

CARRIS

In oil fields gives this company chance of century. Fortunes are made by wise INVESTMENTS DURING HARD TIMES.

HALF MILLION DOLLARS OF NEW CAPITAL WILL BE RAISED FOR QUICK INVESTMENT BY SALE OF STOCK AT SPECIAL PRICE.

In old established Independent Company—to acquire developed and undeveloped oil properties that can now be purchased at 25 cents on the dollar along Company's pipe line and to build big storage tanks and fill them with 30-cent crude and operate our three refineries at increased capacities.

May Open New Oil Fields Within 30 Days

Chance for immediate advancement in the price of stock depends on important test well now drilling. Well may be a failure—it also may be from a 300 to 3,000-barrel well. It is believed to be located right and this company has sufficient acreage around it to develop a fortune making property. If we miss it, in this location, we will drill on some other of the many oil and gas leases of this company.

There is risk to be run in every business, and while some people knock the oil business as risky and uncertain—such is not the result when a company pushes ahead with sufficient capital.

Par value of stock is \$1.00 per share. Special offer to you is 1c per share. Authorized capital of Company is Three Hundred Million shares. Approximately Two Hundred and Forty-six Million shares are now owned by fourteen thousand stockholders, leaving about fifty-four million shares yet in the treasury to be sold for new capital to acquire and develop the company's properties.

This company will accept only \$100,000.00 at the price offered herein—for with this much additional capital now so much headway can be made that the next allotment of stock should sell quickly at from 3 to 5 times this special offer.

To the Investing Public:

This company already owns and is operating one hundred and nine (99) oil and gas wells. Has over one thousand acres of seeded land and several thousand acres of oil and gas leases located through the great oil counties of Osage, Tulsa, Creek and Pawnee in Oklahoma.

It has THREE REFINERIES and a GREASE and PARAFFINE PLANT. They are located at Kansas City, Kas.; Atchison and Cherryvale, Kas.; and Tulsa, Okl. It owns over two hundred miles of pipe line and it will soon have all of the pipe line connecting practically all our producing properties, screwed together and pumping oil from our own wells, connecting and supplying the Tulsa, Okl., and Cherryvale refineries with our own oil. We have our own tank cars and distributing stations and a sales department that can market free of the Trust ten thousand (10,000) barrels per day.

We can now handle about 2,000 barrels per day through our Tulsa and Cherryvale refineries and can in ninety days' time increase the capacities of these two refineries to about six thousand (6,000) barrels per day.

Also, in ninety days' time, with sufficient capital, we could consolidate the Atchison Paraffine Plant with our Kansas City Refinery and Grease Plant and handle three thousand barrels daily at the Kansas City Consolidated Plant, where we have fifteen acres in the Ar-mourdale district, close to the big fuel users.

A Half Million Dollars of new capital now could easily increase the earning capacity of this Company so it could earn good dividends on actual valuation of about Thirty Million Dollars. The people of the Missouri Valley states will do well to place their moral and financial support on a reasonable basis back of this Independent Company.

The Oil Trust is taking advantage of the present depressed business conditions to gobble up, through producing concerns

it finances, good oil-producing properties in the rich Oklahoma oil fields.

Automobile owners and owners of mills and manufacturing who are now securing gasoline and fuel oil cheap should look ahead and realize that already the Trust concerns have control of over a million acres of Oklahoma oil and gas lands. They are working to secure as near all these valuable properties as possible. When the Trust once secures control of the raw product—UP WILL GO GASOLINE TO 20 CENTS PER GALLON, FUEL OIL TO A DOLLAR PER BARREL AND COAL OIL TO 15 TO 20 CENTS A GALLON—and lubricating oil accordingly.

OIL USERS IN THE MISSOURI VALLEY SHOULD BUY THIS STOCK FOR PROTECTION. You can legislate until doomsday, and investigate the same way—but, after all is said and done, there is really but one way to regulate oil prices, and that is for the people to own a big Independent Company that is willing to produce and market oil at a reasonable profit and for every good citizen to insist and demand that the Washington Government does not deliver all the Indian oil lands to the Trust. There are about three million (3,000,000) acres of oil and gas lands under direct control of the secretary of the Interior, appointed by the President and confirmed by the Senate.

The Uncle Sam Oil Company now holds a lease from the Osage Indians on Four Hundred and Thirty Thousand (430,000) acres and is asking that it be validated through congress or by the secretary of the Interior, with a provision written in the contract authorizing the corporation or utility commissions of the states where the oil products from this great government Indian lease is sold shall fix a reasonable price on said oil and oil products, including domestic gas, to the people.

