# Gladness Comes

With a better understanding of the transient nature of the many physical ills, which vanish before proper ef-forts—gentle efforts—pleasant efforts rightly directed. There is comfort in the knowledge, that so many forms of sickness are not due to any actual disease, but simply to a constipated condition of the system, which the pleasant family laxative, Syrupof Figs, promptly removes. That is why it is the only remedy with millions of families, and is everywhere esteemed so highly by all who value good health. Its beneficial effects are due to the fact, that it is the one remedy which promotes internal cleanliness without debilitating the organs on which it acts. It is therefore all important, in order to get its beneficial effects, to note when you purchase, that you have the genuine article, which is manufactured by the California Fig Syrup Co. only and sold by all reputable druggists.

If in the enjoyment of good health, and the system is regular, laxatives or other remedies are then not needed. If afflicted with any actual disease, one may be commended to the most skillful physicians, but if in need of a laxative. one should have the best, and with the well-informed everywhere, Syrup of Figs stands highest and is most largely used and gives most general satisfaction.

# A SUGAR BEET BOOM.

NEBRASKA WELCOMES THE SACCHARINE VEGETABLE.

And Will Do What It Can to Encourage Growth of the Same-Much Enlighten- urisen here, he felt sure, would recon ment on the Subject by Men Who Have Made Sogar Beet Culture a Study-Beet Sugar Factories, the Bounty Ques-

## Nebraska's Coming Industry.

There was deep and absorbing interest in all the proceedings of the Beet everybody to grow rich, not for the sake Sugar convention held at Fremont. On of the money, but for the good that can the second day of the meeting the first be done with the money. Now, there matter taken up was selection of place having the analysis made by state are three new cereals recently created for holding the next convention. that will make money for the farmer. Several points were considered, Grand One is Silver King Barley, the wost I Island finally being chosen. The date wonderful creation of the age, yielding was left to the executive committee, sends a load of beets to the factory 90, 100 to 116 bu, per acre in 1895, and with a recommendation that it be fixed that he will receive the fair treat at a time when the Grand Island factory is in operation.

Harry O'Neill, who represents the new method known as the Masse-Cuite the Norfolk factory, read a paper on process, intended for small factories the production of the Norfolk factory. for reducing the crop to raw sugar for the refinery was introduced. The clarit has paid for beets the sum of \$492, ified juice, he said, after being treated with lime and all the impurities taken out, is put through a copper cylinder, through which a current of hot air passes. An experiment was made at Grand Island on juice 8.6 per cent sugar and 91.4 per cent water. After passing twice through the cylinder the result was 8.5 per cent water and 91.5 per cent sugar.

With the assurance of a continuation of the bounty law the process will be rapidly developed. If the bounty law remains unchanged after the next legislature the company will be ready for operations.

In the discussion following Mr. O'Neill's talk it was brought out that a plant with the capacity of 100 tons a day would cost about \$30,000. The company will encourage co-operation and will not sell the machines.

Chairman Furnas of the committee on resolutions reported. The resolutions favor a state and national bounty for the encouragement of the sugar industry; recommended the formation of county associations; indorse the trans-Mississippi exposition at Omaha; indorse the Nebraska club, the state irrigation association and the irrigation fair at North Platte. Thanks were extended the state board of agriculture for its work. Improved methods of soil culture is favored. The beet sugar enterprise was recommended and thanks extended to the citizens of Fremont for their hospitality. A resolution by Peter Jansen was submitted and adopted, thanking ex-Governor Furnas for his long and arduous labor in helping to build up Nebraska.

Superintendent Granger of the Utah sugar factory was present and address-ed the convention from the factory standpoint. The first crop was raised in Utah in 1891, when 9,960 tons were produced and made up, and in 1895 8,000 tons were made up. The average of sugar per ton of beets was 190 pounds. The factory cost \$750,000. Last year a dividend of 10 per cent was declared. The factory lost money at first, but the business has grown steadily. This is one of the factories that is wholly American. The factory pays \$4.25 for beets with 11.80 stan- England notes was formerly made from dard. A farmer is selected in every grape stone charcoal, but now it is mancommunity to do business between the farmers and factory. No beets less than the standard are taken at any

Hon. C. J. Green gave an eloquent young one, has the bill, feet, and legs and stirring address on the importance of the sugar question, of its vast consumption and small production in this country. His address was the most eloquent one of the convention. He reviewed at length the tariff legislation of the country, with an appeal for its application to the sugar and other manufacturing interests of the day.

"The Possibilities of Nebraska" was ably treated by R. M. Alien, president of the association. The experience of Nebraska as a sugar-producing state was compared with other states and countries, showing that they did not always meet with success. The crop in Europe was very rich. Their beets are firmer and contain more sugar than is possible in this country, which may be due to climatic conditions and to seed. Germany can produce four and a half more tons of beets to the sere. with 2 per cent more in raw sugar than is possible here. In Russia the industry is under control of the government and possesses all the elements that go to make sugar culture profitablefertile soil, cheap fuel and low priced labor. Beets have been tested with as high as 35 per cent of sugar. To compete with these countries it is apparent that we need protection. We want a duty on sugar that is fair; not an exacting one. Mr. Allen gave his hearers an insight of all sugar-producing countries the world over and also as to the yield. Here in Nebraska we have a good field, the right altitude, rich soil. and with skilled labor and a study of this subject we may be able to save much which is now lost, and make discoveries of vast benefit to beet culture. J. S. Hongland addressed the association on state legislation. If the bounty

law only tended to the enrichment of the manufacturer it should be voted down, but if it was a source of revenue and made the state prosperous it should be sustained. He referred to school taxes and the wolf scalo bounty and proved that the law was beneficial When the industry is established it will enhance the value of land and property, make a demand for labor and increase the population. He was in favor of amending the corporation laws so that large stockholders could not crowd out the small. He would make it so there was only one vote for the man, not a vote for share of stock. Under this basis he would organize distriet factories and county associations.

Hon. W. G. Whitemore of Valley read a paper on the subject "What Now?" He regarded this convention as the most important of any that has convened in this state since that which prepared our constitution. We may well congratulate ourselves and return to our homes with this sentiment, "Nebraska is the place and sugar beets the Men differ because the facts which form the basis of their judgment are not understood by them alike. failed to see how those people who had signed a contract with the Oxnards to raise beets of a certain standard of
