

**Fashion Notes.**  
One of the latest fads in gloves is a mirror neatly hidden in the palm.  
Mercury is finding increasing favor with fashionable dressmakers and tailors as a shirt lining.  
Nearly all the autumn hats are overlaid with trimming, giving their wearers a top heavy appearance.  
Jewelry will be very much more in evidence than for a long time past. Dog collars of rhinestones and fancy pins are the whim for the moment.

## It Will Pay

To make some provision for your physical health at this season, because a cold or cough, an attack of pneumonia or typhoid fever now may make you an invalid all winter. First of all be sure that your blood is pure, for health depends upon pure blood. A few bottles of Hood's Sarsaparilla will be a paying investment now. It will give you pure, rich blood and invigorate your whole system.

## Hood's Sarsaparilla

Is the One True Blood Purifier.

Hood's Pills are tasteless, mild, effective. All druggists.

Walter Baker & Co. Limited,

The Largest Manufacturers of PURE, HIGH GRADE

COCOAS and CHOCOLATES

On the Continent, have received HIGHEST AWARDS

from the great Industrial and Food EXPOSITIONS

in EUROPE and AMERICA.

WALTER BAKER & CO. LTD. DORCHESTER, ENGL.

Beecham's pills are for biliousness, sick headache, dizziness, dyspepsia, bad taste in the mouth, heartburn, torpid liver, foul breath, sallow skin, coated tongue, pimples, loss of appetite, etc., when caused by constipation; and constipation is the most frequent cause of all of them.

One of the most important things for everybody to learn is that constipation causes more than half the sickness in the world, especially of women; and it can all be prevented. Go by the book, free at your druggist's, or write B. F. Allen Co., 165 Canal St., New York. Pills, 10¢ and 25¢ a box.

Annual sales more than \$1,000,000 boxes.

The Greatest Medical Discovery of the Age.

KENNEDY'S MEDICAL DISCOVERY.

DONALD KENNEDY, OF ROXBURY, MASS.,

Has discovered in one of our common pasture weeds a remedy that cures every kind of Humor, from the worst Scrofula down to a common Pimple.

He has tried it in over eleven hundred cases, and never failed except in two cases (both thunder humors). He has now in his possession over two hundred certificates of its value, all within twenty miles of Boston. Send postal card for book.

A benefit is always experienced from the first bottle, and a perfect cure is warranted when the right quantity is taken.

When the lungs are affected it causes shooting pains, like needles passing through them; the same with the Liver or Bowels. This is caused by the ducts being stopped, and always disappears in a week after taking it. Read the label.

If the stomach is foul or bilious it will cause squamous feelings at first.

No change of diet ever necessary. Eat the best you can get, and enough of it. Dose, one tablespoonful in water at bedtime. Sold by all Druggists.

World's Fair HIGHEST AWARD.

IMPERIAL GRANUM

Try it when the digestion is WEAK and no FOOD seems to nourish. Try it when seems impossible to keep FOOD on the stomach!

Sold by DRUGGISTS EVERYWHERE!

CHERRY PECTORAL

At the World's Fair.

**The Distinguishing Mark.**  
Miss Castique—You are engaged to that Mr. Atkinson, are you not? Now, tell me honestly, what can you see in him that distinguishes him from all the other men in the world whom you have ever met?

**Half and Half.**  
First Little Girl—Did you know, Lizzie, that we are in half mourning at our house?

Second Little Girl—Indeed! Who is it that's half dead?

**It Makes Some Men Tired.**  
They were from some locality up north and on their wedding tour. In taking in the sights of Detroit they boarded a Woodward avenue car for a terminus and back. As they sat beside each other, her hand in his hand and his straw hat fanning them both, a grumpy old coddler on the next seat sneeringly observed:

"Neither case of love's young dream, I see!"

The newly wedded looked around at him, but made no reply, and pretty soon he said:

"There ought to be a law against this spooning business! It just makes me tired!"

"Oh, it does!" retorted the young man as his cheeks began to redden.

"Maybe you never spooned when you was a young man?"

"If I did it was not in such a public place!"

"What's the place to do with it?"

