The Work of Postal Department Explained

Postmaster J. W. Holmes in Address Before Rotary Club Tells of Work of Department

The very interesting address given by J. W. Holmes before the Rotary club at their meeting Tuesday noon, has a general value for information that the Journal is much pleased to print in full. The remarks of Mr. Holmes were as follows: Fellow citizens of the Rotary Club: All of you are well acquainted with the United States Postal Service. You not only know its facilities for the transmission of letters, newspapers, articles of merchandise and money, but you know something, I believe, of its history and the details of its organization. It is the only service maintained by the Federal Government with which practically everyone comes into daily contact. In a peculiarly personal sense, it is your service. There is every reason, therefore, that it should follow its activities closely, just as you would if the Department were a business enterprise in which you were a stockholder.

There are about 50,000 post offices in the United States. Of this number about 15,500, raised by the postal receipts of less than \$1,500 a year, are designated as post offices of the first, second and third classes. These include the offices in all cities and the larger towns and villages. The remaining post offices—about 34,000 in number—having postal receipts of less than \$1,500 a year, are designated as post offices of the fourth class. Located in the smaller communities, they are administered by postmasters who are appointed by the Postmaster General from the Civil Service lists and hold their offices for indefinite periods in accordance with the laws and regulations relating to Civil Service appointments.

Quarters for the fourth class offices are provided by the postmaster. They are necessarily primitive, usually being a portion of a general store conducted by the postmaster as his principal means of livelihood. On the other hand, quarters for all presidential post offices—main offices, branches, and garages—must be provided by the Post Office Department. Space must also be provided at large railway centers for the separate and distribution of the "through" railway mail. At the present time, in addition to the 15,500 presidential main post offices, there are about 1,500 branch offices, 900 garages and 64 railway mail stations, for which the Government must furnish quarters. This requires the total of about 18,000 buildings.

In 1,300 of the larger cities and towns the Government owns the post office buildings; and buildings are being constructed in additional cities in accordance with the President's building program, as rapidly as suitable sites can be produced and building plans drawn. Eventually, it is the purpose of the Government to own a main post office building in every community having postal receipts of \$20,000 or more a year—a total of about 2,200 cities and towns in all.

But it is not always economical for the Government to own its own post office buildings. In the smaller towns, for instance, the limited space required for postal purposes can readily be provided in an ordinary store building to be found in almost any convenient business block. More than 9,300 post offices are housed in quarters rented on a month to month basis, for which the Government pays rental at an average rate of about \$40 a month, including the cost of light and heat. About 1,000 of our branch post offices and garages in the larger cities are also located in buildings rented on the month to month basis.

So, when we are considering the question of post office buildings, we find two well defined classes of cases—the larger cities and towns where as a matter of policy the Government owns or expects ultimately to own the main post office building; and, at the other extreme, the smaller towns where it is economical and satisfactory to rent the space required for post office purposes on a month to month basis. Between these two extremes there is a third group of cases—cases where the Government does not own the necessary buildings and where it is not economical or practical to rent suitable quarters on a month to month or year to year basis. The Department now occupies about 6,500 buildings under lease for terms running from five to twenty years. In about 5,000 towns the main post office is located in a leased building. In the larger cities there are leasing more than 1,300 buildings for branch offices and stations, about 100 for garage purposes, and 53 for railway mail stations. Our rent on these 6,500 leased buildings ranges from a few hundred dollars a year to \$380,000, which is the annual rental for the Van Buren Street postal station in Chicago. Our total annual rent bill for the 6,500 leased buildings is approximately \$17,000,000, or an average of about \$2,600 for each building.

The Government can borrow money for 4 per cent, or less, but when it contracts for the construction of a building to be leased for post office quarters, it is the owner who must borrow the money to finance the project, and his interest, including all expenses of financing, will range from 8 to 10 per cent per annum. Moreover, he must, of course, pay taxes on the property, notwithstanding the fact that it is occupied by the Government, and both interest, financing costs and taxes are passed on to the Government in the rental charge. Under these conditions, there is no doubt but that in the period from about 1918 up to the present

time the Post Office Department has in many cases been compelled to pay excessive rentals for the buildings which it has leased for post office uses.

The Government program calls for one-half billion dollars for completion of 2500 buildings by 1937. The Board reports that about 271 million dollars of the program would be completed by 1932. Almost five years ahead of the contemplated time.

Nebraska will get a number of new buildings. Chicago will get a new 21 million dollar building—it will be the largest post office building in the world, and will handle 1,200 letters an hour. It is expected to be ready for business within eighteen months.

We are hopeful that the most perplexing problems will shortly be at an end; that the Government will adopt a policy of occupying any important or extensive quarters which it may require for postal purposes, not as a tenant but as owner. This would seem a substantial saving in money—a saving which in 15 or 20 years would be sufficient to pay the

full purchase cost of the necessary properties. It would mean buildings better suited to the special needs of the postal service. It would mean greater operating efficiency, better working conditions for postal employees, and it would free the Department from the embarrassment and criticism which has naturally resulted from the practice of negotiating with individuals and corporations for the lease of extensive and valuable properties for Government use.

In conclusion, may I say that it is a satisfaction to be able to take our postal problems directly to you who use and support the postal service. I thank you for your interest and your attention.

CHRISTIAN SCIENCE

The subject of the Lesson-Sermon read in all Christian Science churches and societies on Sunday, March 1, was "Christ Jesus." The citations from the Bible show that the spiritual Christ existed before and after the human Jesus, and is available for every human need for all who understand and obey Jesus' instructions. One reference in the Bible reads, "But as many as received him, to them gave he power to become the sons of God, even to them that believe on his name: Which were born, not of blood, nor of the will of the flesh, nor of the will of man, but of God." A citation read from "Science and Health with Key to the Scriptures," by Mary Baker Eddy, (p. 473), states "Jesus established what he said by

demonstration, thus making his acts of higher importance than his words. He proved what he taught. This is the Science of Christianity. Jesus proved the principle, which heals the sick and casts out error, to be divine."

Chicago is getting ready to receive 75 million visitors to its great fair in 1933. It is hoped that peace will be established by that time—or at least a temporary armistice.