The Uncle Sam Oil Company was organized and built up from the outgrowth of the Kansas Oil War in 1906, when the

Oil Trust defied the Kansas people and raised the black flag in the Kansas oil fields. There is principle as well as financial gain back of this Company and the well-to-do farmer and business man who owns an automobile and does not want 30-cent gasoline, and the mill and manufacturing owner who does not want \$1 fuel oil, and the housewife and home owner who do not want 20-cent coal oil—are all concerned in the success of The Uncle Sam Oil Company as well as the 150,000 domestic gas consumers in Kansas and Missouri that are now threatened with 50 to 75-cent domestic gas, besides a large majority of the public at large that want to see fair play.

With sufficient capital now The Uncle Sam Oil Company can expose and drive to rout any federal official who may scheme to turn over the great Osage oil and gas fields to the Trust and help to directly save this 430,000-acre oil and gas lease that has been proven in federal court was secured on an honest basis from the Osage National Council. With this lease validated in Washington The Uncle Sam Oil Company can furnish sufficient oil to supply Missouri, Nebraska, Kansas, Arkansas and Oklahoma for the next twenty years, besides regulate the price of domestic gas to 10-cent home in Oklahoma, Kansas and Missouri.

A fight against brute power and criminal money cannot be maintained without organization and sufficient capital. There are enough oil users on a big basis in Missouri and Kansas alone to take every share of Uncle Sam stock remaining in the treasury and furnish this company sufficient capital to at once buy up several hundred producing oil wells and the big acreage around them. These properties can be secured with the cash now for about 25 CENTS ON THE DOLLAR.

There are about thirty thousand different automobile owners in Kansas—and it is safe to say that each one of these thirty thousand could remit from \$50 to \$500 each for this stock and hardly miss the money. There are thousands more of the same class of citizens over the adjoining states equally as much interested.

Better combine with The Uncle Sam Oil Company in a successful, practical effort and aid this Company to now buy up 400 or 500 additional high grade oil wells and use your influence to secure justice in Washington, and thereby the validation of the Osage Uncle Sam lease of 430,000 acres—and help build safe and on a big basis one giant Independent Competitor of the powerful Oil Trust. Do not turn a deaf ear to this practical offer and thereby indirectly aid the Oil and Gas Trust to gobble up the rest of the Oklahoma and Kansas oil and gas fields and then skin you and your neighbor by extortionate prices for the next thirty years at least.

Instead, buy this stock and help regulate the price of oil products and domestic gas and insure a profit in your own pocketbook, instead of not locking the barn door until the horse is stolen. There is only one way to fight the devil, and that is with fire. While the big grabbers are preaching the "Me and God" policies in New York, and while their high-sounding statements are being pushed out by news agencies controlled by the Trust to fool the people—this same gang is secretly grabbing the oil fields under panic prices brought about by 30-cent crude and a general frame-up in the Oklahoma-Kansas oil and gas fields.

When this is done they will forget their "pretty talks" and up will go the price of domestic gas to 50 to 75 cents, while poor washwomen cut down the bread supply for the kids to pay gas bills to fill the pocket of foreign millionaire schemers to establish more charitable foundations.

There is a practical way to meet and conquer these conditions and defeat these conspirators. The Uncle Sam Oil Company has made a fight for a real square deal in the Kansas-Oklahoma oil fields now for nearly ten years. It has won out in all persecution and litigation until, by a recent decision of the supreme court of the United States, the most powerful court in the world—the pipe line of The Uncle Sam Oil Company have been exempted from the common carrier at-tempted prohibition. The scheme of the little crooks doing dirty work for the Trust was to include The Uncle Sam pipe line in the common carrier ruling and then flood our pipe lines with production from Trust oil producers in disguise, and thereby keep us from supplying our own refineries with oil from our own wells. But this outrage and latest attempted persecution was defeated. Now the coast is clear and the chance of a century is offered our Company through conditions brought about by the Trust so as to enable its henchmen to buy all good producing property in Oklahoma. It is in this crisis in the oil fields that puts several hundred high grade oil wells and the leases they control on the market under the hammer, where they can be purchased for about 25 cents on the dollar.

Many of these properties either adjoin or are close to our exempted pipe line that connects our producing properties and the two refineries in two states. Even a Half Million Dollars put into new development and for these already proven producing properties can easily increase the real value of this stock in a short time to ten cents per share, and in ten years this very stock, that you can now secure by prompt remittance at one cent per share, may be worth par or one dollar per share, or one hundred times this special offer, and pay you dividends in a few years each year of more than you now need remit to own stock.

ONE SUCCESS GENERALLY FOLLOWS ANOTHER.

