POSSIBLE PARENTS THAT EUGENIC BABY Remarkable Evidences of Deep Personal Interest in the New Plan of Science to Create a Better and Finer Race

Miss Estelle M-, Monroe, La.

Miss Adda Z-, Carlisle, Pa.

MISS MARTHAW- CANTONOHIO

W. Nordberg, Lynn, Mass-

Miss Della L-, New York.

HARMING young women and handsome men show an increasing desire to marry in accordance with the great aim of eugenic science, which is to produce a better race.

The announcement has already been made in these columns that a committee of leading doctors and social workers, represented by the Medical Review of Reviews of New York, has offered prizes to the ideal eugenic man and woman. A prize of \$500 will be given to the ideal man and woman when they marry and a second prize of \$500 when their first child is

This newspaper will be pleased to receive photographs from any of its men and women readers who wish to compete for these prizes. A few of the many photographs already sent in are printed on this page. In order to avoid inconvenient publicity, the full names of the women candidates are not printed.

Candidates should state their general physical measurements, weight, height, age, condition of health, health of their parents and grandparents. The candidates should be young and perfectly healthy. Photographs and information will be turned over to the committee of scientists who will select the successful candidates and award the prizes.

The committee regrets that it is impossible to re-

turn any photographs.

The object of eugenic science is to lead men and women to marry only those of good health and sound ancestry, in order that the feeble-minded and sickly people who now burden society may cease to exist in future generations. A great mass of facts has now been collected, upon which the new eugenic science

A very interesting object lesson in eugenics, involv ing the most important families in history and breeding of a favorite domestic animal, is furnished by comparing "the Hapsburg lip" and the undershot lower jaw of the English bulldog. This is a lesson dargely in mistakes to avoid.

Both peculiarities are similar in appearance, both originated in a defect that was mistakenly admired and both have been perpetuated in the same way, i. e.,

by inbreeding.

The Hapsburg lip is the most remarkable and famous hereditary peculiarity in the world. It is found in nearly everybody belonging to the imperial family of Austria and the royal house of Spain. has been seen in the monarchs of leading countries of Europe for about six hundred years. A history of the Hapsburg lip would be a history of Europe for six Owing to the frequency of marriages between the Hapsburgs and the ancient French house of Bourbon, the Hapsburg lip is almost as common among the Bourbons as among the family that first produced it. The Bourbons have also their own hereditary peculiarity, "the Bourbon nose," which has already been referred to here.

The Hapsburg peculiarity is a large, swollen pro-jecting underlip. It is usually, associated with a long bnormally heavy and prominent lower jaw, which

helps to make the lip more conspicuous. The first appearance of the lip, according to history, was in a princess named Cymburga, who was born in the latter part of the fourteenth century, and married Ernest, Duke of Austria, who became the ancestor of all the imperial Hapsburgs.

Frederick Adams Woods, instructor in the Harvard Medical School, who has written a very interesting work called "Heredity in Royalty," has tabulated the names of thirty members of the imperial house of Austria, Iwenty-three members of the royal family of Spain and nine members of other royal houses who have possessed the Hapsburg lip. He gives authentic portraits of all of them in proof of his statement. He traces it through eighteen generations.

Through the marriage of Philip the Handsome, of Austria, and the mad Joanna, of Spain, daughter of Queen Isabella, the patron of Columbus, the Spanish dominions fell to the House of Austria. The old Spanish house of Leon and Castile then became extinct in the male line and the child of this marriage became Emperor of Germany and King of Spain, with all the vast American and Asiatic possessions of the

This child was the famous Emperor Charles V., who reigned from 1516 to 1556. He possessed the Hapsburg lip in a very marked degree. He married Isabella of Portugal, who was closely related to him. Her mother was a sister of the mad Joanna and granddaughter of John, the imbecile, and Isabella, the insane. The Emperor Charles V., although a man of considerable ability, became a melancholiac toward the end of his reign and abdicated his vast possessions.

