# WHY You Want an

You are sure of a new measure of motor car ability—due to uniformity of torque, resulting in a smoothness of action comparable to the form of steam. The character of the torque is fifty per cent better than in the twin four-and one hundred per cent better than the six or two hundred per cent better than the four. There are six impulses of the crank shaft revolution compared to four in the twin four and three in the six.

Enger Twin Six

A wide range of ability, enabling the car to accelerate rapidly without changing gears, to sweep up steep grades or to throttle down to the slowest traffic without recourse to gear levers.

The maintaining of high speeds without the least vibration.

A noticeable gasoline and oil economy due to the light reciprocating parts plus the higher compression made possible by the smaller cylinder bore and the improved carburetion due to a uniform suction. Tire conomy resulting from uniform transmission of power to wheels.

An ability to run up mileage without appreciable wear in the bearings-to run longer without overhauling and with less attention than any gasoline motor that has thus far been produced.

An accessibility which is superior to the twin four. A shorter turning radius. Improved easy riding qualities.
