

WALLIS CUB SHOWS SPEED AT START

Breaks World's Record for Plowing Three-Acre Tract on First Day of Show.

FAMOUS FOR ITS LONG TRIP

The world's record for fast plowing was smashed into atoms on the opening day of the Fremont demonstration. The Wallis "Cub" tractor, of cross-country fame, lowered the record for plowing three acres with a four-bottom plow from 87 1/2 minutes to 77 minutes.

Coupled with this remarkable performance, was the fact that the land the "Cub" was plowing had a depression half filled with water across it and the plow had to be dragged through this. Other tractors filled their wet spots with straw and lifted their plows across, but the little "Cub" pulled its four plows through without lifting them once.

The rate of speed maintained by the Wallis tractor was greater than is generally necessary in farm operations, but it shows the reserve energy and surplus power to be expected in this machine. Two and one-fourth to two and three-fourths miles per hour is the speed ordinarily used, but the Wallis people believe that more power should be on hand when needed.

The wonderful flexibility and power of the motor in the "Cub" was well shown several times during its famous thousand mile durability run. At times mud holes were found in which the drive wheels sank to the hub, but a judicious use of chains and logs and the great power of the motor made recovery of firm ground easy.

In one bad stretch of road just west of Atlantic, Ia., one drive wheel was deep in the mud, and the whole tractor inclined at an angle of thirty-five degrees, and yet the engine righted and pulled out under its own power.

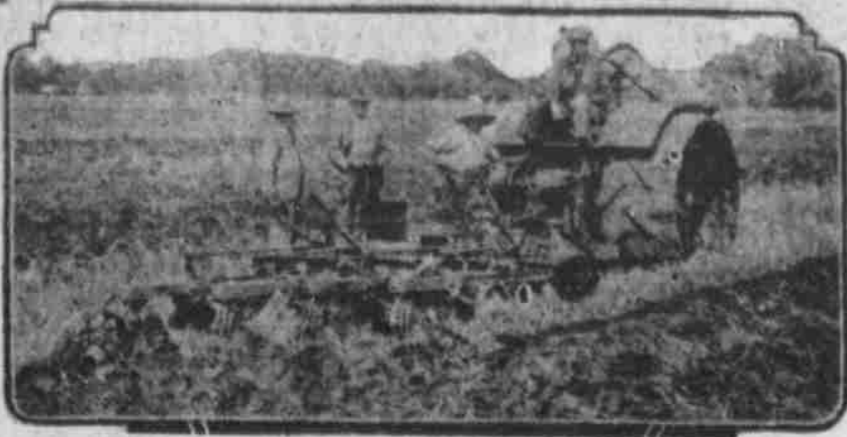

The J. I. Case Plow Works, general distributors for the Wallis "Cub," is highly pleased with the performance of its machine, both in the durability run and the field work of the demonstration and believe that their machine will gain the confidence of all traction engine users.

Its motor is rated as a fifty-two horsepower, with a draw bar pull of twenty-six horsepower. It is guaranteed to pull four bottoms anywhere, and in very light soils it will pull six. It will handle the heaviest loads on the road at a speed of four miles an hour, or will pull on the belt any machine in use on a modern farm.

With the remarkable performance of the "Cub" on the first day of the demonstration, its record breaking plowing speed, the popularity of the "Overland Limited" was assured.

LION IS ALMOST CAPABLE OF RUNNING BY ITSELF
Some machines are so efficiently made during these modern times that they seem to be endowed with life and brains. This is true of the Lion tractor being shown at the Fremont demonstration. The Lion can be started running and then left entirely alone. It will turn round and round and round in a perfectly curved circle and keep it up for hours without the variation of a foot. Moreover, the Lion may be used in small space as well as large tracts—it is adaptable to all manner of close and difficult work, can be

Made a World Record for Speed

THIS WALLIS CUB TRACTOR PLOWED THREE ACRES IN SEVENTY-SEVEN MINUTES ON WEDNESDAY.

SIMPLEX STRAW SPREADER SHOWS ITS PRACTICAL USE

C. L. Rice and W. P. Syter, in charge of the Simplex Straw Spreader for the Hanson Campbell company, did some real practical work on the grounds of the Tractor Farming Demonstration and upon the roads round-about. Rain fell Tuesday evening and Wednesday, but they did not deter the crowds of people who were bent upon attending the demonstration. Crowds came, mud or no mud. They were prepared for mud, but when they arrived at the grounds, they were agreeably surprised to find there was no mud—it had been covered up with a nice carpet of straw.

Many wondered who had gone to such pains and how the work had been done so nicely, the ground being covered evenly with a good spread of straw. The explanation was soon discovered when the men named were seen busily engaged in finishing their work with the Simplex Spreader. The machine sure did make the straw fly, not into the winds to be scattered broadcast, but upon the ground where it was directed. An even spread of straw was distributed over an expanse of from fifteen to twenty feet at every trip across the field. It is said that two men can thus cover from fifteen to twenty acres a day.