No honest citizen can consistently class an investment in this stock as a "wild-

cat scheme," because this Company has demonstrated its ability to protect and build greater even under the most vicious attacks. The truth is the great Oil Trust has about given up hope of ever checking The Uncle Sam Oil Company—and the Trust cannot afford to bid high prices through its henchmen for producing properties or undeveloped leases, and thereby raise the price all over the oil and gas belt to keep this Company from buying up 400 or 500 additional high grade wells along our exempted pipe line and the great acreage around them which deeper drilling may prove up into many millions of value.

Nearly every citizen buys oil products, either at home or in the conduct of business. Why not look a little ahead and put a part of what you will be taxed by high prices on oils by the Trust in the future and protect yourself by making yourself a substantial stockholder in this Company.

MILLIONS MADE IN OIL.

You may say there is a lot of money also lost in oil—but when such is the case it is because a few wise ones thought they could beat the Oil Trust game on a small basis. The business of producing, refining and marketing oil in Oklahoma and Southern Kansas is absolutely safe and will beat any other business enterprise ten to one when backed with sufficient capital. That is the great advantage of The Uncle Sam Oil Company. Our plans from the start were to build up a great Company with sufficient stockholders, so that it could meet and conquer any and all opposition and take advantage of such opportunities as are now offered. It now has the real CHANCE OF A CENTURY—and offers this stock, knowing that there are ten times as many oil users that should own a part of this stock right here in Oklahoma, Missouri, Kansas and Nebraska than is needed to furnish all the capital now necessary. If you are against one little clique of financial pirates controlling all the mineral wealth of the nation and then holding up the well-to-do and the poor alike by extortionate prices—then be practical in opposition to such wrong by lining up with the FOURTEEN THOUSAND STOCKHOLDERS in The Uncle Sam Oil Company and aid in this great effort, and at the same time make credit for helping to furnish new capital to buy up valuable producing oil properties and to develop new production along the Uncle Sam pipe line by sending your check for from \$10 to \$1,000—now when your remittance, combined with others, will soon build up the Company's bank balance—so that every bargain can be accepted.

MAY OPEN RICH OIL POOL IN THIRTY DAYS.

While you are reading this statement the work is progressing on a very important test well on one of our Ranch leases in Pawnee county, Oklahoma. The Uncle Sam Oil Company owns a two-thirds interest in Four Hundred and Eighty (480) acres of leases in this field, including one good well—that has been producing nearly a year—and still flows. There are 490 acres of additional leases controlled by friends of The Uncle Sam Oil Company, which the Company has the future of. The well now under head-way is about one thousand (1,000) feet south of the present flowing well. About a half mile south and a half mile west is a former test well that developed 145 feet of deep sand, with gas on the top.

Other test wells drilled within a mile north and east prove the production must be at the south. Across the Arkansas river three to four miles north-east is the great Boston oil pool. To the south and west about twelve miles is a new field north of Yale. Directly south of the same sections that The Uncle Sam Oil Company's 60-acre two-thirds lease is located in is the heart of the great Cushing oil field. It is vitally more that these rich oil pools are situated more on a north and south line than in any other direction. It is about an equal distance from our Ranch creek location in the Cushing field and the new development near Paden, Okl. Of course, all this is guesswork to a certain extent—but if you wait until this well reaches the proper depth and the district is proven—then it will be too late to secure this stock at several times the present offer.

The Uncle Sam Oil company is a big organization. All we need to make it boom is a few large oil wells. Before this month ends this company may have a 3,000-barrel well at the present location. Even a 300-barrel well would quickly cause more wells to be drilled and soon reach our pipe line leading to the Tulsa Uncle Sam refinery, where we can pump this oil on to the Cherryvale refinery at little expense. We have many locations to drill within a few miles of Tulsa Uncle Sam refinery and also have what we believe are several important leases from twenty to thirty miles a little southwest and southwest of the Tulsa Uncle Sam refinery. Our pipe line from Pawnee county will carry fourteen hundred and forty (1,440) barrels per day to the Tulsa Uncle Sam refinery. Our pipe line from the Tulsa Uncle Sam refinery to the Cherryvale Uncle Sam refinery will carry about three thousand (3,000) barrels daily and can be increased to 4,000 barrels daily by adding two more pumping stations at little cost.

Our plans are to have four feed lines running into the Tulsa refinery from different points in the oil field around Tulsa district. Besides, we will put all the crude we can get through the pipe line to Cherryvale refinery, where we have a splendid market and better freight rates and a big advantage by reason of our exempted pipe line over all competitors.

WOULD LIKE TO START THREE MORE DRILLS.

