Boston's Girl cu'ptor.

Among New Engl. nd's fair daughters who woo the goddess art, no one is bidding closer to fame than Miss Theo Alice Ruggles, Boston's girl sculptor.

Whatever may be the decision of the judges in the competition at Providence for the statue of Shakespeare which that city is going to erect, Boston is proud to have submitted one of the best models, and that at the hands of a woman, and a very young woman besides. Miss Ruggles has chosen for her Providence model to represent the Bard of Avon as he might have been seen in his library had one chanced there upon an afternoon 200 years ago, and been a visitor interesting enough to engage his host's attention. Shakespeace, without hat or mantle, clad in doublet and hose, is seated upon a crosslegged stool in a natural, casy pose that is withal alert with vitality The right hand, resting upon his right knee, holds a roll of manuscript. The left hand is upon his hip, the left foot and leg being drawn back in an unstudied position.

She is a daughter of C. W. Ruggles. one of Boston's well known business men. Miss Theo's home is with her family in artistic apartments at 165 Falmouth street, on the Back bay, her studio being, as it has been from the first with her teacher, H. H. Kitson. "Christ" is one of the latest and one of ported and balanced.—New York Sun municates with a "drop," instantly as for other linear paper made in the the best examples of his art.

In clay by summer and in snow by winter Miss Ruggles childish bent for modeling unfolded itself till the small maiden's unmistakab e talent won the attention of her parents. It is six years since those who were in the open secret trooped out to Brook ine to see and remained to admire the wonderful snow statue of the reclining horse made by the little girl of fourteen years. It was but a bit of play work in the yard of what was then the family residence, but it served to emphasize the childish admiration for form and beauty and led to Theo's introduction to Mr. Kitson.

Four years ago she went to Eurode, accompanied by her mother, settling down in Paris for work and study. In the spring of 1888, after a few months on the other side, Miss Ruggles, then but seventeen years old, sent two pieces of sculpture to the Paris salon. and both were accepted. One, "The Shepherd Lad," was especially complimented by the critics, who referred to the other, and nutrition to some extent it as the work of Mr. Theo Ruggles, a mistake that was afterward corrected with a reiteration of the compliment as anchors, and the others to spread out earned by the work.

To the salon of 1889 Miss Ruggles sent her beautiful work, "On the Banks of the Oise," representing a nude boy gazing seemingly into a stream This received "honorable mention," the first ever conferred by the salon upon a woman sculptor

Other honors have fallen upon the young sculptress, who is now barely twenty years old and working away as industriously still and as unpretentious ly as if her first laurrels were yet un-

A beautiful girl, dark complexioned graceful by nature and untrammeled by inartistic "smear" frocks or coats, fond of all out doors devoted to her beautiful greyhound, Glaucus, quiet at her work, which she does swiftly talking little about it, loving it-it is but a faint sketch these outlines make of the young sculptor.

'Unspoilable' is what her friends say of her. It must be so else the glainour of success already so pronounced as hers would not discover her now the gracious, sweet, strong, womanly per sonality it found her.—Boston Globe.

## Plastic Cement for G. wns

gowns is plastic cement, which is to be taste. used for ornamentation. The cement is put on the gowns with a pencil in any pattern desired. Embroidery can be counterfeited so cleverly that the cement will be mistaken for the genuine article. It is possible by this process, which is, by the way, the invention of an American to reproduce tapestries, passmenterie, and, in fact any decoration desired in any one or a Mcrray's Magazine. dozen lines.

The cement is put on in very thin layers, and after it is has dried and be come woven into the fabric cannot be told from handwoven ornamentation. For light textile fabrics, gauzes and netting the cement is of great value, and some of the specimens of the work shown us are marvelously attractive.

The new process has a great deal to recommend it to women as an ornament of dress and for household decoration. It does not injure the material upon which it is used; it can be removed or changed at will, and it is cheap. Its use will enable a woman to change the pattern of a dress as many times as she likes and at very small cost.

! A dress ornamented with real orna mentation would cost several hundred dollars, whereas the cost of a gown done in plastic cement will not exceed fifty dollars. From ten to tifty dollars will be the tariff for the work when it ecomes better known.

Competent operators are now en ed in experimenting with the cewill make it po sible to reproduce the set difficult of embroideries and ta-

### Instinct in Ro .ts.

There seems to be an orderly instinct in roots that cannot be accounted for When the seed sprouts and the stem starts upward to make the trunk, one bud pushes down into the earth to form a top root. What it is that gives the order for one to push up and one to push down is incomprehensible. But more than this, while the top roof is descending deep into the ground, as it to anchor the tree securely against wind and storm, other roots start to grow horizontally just beneath that surface of the ground. These surface roots are at first but mere fibers. When the autumn arrived, and the leaves fall, most of these fibers die also leaving only a few to live over, and these become permanent surface roots. We know why some live to become permanent roots, as against the thousands which die. We say they are gifted with greater vital power. They were able to get more nutrition than means vigorous life-but in what way this ordering of some roots to go down n ar the surface where food is to act as feeders, is just as deep an unsolved problem as it was hundreds of years ago.—Thomas Meehan in Philadelphia Ledger.