BEAVER MOTOR HAS FINE EXHIBIT AT FREMONT SHOW

The Beaver Manufacturing company, makers of the Beaver gasoline motor, is certainly a strong booster of the Fremont Tractor demonstration. No less than five men from this concern are in attendance. These representatives consist of General Superintendent W. A. Carrell, Chief Engineer Wallensak, Factory Representative Charles Cloum and Representatives Ralph Neasey and Conway Neasey.

The Beaver Manufacturing company is the oldest maker of gasoline motors in this country. The Beaver motor car can be seen doing practical work in the Peoria tractor, in which it is used.

LAWYERS BOUND FOR ANNUAL BAR ASSOCIATION MEETING

The westbound train over the Burlington at midnight will carry three sleepers loaded with eastern lawyers going to the annual meeting of the American Bar association, held in Salt Lake

Sells One Hundred Simplex Tractors to a Kansas Dealer

The size of the crowds which have been in daily attendance at the Tractor Farming demonstration has been a matter of comment. Not only have many individual sales been made to farmers, but a large number of orders have been booked with dealers. Some of these "paper" sales were quite large. The limit appeared to be reached Wednesday evening when H. R. Tudhope, president of the Simplex Tractor company, announced a sale of 100 tractors. These were all taken by one dealer, a prominent business man of Wichita, Kan. And that it was a bonafide order was evidenced by the fact that cash with order was secured.

Mr. Tudhope, in speaking of his success, attributed it to the fact that the Simplex is a remarkable value at a reasonable price, offering the farmer an efficient machine at a low first cost. Considerable success is also due to the fact that the Simplex is a very simply constructed machine, very accessible—all parts being open to inspection and easy to understand. With all this the Simplex is a four-cylinder, four-plow tractor of abundant power.

Indigestion? Can't Eat? No Appetite?
Dr. King's New Life Pills stir up your liver, aid digestion; you feel fine the next day. Only 25c. All druggists.—Advertisement.

HANSCOM PARKS WIN FROM THE RIVERVIEWS

The boys' playground ball team from the Hanscom park recreation center defeated the Riverview park team on the grounds of the latter, this being the opening game of a series which will be played this month by the inter-park league of seven teams.

TWO BOYS AND A DOG ARE WALKING ACROSS COUNTRY

Two Harrisburg (Pa.) boys, E. G. and G. R. Otatot, passed through Omaha on a "hike" from Harrisburg to San Francisco. They are dressed in khaki suits, and each carries a knapsack weighing thirty-five pounds. They are accompanied by Bailey, a beautiful setter, who travels unhampered by any baggage, and who has come every step of the way with them. They have been on the way forty-two days, their best day's walk being fifty-two miles.

Barn Burned Near Seward.
SEWARD, Neb., Aug. 12.—(Special.)—The large barn on the Jones section, near town, was struck by lightning and completely destroyed last night. The barn contained forty tons of hay and more than 500 bushels of grain. It was insured for \$1,500.

WILLIAM JENNINGS BRYAN TWISTED THE TAIL OF THE

Bates Steel Mule

And Opened THE National Power Farm Tractor Demonstration at Fremont, Nebr.

The Bates' Steel Mule is more than a tractor, even Mr. Bryan recognized this fact.

Of course it plows—pulls three 14 inch plows. But it does more. Its endless track makes it ideal for discing plowed ground.

Because you drive it like a real mule one man can drive both tractor and binder in harvest time. It also cultivates corn and other crops.

In one machine it combines all the power of a tractor with the general ability of a mule.

SEE THE "CUB"

At This Demonstration

The Wallis "Cub" Tractor is entered for this year's demonstration and will doubtless be the sensation of the show as it was in 1914. This efficient machine has broken the world's plowing record and has just successfully completed the first 1000-mile durability run ever attempted by a tractor.

PLOWED 3 ACRES IN 87 MINUTES

at the National Power Farming Demonstration at Fremont, Neb., last fall. This "little bunch of power"—the Wallis "Cub" Fuel-Save Tractor—broke the world's record for fast, deep plowing. It finishes a plowing job in a fraction of the time required by horses or cheaper tractors and at minimum cost. Works where and when horses couldn't. Can't be overworked. Costs nothing to keep when not working. You can make it earn money every month in the year—working for others, doing road work, hauling crops, etc.

WALLIS "CUB" TRACTOR

for every traction purpose—turns in the radius of its wheel base which is 9 feet, 4 inches.
Pulls four 14-in. plows anywhere and six 14-in. bottoms in old ground under favorable conditions. Only the finest materials are used, hence it will outlast three cheap tractors. Speed 1 1/2 to 4 miles an hour. Draw bar pull, 4000 pounds, with 25 per cent reserve. And it will do more and better work in a given time.

Mounted on Spiral "No-Shock" Springs which reduce jolting and wear, with consequent easier control. Weight 8500 lbs. 2 speeds forward; 1 reverse. Gears shifted by single lever. Drive wheels, 5 ft. high. Motor completely protected. All parts accessible. Guaranteed. Before buying any tractor, learn about the many other exclusive features of the "Cub." Address 100 Meade St.
