The news of the death of E. Shatto, who died at the home of his daughter, Mrs. Boyles, of Pleasant Ridge, Wednesday afternoon, reached here just too late for the paper last press day. Mr. Shatto was about 81 years of age and had been in ill health for several weeks past. The funeral service were conducted by Rev. Daniels at the Pleasant Ridge church Friday afternoon and the remains were laid to rest in that cemetery. The bereaved children and relatives have the sympathy of all.

The PRESS-JOURNAL in reporting the death of Mr. Konrath last issue, stated that he died before he could be taken to the house. This, we have since learned, was a mistake, as he died in the house on the bed. Mr. Konrath had been in ill health all winter, and accompanied by his son John, he went to South Dakota for treatment. When he first arrived there he seemed to improve but a change soon came for the worse. He then went to Sioux City where the best physicians of that city were procured for him, but they said that nothing could be done for him as he had heart disease, and that if he wanted to see his family again that he should not lose any time in starting for home. He and his son started at once and arrived home soon enough for Mr. Konrath to see his family but he was unable to talk with them as he died soon after being taken into the house. He was born in 1845 in Germany.

Cornstalks, hundreds of them are being used today for making paper, and the growth of the new industry is proving a boon to the western farmer as well as to the man who conceived the project. Both shell and pit of the stalk have been used in several mills with considerable success, the machinery necessary for separating them having been introduced about a year ago. Some Illinois farmers have their fields harvested for them by a company, which hauls its machine to a farm, shucks the corn, deposits the grain in boxes, bundles the stalks into great rolls ready for shipment, and leaves the husks and fodder prepared for use as cat feed on the farm—all in a fraction of the time it formerly required the land owner to gather his crop. The farmer pays the machine man \$1 an acre, and the latter can clean up six acres a day. The stalks become the property of the company and are shipped to its paper mill. It is estimated that a mill with a daily capacity of 100 tons of stalks annually, will require 60,000 tons of stalks annually, and that the husking machine some day will be perfect so that it will cover fifteen acres a day.

Not a Rash Vow.

The no-drinks-between-meals movement is rapidly spreading over Great Britain. However, it cannot be called a temperance wave, inasmuch as a signer of the pledge simply promises not to drink liquor of any kind "except at my midday and evening meals." It isn't a very rash vow for a moderate drinker to make.
