

Made in Nebraska

Linoleum Firm Leading in Its Line

The Fisher Manufacturing company, located at 1630 N street, Lincoln, Neb., are engaged in the manufacture of a line of automobile tire accessories, the principal feature of the line being the rim-grip sub-casing, a reinforcement for automobile tires, and in addition to this feature are manufacturing various styles in blow-out patches, flaps and other rubber made articles that go with the automobile tire trade.

The building occupied by the company covers a space of 14630 feet and contains many novel machines built especially for their line of work. They have a well equipped machine shop in connection with the factory where many of these machines are built. They are using one of the largest vulcanizers in the west and work up a large quantity of friction fabric and other rubber material annually.

As an automobile tire reinforcement, the rim-grip sub-casing manufactured by this company, has many features different from other devices along this line, the principal one being that it holds the pressure of the inner tube independent of the outer tire, and consequently is able to relieve the outer tire of a large portion of the strain that it is ordinarily obliged to carry, which is an important feature, especially when the sub-casing are used in old and weakened tires, as it prevents them from blowing out.

This plant is owned and operated by A. H. Fisher and W. C. Sunderland and has been doing a very prosperous business during the three years since it has been established, and preparations are being made for handling a large increase in business the coming season. The owners are progressive business men and are ever on the alert to make every improvement possible, either in their products or methods of manufacture.

The Dayton Moneyweight Automatic scale uses two high grade, oil tempered spiral springs as its actuating mechanism. These springs are specially manufactured by the best spring makers in the United States. Each spring is thoroughly tested by the manufacturer; it is given a further exhaustive test at the Dayton factory. As a result of these tests any spring which might have the least defect is thrown out and none but perfect parts are used.

The reliability of these tests is proved by the fact that in the Dayton company's twenty-one years' experience in building spring scales there is yet to be found the first spring which has shown the least deterioration in accuracy or strength by reason of the service demanded of the scales. It is a proven scientific fact that a spiral spring can be pulled to twice its length without danger of its not returning to its original position. The construction of this scale does not permit of but one-half of the strain permissible at full capacity.

The special tea and coffee scale which is shown is a winner. This scale is an equal arm or even balance device with two pounds on a chart, and with computations for a range of prices per pound suited to the tea and coffee and spice trade. Additional capacity is secured by means of weights. This scale is designed to meet the need of the merchant selling a special line of high-priced merchandise, where quick and accurate weighing is required, but where the average package is small.

The Care of the Hair and Scalp

Would you like to improve the condition of your hair?
Has your hair enough life and gloss?
Is your hair falling out or do you have dandruff?

Never forget that the condition of your hair depends on the condition of your scalp.

To keep the scalp healthy and the hair from falling out, use the following treatment:

First rub your scalp five minutes with the tips of your fingers to loosen the dandruff and dead skin.

Second. Wet the hair with warm water. Rub Velvetina Shampoo, apply more warm water. Rub vigorously. Rinse thoroughly. Dry.

Third. Apply Resorcin Hair Tonic, a little at a time massaging it into the roots of the hair. Do this three times.

This treatment will stop itching of the scalp, prevent dandruff and where the roots are not dead, will promote a new growth of hair.