## Norwegian Cheese.

Arranged in a series of little dishes around us were sardines, sausages, raw smoked mutton-which is really very good-and several kinds of cheese There is a terrible kind of native cheese called "mysost," which is made of goat's milk; it is brown in color, and in silver paper The initiated shave this into thin films and make it into a sandwich with black bread and butter. This cheese is really made from the whey after proper cheese has been manufac tured. All the water is then boiled out. and the remainder is compressed into these brown bricks, which taste sweet and gritty.

Love of this chees would take some time to acquire: the opportunity is not lacking, for it appears at every meal, rom breakfast onward. There are several native cheeses. Another terri. ble one, "pultost," is made with caraway seeds, and always smells as if it had gone bad. Mysost has no smell, is popular. Everybody in our employ The latest novelty for women's fortunately, only a terrible aspect and

Dr. Julius Nicholyson told us he wanted to send a few Norwegian delicacles to a friend in Germany, and among others he put in a piece of the native mysost. His friend wrote and thanked him for the salmon, etc., and then continued, "The soap is very nice; the lather." This was the cheese!-

## Bombiy's Big Dam.

The distinction is now said to belong to Bombay of possessing the greatest piece of solid masonary construction that the world has ever seen in modern times. It appears that for years past the water supply of Bombay depended upon works known to be defective, involving the possibility of a water famine in that great eastern seaport and in view of this a consultation of eminent engineers was held, under the direction of the government, with the results that a large dam was determined on, to inclose the watershed of the valley which drains into the sea south of Bombay.

This gigantic structure, designed and accomplished by the superior engineering skill of T. C. Glover, is two miles long, 118 feet in height, and 103 feet wide at the base, with a roadway on the top 24 feet wide, the stonework alone costing \$2,000. The lake of water which this dam imprisons is some eight square miles in area, and sixty miles of pipe perform the service. at and cutting the stencils, which Twelve thousand Hindoos were specially trained by Engineer Glover for employment on this dam.-New York

is expected to be one that will be planted in Pomona valley, Cal. Over 700 acres will be planted or 73,000 trees. The projectors believe they can produce figs equal to the best Smyrna varieties. The trees will be imported from Syria.

The following card in the Billville, Ga., Banner hints of troubles not wholly unprecedented among rural editors: We are besieged by poets philosoquers and statesmen, who are in search of places on our staff. To all we would say that we are chock full and they must continue to tell us how to run the paper from a distance This shows, however, that the Banner occupies a high position, for the sheriff levies on us once a week, and we do most of the type setting on the roof.

## A Great Inland Ocean.

Did you ever compare Hudson Bay with other and lesser bodies of water and land? If you never did, and wil, take the trouble to do so, you cannot but we find great difficulty in making help uttering exclamations of amaze ment when the immensity of this great inland ocean dawns upon your understanding. From Fury straight on the north to the most southern in lentation at the mouth of Abbitibbe River it is exactly 1, 380 miles while the width from Cutton's Bay to the mouth of Whale River is but little under 700 miles. It is as the long as the first Atlantic cable, and nearly as the combined lengths of Lakes Huron, Erie and Ontario. It extends over 12 degrees of latitude and covers not less than a half a million square miles including more territory within its limits than can be found within the borders of Great Britain and Ireland, Sweden, Norway, Greece, Switzerland, Den. mark, the Netherlands and Belgium combined. It drains 3 000,000 square miles of territory, receives rivers from the Rocky mountains, Labrador, the Arctic regions and some which have their source almost within the limits of the United States.

> John Leech, whose humorous pictbands. Their noise affected his nerves and prevented him from drawing, and was unable to silence them.

## New Sugar Process.

It is claimed that a new process has recently been made in the manufacture of sorgum sughar by which gum substances may be eliminated from the sacharine matter, and which will make the cane yield from fifty to seventy pounds more sugar to the ton than it has been doing. rofessor Wiley, who has been experimenting in this, says that sorgum sugar will bring about three cents a pound and possibly four cents. This will give the farmer more for his product than anything else he can produce, and still leave a good profit to the manufacturer .-New York Journal.

Problematic Scriptures. The valley of John Day river, a modest tributary of the Columbia, seems to have become a rendezvous of war western archæologists. Sculptures, carved into a basaltic ledge of that neighborhood, are supposed to represent 'anthropoid apes,' and the question is where the Oregon Indians could have seen the originals of those emblems. In Sumatra, India or some ape haunted region of the western continent? A less romantic solution of the enigms would be the conjecture that the seulpt ures in question do not represent aper at all, but bears or barbarians.-Phila delphia Times.
