size and guaranteed strictly perfect. If you have a curtain need, we advise early selection, for at this price they'll go out like the proverbial "hot cakes." Values to \$2.50, your choice of the lot for, pair 69c

FATHER TIME ON WIRELESS

Signals Flashed from Washington for Regulation of Clocks.

WIRELESS STATION IN ACTION

Service Desirable from Standpoint of Accuracy—Swing of Pendulum Makes the Circuit.

At the instant of noon in Washington the wireless station at Arlington, just across the Potomac, which is the most powerful in the world, hammers out its towers a time signal that goes off into the void, to be picked up at Chicago, Galveston, San Francisco and many other points. The flash of it regulates many a jeweler's clock, bringing the hands into an instant adjustment of correct time. For an old sidereal timepiece, about which is built a great scientific institution, is back of that flash, and the time of its sending is determined by the reading of the stars, the only absolute accurate way of telling the time of day.

Formerly the moon-time signal sent out from the naval observatory at Washington was distributed only over the commercial telegraph lines, but on the pet-

tion of jewelers throughout the country the Navy department consented to give for this purpose the use of the mammoth Arlington station.

Accuracy Assured.

According to officials of the naval observatory, an apparatus suitable for receiving the wireless time signal sent out from Arlington, can be purchased for less than \$100, whereas the regular annual rate paid under the old arrangement by jewelers and other persons to whom the correct measurement of time is of vital importance, averaged about \$89 per year. The advantages of the new method over the old are so obvious that it is estimated that 10,000 clocks in all parts of the country will soon be regulated by wireless.

The wireless service is most desirable from the standpoint of accuracy. It is acknowledged even by enemies of the new system that it is far ahead of the old in this respect. According to scientists at the naval observatory who have conducted an exhaustive series of experiments along this line, only one-twentieth of a second is lost in transmission between the Arlington station and San Francisco via wireless. It was on the ground that the time signal was subject to many delays during transmission over the regular commercial telegraph wires that the plea of the American jewelers

for wireless service was based. A system of national scope is the result.

"Father Time"

From the great sidereal clock in the naval observatory—a veritable "father time"—the time signal is originally derived, and this clock is regulated, in turn, by means of an electrical device operated automatically from a similar timepiece installed in the vault of the astronomical observatory. Each night the government astronomers study the stars, which are the final and ultimate source of all terrestrial time, and from their observations they are able to regulate exactly the primary sidereal clock in the vault which automatically passes on the correct time to the second clock installed in the sending room of the observatory. Two other clocks, less imposing but almost as accurate as the sidereal chronometer, fitted with electrical contact points on the hands, receive the time from the second sidereal clock, and actually place the signal on the wires when the switch is thrown at five minutes to noon and five minutes to 10 o'clock at night. So short is the distance between Arlington and the naval observatory that the signal is sent this far on its journey over an ordinary telegraph wire, and is then relayed through the great "sending" apparatus to the wireless station to every corner of the United States.

Each day at five minutes before the designated signal hours, the electric switch is thrown and the "contact" clocks are placed in action. These chronometers in tolling off the seconds complete the circuit with every swing of the pendulum and send a spark along the wire to Arlington, where it is literally shoved off into space through the antennas of the wireless masts. Thus does it become possible for the liner in the middle Atlantic or the farmer's boy in Kansas who has an experimental apparatus, to catch the tick of the official time clock at Washington. In the preliminary signaling every second is marked by a "dot" except the twenty-ninth, fifty-sixth, fifty-seventh, fifty-eighth, and fifty-ninth, which are left blank in each of the five minutes. After the divisions of the five minutes before the hour, comes the flash of the exact hour.—Technical World Magazine.

Metal Soles for Farm Shoes.

Shoes with aluminum soles are now made for farmers and laborers who are required to work in water or on damp floors. The top of the shoe is of leather and the sole is a continuous piece of aluminum which covers the entire bottom and folds up along the sides. Between the foot and the metal is a heavy felt insole, and the heel has a core of wood to decrease its weight. Lack of flexibility in the sole is made up for by a bar under the ball of the foot, which gives a buoyant roll to the step and prevents flat-

AMAZING MYSTERY OF THE SEA

What Became of Ship's Passengers and Crew an Unsolved Riddle.

The most curious of all sea stories, in fact, one of the most amazing mysteries in history, is that of the ship Maria Celeste, which sailed some years ago from Boston to the Mediterranean with thirteen persons on board, including the captain's wife and little daughter. Just when the ship was beginning to be regarded as missing it was found 100 miles west of Gibraltar. The sea was as calm as a mill pond. Every sail was set, but there was not a living soul on board. It was found to be perfectly water tight and with ample stores. The log showed that it had met excellent weather all the way across.

In the cabin a half finished meal was on the table, with the chairs slightly pushed back. The captain had evidently just knocked the top off a boiled egg when he suddenly left the room forever.

A nightgown for the little girl was on the sewing machine, with the sleeve half sewn. The crew's quarters showed no sign of a struggle, either, only of a departure so swift that everybody had left the ship in the clothes he stood up in.

Diré Distress.

"Excuse me, Wombat," said the well-dressed one, "but personal friendship prompts me to speak." "What is it, old chap?" "I fear that, unless you improve your personal appearance, you may lose your job." "I hope not." "You need a new hat." "Um." "You need a new suit." "Um." "You need shoes. Man alive, your feet are on the ground!" "Quite true," admitted Wombat, with a sigh. "Then take this week's salary and spruce up." "Can't squander any money on myself, old man. My wife is worse off than I am." "Dear me! How is that?" "She needs a new feather in her hat."

At first it was rumored that blood had been found on the ship's side and on the captain's outlaws. But why anyone who used a cutlass should hang it up again neatly on its nail was not explained. And scientific evidence proved the stains to be only rust.—Toronto Mail and Empire.

Diré Distress.

"Excuse me, Wombat," said the well-dressed one, "but personal friendship prompts me to speak." "What is it, old chap?" "I fear that, unless you improve your personal appearance, you may lose your job." "I hope not." "You need a new hat." "Um." "You need a new suit." "Um." "You need shoes. Man alive, your feet are on the ground!" "Quite true," admitted Wombat, with a sigh. "Then take this week's salary and spruce up." "Can't squander any money on myself, old man. My wife is worse off than I am." "Dear me! How is that?" "She needs a new feather in her hat."