"Can't everybody tell right off the handle that me'n Jennie are just married?"

"I should say they could."

"And that we are on our bride-tour?"

"Yes."

"And that we are just honey and peaches?"

"That's what tires me."

"It does, eh? Well, it don't tire us. She does on me and I'd die for her, and we are going to kiss and hug and squeeze hands and eat gum-drops as long as our \$17 holds out, and you and all the rest of the old mosebacks in this town can lick your chops and go to grass!"

And he sat down and put one arm around his wife's dove hugg'd her up the grumpy old man came to his corner and dropped off with a grunt of disgust.

**Lemon Juice as Polish.**  
Lemon juice applied to cast iron articles gives an excellent finish to the metal. It turns the portion of polished cast iron to which it is applied to a bronze black, and when touched over with shellack varnish will absorb a sufficient amount of the varnish to preserve it. To many, lemon juice would seem to be a weak and ineffective acid for metal, but every one knows how quickly a knife blade of steel will blacken when used to cut a lemon, and the darkening of polished iron by the acid is very beautiful.

If the hair is falling out and turning gray, the glands of the skin need stimulating and color-feeding, and the best remedy and stimulant is Hall's Hair Renewer.

**Queer Affairs in Louisiana.**  
That is a queer state of things down in Louisiana where a colored murderer condemned to be hanged, has secured a stay of proceedings from the highest court on the ground that no negro is by law allowed to serve on a jury in New Orleans, and as there was a negro on the jury that convicted him it is held that he did not have a trial by a jury of his peers. It is a remarkable state of things when a negro jurymen is held not to be the peer of a negro murderer.

**Hall's Catarrh Cure**  
Is a constitutional cure. Price 75 cents.

**A Gentle Hint**  
It was 11:30 p. m., and the clock marked the half hour with a sharp bang. The young man looked around hastily—the girl weary.

"Oh," he said, with a short laugh, "it almost startled me."

"I beg your pardon," said the girl.

"It almost startled me," he repeated, politely.

"Oh, excuse me," she apologized; "I thought you said it almost started you."

He got out during the next ten minutes.

We think Fiso's Cure for Consumption is the only medicine for Coughs—JESSE PICKMAN, Springfield, Ill., Oct. 1, 1894.

Athens Globe: When the weather is good for corn, it is not good for much else.

Ten Jews were elected to the Italian parliament at the first trial in this last election, the most prominent being the minister of finance, Sonnino.

## FACTS FOR FARMERS.

### HELPFUL SUGGESTIONS FOR THE AGRICULTURISTS.

**A Veterinarian's Practical Means of Preventing Tuberculosis—Arrangement for Tying Celery for the Market—Wagon for Hauling Corn Fodder**

**To Prevent Tuberculosis.**  
Introduce a consumptive cow into a herd, and the animal on each side of her in the common stanchions, shown in Fig. 1, will be infected from her breath and spit. Put a board partition on each side of the diseased cow, extending well out in front, and it will be long before she contaminates her neighbors, if she ever does. Exhaustive tests in Denmark, extending over two years, with 208 head, show that "it is possible to rear a healthy herd on a farm where there is an infected herd if the two are separated by a

wooden partition, and this will prove successful, even when the calves from diseased cows are raised." G. N. Kinnell, a Pittsfield veterinarian, therefore advocates individual stalls for each cow, by simply running a partition between the stanchions, boarded up in front, with a ventilating shaft eighteen inches square over each cow's head, four or six of them to join in a common shaft running through the roof. (Fig. 2 shows such partition not boarded up in front, the advisability of which we question.) He mentions a herd that escaped infection from two badly diseased cows because the sick

cows were kept in stanchions boarded up in front, with a tight partition between each stanchion. Dr. Kinnell wisely considers some such method of separating cows the most important, simplest and cheapest means of avoiding infection. The germ of tuberculosis dies in sunlight, hence a stable cannot be too light and airy.—Orange Judd Farmer.