This company, as before stated, has many important leases and is offered many drill propositions. Oil is cash and we can quickly reach our pipe line from nearly every point of consequence in the central and northern Oklahoma oil fields. When you remit a few hundred or a few thousand dollars for this stock your

money will go to make the very stock you buy that much more valuable. That you may realize what even one small lease is capable of producing, the company heretofore publishes a news report published about a year ago in the Tulsa and Kansas City papers. This news report is as follows:

"WORLD'S GREAT OIL FIELD.

"One Hundred and Sixty-Acre Lease Near Cleveland Produces 25,000 Barrels a Day.

"Tulsa, Okl., Nov. 18.—The bringing in last week of three monster wells with an aggregate production of 10,000 barrels on a lease in the Osage country, near Cleveland, has proven the property to be the greatest producer of high grade oil ever found in the world. The total production of the property is now 25,000 barrels and there is yet room for eighteen more wells, which makes it possible for a production of 50,000 or 60,000 barrels.

"The lease consists of 160 acres and was sold for \$150 a little more than a year ago. It could not be bought now under \$2,000,000 and very likely the owners would not part with it at this high figure."

Should we even develop one forty acres at our present location as good as this Boston pool we could go ahead on a big basis. Where we are now drilling is believed by some to be a southwest extension of the Boston pool.

If we miss it in this location we will continue to drill and some time, probably when least expected, a big, rich pool will be developed.

GOOD PROSPECTS FOR THE FUTURE

There are thousands of investors who can remit from \$50 to \$1,000 and make no material difference with your present business or investments. We would rather have several thousand good citizens remit on a basis of \$50 to \$1,000 and thus combine with our already 14,000 stockholders and add your moral support with your reasonable remittance than to secure a few big stockholders who would look more to the dollar than principle in maintaining and carrying out the real basic principles on which this Company was founded.

We consider the combined value of all our properties, including our trade name, exempted pipe line and established trade at about Four Million Dollars (\$4,000,000). There is issued and outstanding at the present time about \$600,000 of long time bonds and notes, owned almost exclusively by loyal stockholders, on which no interest has ever been defaulted.

The Company is controlled by a Board of Directors of twenty-one stockholders, many of whom own from two hundred thousand to two million shares of the stock.

There is a provision in the charter that protects the Company from Oil Trust control and there is written in each certificate of stock issued under this offer a contract that prohibits its transfer to an Oil Trust crook.

The Company has always raised its needed capital through open and above board advertisements to the independent public. It does not attempt to raise funds from money lenders under Oil Trust conditions, for this Company is a Bona Fide Independent IN FACT AS WELL AS NAME.

The Company makes a sworn report of its business to the United States revenue collector and issues from one to two general reports each month to its stockholders, keeping them fully posted as to what the Company is doing.

Every dollar received by the Company is deposited the same day in the designated depository that was named by the Board of Directors. Each dollar paid out is paid by a check signed by our chief accountant and three general officers of the Company. The Company should receive FIVE CENTS PER SHARE for this stock, but realizing that oil properties can be purchased at about one-fifth value, the Company submits this special offer, realizing that times are hard and big inducements must be offered to secure new capital. We know there are millions seeking investment and as such investors know oil properties are of bottom and that now is the time to invest they are sure to take this stock.

We do not want any "cry baby" investors, either men or women, to remit for this stock. The Company has been slandered by Oil Trust publications in the past and will probably be in the future—and there are always blackmail suits threatened—but we have become used to fighting the wrecking crew of the Trust and no new persecution can be started more dangerous than has been beaten off in the past.

Every such assault on the Company only adds to its friends and influence, but we do not want any traitors in camp, and unless you are willing to join with us in good faith and stand hitched under fire against cheap conspirators and muckraking publications and fake litigation—then we do not want you to remit for any of the stock. If you are true blue we want you with us.

The Company may be able to pay a dividend on this stock in six months, but it might be six years. As stated before, the well drilling may be a three thousand-barrel gusher and make the Company rich, and it might be a small well or a dry hole, but the chances are good, we believe, for the opening of a big new field.

However, with sufficient capital this Company can keep going ahead on a big basis and make a big profit by buying oil wells and leases near our pipe lines. It is determined to raise this capital. If you do not buy this stock

others will. No one ever made a dollar without taking some chances. Wide awake good citizens have invested large sums in this Company because they realize its cause is just and that it must eventually succeed on a big basis.

