GOSPEL OF RIGHT LIVING

Practiced as Preached Averts Danger of Incurable Disease.

PRIMAL CAUSE OF CANCER

The Light of a New Day Breaking the Clouds of Ignorance—The Wrong and Right Way.

By DR. L. A. MERRILL.

Cancer is a general term usually employed to designate a malignant neoplasm.

Cancer has been for years and is to-day the preeminent of the medical profession. Twenty-seven years ago, in an article presented to the Nebraska State Medical Society at Lincoln, on "What is Disease?" I said: "Some degeneration in tissue, all disease is some form of degeneration, and often, if not always, a generation of structures and function to, or towards, the embryonic condition."

"The ordinary elements of a disease are derived from the pre-existing cells of the organism and before one tissue can be transformed into another, it must first return to the embryonic, or protoplasmic condition."

"Now, since it is a fact that in the repair of broken bones, severed nerves, muscles or tissues of any kind, repair does not take place until the severed ends or tissue have returned to a similar type of tissue whose protoplasmic cells are in place, it is fair to infer that in neoplasms the normal cells of the part have first undergone change from a higher to a lower type of tissue, and when a certain stage of embryonic tissue

"A Poisoned Blood Stream."

(See New York Medical Journal, Aug. 21, 1913.)

The chemical or electrical decomposition or imperfect digestion of protein material of foods, which are essentially meats, produces most virulent and dangerous poisons as cholera and marasmus. The blood stream, being saturated with chemical poisons from excess of foods, loses to a large extent its ability to carry the oxidizing substance (oxygen) to the tissues and cannot, in this impaired condition, return waste products from the tissues to the eliminative organs and thus is produced a failure of various functions, and the induction of regression in various tissues. Physicians make too much out of the "germ theory of disease" and too little out of the chemical and electrical changes in the tissues of the body. "A poisoned blood stream" tells the cause of cancer.

Chemical Poisons.

The early and thorough removal of the chemical poisons and influences, that have poisoned the blood stream and demoralized the constituents of the cell, seems to us to be the only way to prevent, or cure cancer. This is to be done by teaching the people the essential laws, principles and rules of right living. It is no secret, it was to perform an early operation and remove the cancerous growth in all cases, for the people have not been instructed how to live to prevent cancer, but when the operation has been done, the physician should proceed in detail to teach the patient the essentials of right thinking and right living, to keep the blood stream and tissues free and clear from accumulating debris.

My frequent attempts for several years to awaken the profession to the value of this information and the practical application in daily life have been highly com-

Quartet—Revolutionary Scholz

Quartet—Revolutionary Scholz

Grand Selection—Opera "Tannhauser" Wagner

BETTER PAY AT ELECTIONS

Judges and Clerks to Get Schedule of Five Dollars Per Day.

CHANGE FROM THE OLD ORDER

Stipulation Then Had No Time Limit Attached, but Now New Law is Said to Recognize Full Day and Overtime.

Under the new election commissioner law, the clerks and judges of election will likely get \$5 per day from the day the election begins until they complete the count. The law says they are to receive "5 per day," while the old law used to read "5 per election." Thus the fellows used to bury out buckets of candies working nights, and the sun would rise again and again set while the judges were still working for their \$5. They had to stick to the job without increased pay no matter how long it took.

This is to hold good throughout the county as well as in the city. The judges and clerks in the country precincts will receive the same compensation as those in Omaha and South Omaha.

Deputy Election Commissioner Henry Ostrom is inclined to interpret the law in such a way that a day shall be considered a day, and a night shall be considered another working day. He does not believe that the men should be required to work all day and all night for the same \$5. If they work all day and part of the night, the fraction of the night will probably be paid for on the basis of so much per hour, based on the \$5 per day schedule.