The Hapsburg lip and the mental defects that accompanied it were multiplied and intensified by the constant intermarriage of members of the family. The Hapsburgs were proud of the lip and they were pleased to contract marriages that would perpetuate it. Here we see a close parallel between the history

of the Hapsburg lip and the undershot jaw of the English bulldog. Breeders have persistently bred from dogs of this exaggerated type because it had come into fashion, although the undershot faw is really a mark of degeneracy from the original buildog breed. In the same way the Hapsburgs excited a false kind of admiration for their peculiar lip and con-tinued to reproduce it, although it is a mark of the physical and mental degeneracy of the race.

We know that the Spanish Hapsburgs rapidly de-generated after the time of Charles V., while the country lost its power and possessions. The branch that occupied the Austrian throne was but little less remarkable for feeble-minded rulers.

The Spanish kings of the eighteenth century became mere caricatures of humanity, strange, withered creatures, who wore splendid clothes and gibbered aim-The last king of the direct Hapsburg line was Charles II., who died in 1700. Very appropriately he had the most conspicuous Hapsburg lip and undershot jaw of the whole line. The historian Buckle, in his 'History of Civilization," says of him:

'His general appearance was absolutely revolting and was that of a drivelling idiot. To an enormous mouth he added a nether lip protruding so hideously

First Recorded Bulldog with Undershot Jaw. From a Print of 1625.

that his teeth could never meet and he was unable to masticate his food." Charles's daughter married the grandson of Louis XIV. of France, and this grandson became King of Spain as Philip V. This marriage started the Bourbon-Hapsburg line in Spain. It also started what Professor Woods calls "the frightful Bourbon-Hapsburg psycho-neurosis." The Bourbon-Hapsburgs showed the old lip and the same mental feebleness. Their incapacity during the Napoleonic invasion of Spain and

the revolt of their American colonies is historic. The present King Alfonso XIII, of Spain, shows the Hapsburg lip in an extraordinary degree. He is a Bourbon-Hapsburg on his father's side and a Hapsburg on his mother's side. Nearly all his immediate ancestors have shown the family defects in a marked degree. His grandmother, Queen Isabella, was no-torious and his father, Alfonso XII., was a dissipated

Alfonso's apparently good character must be regarded as the result of an improved environment and good mother's influence. Nevertheless, the family defects have descended to his poor children in a painful degree. Two of them, as the whole world now knows, are deaf. They also have the Hapsburg lip.

King Alfonso evidently sought to eliminate the family defects by marrying a wife of fine physique. Queen Victoria's grandfather, a prince of Hesse, married a girl of sound plebeian German stock. Queen Victoria shows all the evidence of this sound stock in her appearance. Nevertheless, her heredity cannot be considered entirely sound, as she is partly descended from the Hanoverian Guelphs and the ruling family of Hesse, who have shown many grave defects and frequent cases of insanity.

In union with a husband of very defective ancestry, these defects are liable to crop out. To the sound German element in Queen Victoria's ancestry must be attributed the fact that three of her five children are well and strong.

Eugenic science teaches that if the kings of Spain would marry wives of perfectly sound ancestry for two or three generations to come, the terrible family weaknesses would entirely disappear.

Now we come to the extraordinary parallel between the buildog jaw and the Hapsburg lip. In old days when buil baiting was a favorite public amusement, there existed a very powerful heavy-jawed race of dogs used in fighting the bulls. A buildog of this kind may be compared to the early Hapsburg, who was known as "Ernest the Ironjawed." Frequently a pup or two in a litter of this old breed would be born with lower teeth and jaw projecting beyond the upper. This was

really a mark of degeneracy, like cieft palate.

About the time bull baiting ceased to be a popula amusement, the type of bulldog with undershot jaw became fashionable as pets in England. The breeders raised pups only from these degenerate specimens, killing the good pups or letting them run loose, and thus created the type we call the English buildog.

