Laws for Women and Laws for the Workingmen

One of the arguments against equal suffrage runs like this:

The working women of the country, through their organizations and their friends, are asking for laws limiting working hours and conditions of service for their special protection. It is said a privileged class. But if women demand the ballot and thereby put themneedful things. selves on an equality before the law, they will forfeit their right to have laws passed for their special protection. This argument involves a total misunderstanding of the purpose of all such laws. They are not favors to the class affected by them. They are passed in on the idea that such laws are for the nation. public welfare, and are not favors to a special class.

So it has, in modern times, been recognized as quite proper to pass such laws city, state and nation. for the benefit of workingmen, not because they are entitled to favors, but be-
