McKelvie said the recognition of sugar beets as a commodity by the farm board would help in carrying out the agricultural marketing act.

Several factors contributed to the sweeping Conservative victory over the Liberal Government in Canada in any land when times are hard, the "outs" gain an advantage over the "ins."

TWO GREAT NEBRASKA CROPS HEADING FOR THE FINISH

Battling valiantly with high temperature and short rainfall, the 1930 Nebraska corn crop is now on the back stretch, straining for the finish.

Thanks to what at the time was considered a severe handicap—a late start—most of the corn has stood the terrific July heat with good account. Drawing reserve moisture from a subsoil that was well soaked with winter snow and fall and spring rains. Recent rains of sufficient amount in some parts of the state have practically assured a good crop, while in other sections damage has been done by the excessive heat. It

is a reasonable truth in Nebraska that the crop is generally better than the pessimists prophesied it would be. It may be taken as assured that there will be plenty of corn grown to maturity in Nebraska in the good year 1930.

The pictures above show a Nebraska corn field and a Nebraska sweet clover field. The sweet clover picture was taken near Hastings and pictures a crop that has a phenomenal popularity in this state. A few years ago a little sweet clover was seen along the roadsides. Now it has reached the dignity of a major crop. At the present time there are 1,126,000 acres of Nebraska land in sweet clover, \$300,000 acres growing alone and

\$26,000 acres being grown among small grain crops such as winter wheat, barley and oats. After the grain is harvested the sweet clover grows and produces a splendid fall pasture or hay or seed crop.

Sweet clover is Nebraska's greatest soil building crop. Some farmers plow it up in the spring of the following year as a green manure crop. As a pasture crop it is most successful. It is an invaluable aid to dairying. Its popularity is attested by the fact that Nebraska has more acres sowed to sweet clover this year than alfalfa, which is a remarkable fact when it is recalled that Nebraska is first state in alfalfa acreage and second in alfalfa production.
