the **TOUGH OIL FILM** of the **NEW Polarine**

THE MODERN MOTOR OIL

prevents wear . . . holds power

The new process of refining—developed to produce the new Polarine—provides an oil remarkable for its resistance to heat, cold, pressure and friction.

Its "tough" oil film is due to the removal of every element of an unstable chemical nature. It is the answer of science to the demand for an oil that is all lubricant.

The new Polarine clings to surfaces, maintains its body under all operating conditions, prevents wear, holds all the power behind the pistons. It also stays cleaner because the new Polarine deposits less than half as much carbon as any old process oil.

Unsurpassed by any motor oil, at any price—the modern motor oil—at no advance in price—the new Polarine.

TO SEEK TO COMPLETE GRAVEL

The matter of the graveling of a mile stretch of highway northwest of South Bend, was discussed yesterday by the Cass county commissioners as well as representatives of Saunders county and South Bend. This piece of highway is on the boundary of the two counties, half of the road in each county. The commissioners are meeting the people of South Bend precinct half way on the graveling and this road is not covered by the tax levy and the county donation, so that other means must be found. It was decided that Cass county would pay one quarter of the gravel cost, the residents of South Bend precinct making up another quarter while the Saunders county half of the road will be taken care of by that county. The people of the locality where the road is situated will endeavor to raise the necessary amount to match that of the county. This action is in line with the policy the county to meet half of the costs with the various graveling projects over the county.

Incidentally it was disclosed at the joint meeting that in strictly county graveling and maintained roads that Cass county has eighty-five miles and Saunders some fifteen, this not including state aid or federal aid highways.