**Windbreaks.**  
In every long-settled locality where the soil is sandy, farmers quickly learn, after the original forest is cleared away, to plant windbreaks to protect their soil from blowing away. Such windbreaks do good which more than offsets the waste of the land which they occupy. Not only is soil blown away after being plowed, but during the summer there are frequent violent sand storms where the winds have full sweep, which uncover seeds and plants or blow sand against the foliage of plants, cutting and spoiling it. These windbreaks serve another important purpose in winter in keeping the snow evenly spread over the fields. They should be of evergreen wherever possible, so as to make a protection for winter as well as for the summer season.—American Cultivator.

**Tying Celery for Market.**  
Novices do not always bunch celery properly. An old grower of celery near Buffalo, N. Y., bunches his crop as follows: Two bricks are set up edge-

wise and two strings laid crosswise. Two neatly trimmed stalks are squeezed in tightly between the bricks, two more squeezed in on those and two more on top, making six heads in the bunch. All are then tied tightly with the strings.

**Timothy vs. Clover.**  
We are not wholly averse to a small amount of timothy sown with clover, but we are against giving the timothy the preference, for we see object lessons continually averse to the latter practice. Farms are not improved by it. On the other hand, says the New England Farmer, when clover is given the preference, the farms are growing better. The only pastures with us that show green in quantity to delight the eye of the farmer are those partly or wholly clover, and the clover is the best that was not allowed to perfect a growth early in the season.

**One Acre in Hens.**  
It is a progressive farmer who can succeed in making one acre support a cow, and he is then perfectly satisfied with a profit of \$50 from her. If an acre of land can be made to yield any kind of crop that will pay a profit of \$50, the success attending such a result will be considered worthy of notice. Profit means, of course, all that portion of the gross receipts which remains after the full expenses are paid,

and a profit of \$50 an acre is very large. It is easy to figure (on paper) the possibilities of an acre of land, but there are facts abundant to demonstrate that \$50 is but a small sum to derive from one acre of land devoted to poultry. It is rare to find a case where a large flock of poultry has been given the space of one acre that the less did not pay well, although due credit is not always allowed for the "home" market, which calls for poultry and eggs, accounts not being kept with the family table.

**Horse Meat.**  
At present the German butchers pay from \$45 to \$50 for horses; but already the demand is beginning to increase the price. Mr. Tingle, in Farm News, advises the American farmer to go into the business of raising horses to supply the German food market. He says they can be raised cheaper than cattle, and can be more easily shipped across the water. As American beef and pork are excluded from the German markets, he recommends that the place of the two products be filled with horse meat.

Last fall horses sold at auction in Nebraska at from \$5 to \$10 each. The short crops had something to do with the low price; but the falling off in the demand for horses, by reason of the introduction of electricity as a motor, the bicycle and other causes, had far more to do with fixing the price. It is doubtful if the prejudice against the use of horseflesh as food in this country will ever be wholly overcome, and the Germans can eat our surplus horses while we keep and consume our beef and pork.

There is no sanitary reason why horseflesh should not be used for food, as the horse eats the same things that the ox does, and is, if any difference, more dainty about what he eats. It is simply a prejudice, that is largely sentimental, and founded on the belief that the horse is intended for better things than to become food.

**Care of Pigs.**  
Profitable swine breeding depends upon the time at which the hogs are slaughtered in order to secure the highest market prices. Thus, the time of farrowing must almost of necessity be so arranged that a part of them at least be dropped in cold and frosty weather. That one has a moderately warm pen is not enough; the run for the sow must be in a temperature which is evenly warm all of the time, and this, I mean, controlled by animal heat enough to insure no frost.

Out of the forty pigs which we have had the past winter, twenty of them were dropped in January, and all did well and to-day are the finest lot we ever had, says C. H. Whitcomb in The Stockman. They are on heavy grass pasture, and will remain so until our peas are ready to turn into. Having pigs farrowed in this way gives us an opportunity to take advantage of both the early markets. Then, too, we must let nature have her way in the feeding of young pigs. While growing feed wholly on bone and muscle making foods, and the pigs will have no stop-offs.