Be a good citizen and help in a practical way to build up a great Independent Competitor of the Oil and Gas Trust

—and help make The Uncle Sam Oil Company a protection to the Indian tribes—a reasonable profit-maker for its stockholders and blessing to the oil and gas using public in general. Make all remittances payable to The Uncle Sam Oil Company and write your name plainly on the following order blank and the stock you remit for will be properly issued and promptly forwarded to you. Special offer is as follows:

SPECIAL STOCK OFFER

To The Uncle Sam Oil Company, Kansas City, Kansas.

Find \$..... remittance for stock as advertised per X opposite the amount designated below:

- 1,000 Shares \$10
- 2,500 Shares \$25
- 5,000 Shares \$50

- 50,000 Shares \$500
- 75,000 Shares \$750
- 100,000 Shares \$1000

(Name of Remitter.)

(Street, City and State Address.)

In Conclusion

The competition brought about by The Uncle Sam Oil Company fight in the Kansas-Oklahoma oil fields is admitted as having saved the Kansas people several million dollars on oil products during the last five or six years. The same good effect has reached into Missouri, Iowa, Nebraska and Arkansas and Oklahoma.

At first many people thought The Uncle Sam Oil Company could not succeed and Oil Trust publications tried to scare the first stockholders with the ridicule that the Company would never be able to complete the first refinery. But it did complete the first refinery, and built the second and the third refinery, just as it planned at the beginning.

However, the persecution and litigation and interference brought about by Trust influence did interfere in completing a pipe line to Kansas City; but we have built about two hundred and twenty-five (225) miles in the oil fields and between our many leases connecting our one hundred and nine (99) oil wells with the Tulsa and Cherryvale refineries, until now we have a completed property so far as two refineries in two states and connecting our oil leases and wells are concerned.

At present there is about four hundred thousand (400,000) barrels daily oil production in Oklahoma. The Trust bid a price on crude up to \$1.05 per barrel until everyone was drilling, and then hammered the price down until 30-cent crude is being sold in some parts of the oil district.

A lot of producers can market only a part of their oil and many do not know what day the market they have will be lower or cut off.

Along our completed pipe line are several thousand wells within from two to ten miles. Many properties containing hundreds of high grade light producers can be secured at bargain prices. These wells will produce for at least thirty years. We can purchase these producing properties by a substantial payment in cash and then make payments equal to the oil delivered each month until paid for. It is like buying cheap feed to fatten a bunch of home-grown cattle when beef is high for this Company to buy up this developed production along our pipe line, where we already have a completed property capable of refining and marketing right now three thousand (3,000) barrels per day.

We have been offered some big properties in the Cushing field that would have at once filled our pipe line and re-

fineries to capacity upon payment of \$50,000 to \$100,000 cash and the balance in oil. The Cushing crude is about one-third gasoline.

The panic in the oil fields makes cash hard to get and gives this Company a chance to do big things. With our pipe line exempted and our refineries and distributing stations already in operation and ready to handle increased capacities gives The Uncle Sam Oil Company the opportunity it has been building for. We realize times are hard, but fortunes are made by wise investments during hard times, and certainly there never will be a better offer to join in the oil business on a proposition that is on a real business basis. The Company wants to build big storage tanks and will take out the gasoline and cash it and store the valuable by-products and cash to get into storage while oil is at 25 to 30 cents per barrel several million barrels of the by-products which will not deteriorate much after the gasoline is taken out and sold.

This Company is ready to commence making big money right now. It has always raised the funds when it really went after them—and it is going to place this stock and raise this cash for it right among our customers. There are hundreds who will see the real need of helping The Uncle Sam Oil Company secure big producing properties, now so that it will have sufficient crude to operate its THREE REFINERIES and supply the people of Kansas and Missouri and neighboring states for years to come.

This advertisement has been carefully written by the promoter and now president of The Uncle Sam Oil Company and the facts stated here are from years of personal services and knowledge in the Kansas and Oklahoma oil and gas fields. The big fight of The Uncle Sam Oil Company is absolutely won with a little additional capital, and we know that oil users in this Middle West district are not going to see this giant Independent Company want for a Half Million Dollars of new capital when it can be invested in oil properties right on our own line for 25 cents on the dollar and make stock secured worth ten times what you need now remit to own the stock.

A copy of this advertisement, with a personal letter, will be mailed to thousands of mill and factory owners and well-to-do automobile owners over Kansas, Missouri, Oklahoma, Nebraska, Iowa and Arkansas, and if you remit from \$50 to \$1,000 to help push this good work long before the stock advances five to ten times in value you will not be alone. The stock is NON-ASSIGNABLE. Send in your order at once.

Respectfully submitted,
THE UNCLE SAM OIL CO.
By H. H. TUCKER, JR., Pres.
(Address all letters to the Company.)
KANSAS CITY, KANSAS