Scientists reject the popular idea that this type could have been created artificially by pushing in the

The original type of buildog is still preserved in the French breed, called the "dogue de Bordeaux." This animal is more powerful and intelligent than the Eng-It is interesting to note that in the Bordeaux breed a pup is frequently born with an undershot jaw, but in this case it is considered a fault. Professor V. Galippe, of the French Academy of Medicine, who has made a profound study of the bulldog jaw and the degeneracy of royal families, has discovered the oldest known picture of a buildog with the undershot jaw. It bears the date 1625 and was made at Burgos, Spain. Curious to say this was about the time the Spanish Hapsburgs were showing signs of great degeneracy.

Many people naturally admire the English bulldog for its courage, tenacity and good, reliable temper Nevertheless, there is abundant evidence that its extraordinary peculiarities are marks of degeneracy. Owing to the undershot jaw the teeth become loose and fall out prematurely.

The bulldog has more delicate health and more Copyright, 1913, by the Star Comnany. Great Britain Rights Reserved

dog is as badly off as a child with adenoids. All these facts are of great interest and importance to eugenic science. They show that a defect may follows the same hereditary course of development in dogs as in man. It is much easier to study dogs, because they do not live as long as men and it is easier

to control their actions. Then the experience of King Alfonso is very interesting as showing how far marriage with a wife of fine physique is likely to eliminate grave defects from the father's heredity. The results cannot be re-garded as altogether happy. Nevertheless, Professor C. B. Davenport, of the Carnegie Institution, would claim that the results strongly confirm his rule that the marriage of defectives with normal persons leads to a gradual elimination of the defects. He would probably regard Alfonso's three normal children out

of five as a victory for eugenic science. One of the most important points of dispute in eugenic science is involved here. There is much disagreement among eugenists as to how the science should be applied in regulating marriages. Some bold

the Lip Very Plainly. that we should aim merely to increase the proportion of normal persons by preventing the very unfit from reproducing themselves. Others hold that eugenics should aim to create higher types of humanity by mating the finest specimens of men and women with one another. In the project of the New York scientists, announced in these columns, the object is to create fine types of humanity by mating perfect

What the Stars Promise for December

HE December lunation is one that has much to do with governments, munfcipal, national and international. The royal sign Leo rises, which bespeaks prestige for Washington, the City Hall, and executive chambers in the east, although the convening of Congress and of various legislatures will bring all sorts of initial obstruction. Committees and chairmanships are confronted with problems that do not right themselves till the legislative machinery is well under way. new regime must necessarily take time to adjust itself to incoming developments, and Jupiter now in the seat of the high and mighty is its instrument of perfectionment.

But temporarily old Saturn sits rather ominously in this quarter of the monthly chart, and the membership of same will be depleted by one or more prominent deaths. or by absence through illness.

The Navy benefits, and the battleship programme looks very encouraging. Jupiter ruling, this likewise protects the public health, except in a few instances of peculiar hospital cases. A most disturbed condition surrounds the hospital and penal branches of the public service. Investigations will disclose some interesting cases of corruption in

these departments. Sudden reactions in the stock market will mark the period, at times of a panicky nature, again merely sagging and depressive. Lower quotations will prove the rule, and operators would best get under cover.

The military branch of the government is under a cloud, with a woeful condition of de-lay and inefficiency attaching thereto. Uranus disturbs diplomatic relationships, as will be attested by at least one critical instance. The Mexican situation grows more complex.

There is a succession of major aspects in this month, of the nature of blizzard breeders in northern latitudes, and of excessive rains and freshets in the southern territory. This will be noted particularly near the 7th and between the 16th and 23rd. About the 20th

there will also be atmospheric disturbances. The belligerent Mars occupies the eastern angle for the Middle States, tending much to labor troubles near the 85th parallel. lanta, Louisville and Cincinnati will feel this. But schools and educational institutions will benefit, and unusual dramatic interest is in

evidence. The latter extends all the way from Chicago to New Orleans and adjacent

territory. Saturn rises on the western coast, temporarily obstructive to public movements, and will produce some difficulties in the World's Fair preparations. The money inter-tests are jeopardized for that locality, and peculations of serious nature will come to the surface. Health is much benefited and the