**For Handling Bulky Forage.**  
In handling grain, hay or green corn fodder, a low rack, similar to the one shown in the illustration, is a great saver of time and labor. One man standing on the ground and simply

drawing the corn toward himself can lay it upon the table of the cutting machine without stopping, or raising it up simply to lay it down again. The top of the rack is 7x14 feet with six-foot standards. The stringers are 4x6 inches, 19 to 20 feet long. They are hung from the front axle by means of a lengthened king bolt provided with a nut and washer. From the hind axle they are suspended by 3/4-inch rods with nuts and washers below and hooks above to go over the axle. The stringers should be twenty inches apart in front and thirty-two inches behind. A short wrench keeps the bound from tipping up. I find this rack very convenient. As short a turn can be made with this as with a sixteen-foot rack.—American Agriculturist.

**All-Round Cattle.**  
The cry is nowadays: "Give us the good all-round animal." The Country Gentleman thinks there is an element of error in this. Carry out this idea to an extreme, and you blot out the distinctive characteristics of every breed of animals existing. No one animal can do everything best. As in the mechanical, so in the animal world—there must be a division of labor. We owe all the improvement of the present day in all classes of domestic live stock to special breeding for a definite purpose. Let the breeder of the race horse try to combine the strength of the Clydesdale or Shire with the speed of his thoroughbred, and the result is an increase of strength, but a reduction of speed.

**Grapes and Electricity.**  
French scientists are reported to be farming by lightning. They found that electricity quickens germination and growth, so they set up poles armed at the top with copper spikes to draw electricity from the air. A wire conveys it to a network of galvanized iron wire four to six feet below the growing crops, and grapes are said to grow 50 per cent. larger and contain more of what grapes are raised for.

**Raw Eggs for Scours.**  
Raw eggs, says the Orange Judd Farmer, are a cure for scours in calves. Prevention is better than cure, and by good judgment and intelligence the disease may be prevented. But if the disease develops give the calf one or two raw eggs, shells and all. Repeat if necessary.

ABSOLUTELY PURE

**Simply Following Instructions.**  
"You say that I'm not altogether objectionable to your parents," he said ruefully.

"No," she replied; "father and mother both speak very highly of you."

"Then why does that big dog assault me every time I come near and chew a piece out of my clothes?"

"Oh, you mustn't mind Brutus. He's trained to do that. Aunt has gotten almost enough samples from him to make a lovely patch-work quilt."

**Know Where He Belonged.**  
A Newfoundland dog appeared as an all-important witness in a case in a justice's court in Chicago the other day. The dog was in the possession of a woman who was charged with stealing it. She was directed to bring the animal into court and when he saw the plaintiff, his real owner, he broke away from the woman and made such a fuss over his master, that the justice immediately decided the case in favor of the plaintiff.

**Red cannot be recommended on account of its washing qualities, as it is very apt to fade. To prevent this add a little borax to the washing water and the color will retain its usual brightness.**

To utilize ordinary dripping is not at all difficult in a well-regulated household, but bacon fat is often wasted. It should not be, however, for it is most handy for basting poultry of every description.

The best view are sometimes right at the end of the longest tunnels.

**THAT JOYFUL FEELING.**  
With that exhilarating sense of renewed health and strength and internal cleanliness, which follows the use of Syrup of Figs, is unknown to the few who have not progressed beyond the old time medicines and the cheap substitutes sometimes offered but never accepted by the well-informed.

If women's sleeves get much bigger than they are now, it won't be necessary for them to wear anything else.—Somerville Journal.

A weighty couple were recently wedded in Chicago by Justice Martin. They were George Hayes and Lottie Kelley. The groom weighs 300 pounds and the bride 230 pounds.

A remarkable apple tree flourishes near the residence of Oscar Wells at Mount Olin, Ky. One half of every apple that grows on the tree is very sour, while the other half is very sweet.

The Parisian dressmakers rubycopodium powder on their hands, and thus prevents the perspiration from soiling the delicate ribbons and silk fabrics that they are constantly finger-ing.

A round trip of one of the ocean steamers, like the St. Louis, entails an expense of about \$70,000. The coal consumed costs nearly \$15,000, the provisions \$12,000 and the breakage \$5,000.

On no account keep the soiled linen bag in the sleeping department, for it is very unhealthy and tends to taint the air which is inhaled during the night.
