How Doctors Are Often Called to Treat Ailments That Really Demand the Dentist's Help

Sacs of Pus formed at the roots of diseased teeth are frequently the unsuspected sources of many common ailments usually ascribed to other causes.

Scarcely anyone realizes that a tooth is a living thing until it becomes diseased, and 90% of the people who are fortunate in possessing sound teeth do not realize the blessings of them until it becomes necessary to have them attended to. Good teeth are more important in preserving your health than digestive powers. When your teeth become incapable to properly perform their duties your digestive organs become overworked and soon cease to do the extra amount of work required of them, making it necessary to forego food of any kind that does not meet the approval of that tyrant, your stomach.

The proper thing to do is have your teeth examined by some competent Dentist. We will gladly examine your teeth Free of Charge, and tell you the truth. Don't Delay—Do it Now.

Series No. 3 will appear in this space next Sunday. Save this series; they are important to you.

The Cross Section of a Tooth in the Middle Shows the Pulp in the Heart of the Tooth, with its Blood Supply. Surrounding the Pulp is Dentine and Outside of This the Enamel. On the Right the Cross Section Shows in a Black Spot a Decayed Area Eating its Way Through Enamel and Dentine Toward the Pulp. It is Suppurating at the Roots that Poisons the Body. We Are Not Experimenting—All Work Guaranteed 10 Years.
