Waste is Seen in Unregulated Federal Plans

Coordination of Government Activities Urger at Affairs Institute

Charlottesville, Va. — Economic planning in fields ranging from Federal Government activities to organized labor in the South were advocated today and yesterday by speakers at the University of Virginia Institute of Public Affairs here.

"A plan for everything and everything in its plan" appeared to be the slogan of speakers following the keynote sounded by Franklin D. Roosevelt, Governor of New York, who declared here at the beginning of the week that waste in this country has run into billions of dollars because of the lack of systematic forethought.

The first step toward a national economic program might well be the formation of a research staff to coordinate the activities of the Federal Government, Charles W. Eliot 2d., member of the National Capital Park and Planning Commission, suggested to the regionalism round table. Separate national agencies are at present carrying out railroad waterway, highway, airway, power and land policies which may or may not be consistent with each other, he pointed out.

"Through the reclamation bureau," he said, "new farm areas are reclaimed, while through the farm board, farmers are urged to restrict their planting."

There would be value, Mr. Eliot believes, in a research staff with authority to collect data and place the facts before interested agencies and the public until Congress and the administration adopt some coordinated national program.

Differ on Regional Planning
A discussion of methods in regional planning showed a diversity of view among the planning experts. A paper prepared by Ernest P. Goodrich, consulting engineer, of New York, advocated a statistical engineering method of determining a region's future needs in homes, streets, schools and parks, by studying of population curves.

Mr. Eliot and others contended, on the other hand, that cities must not be built on the basis of curves and graphs, but a continuation of their past in a way which the public can understand.

"Men build houses and cities, not according to graphs, but according to sentiment," Mr. Eliot declared. Henry Wright, architect and town planner of New York, held that a statistical method of planning is dependable only within periods which are fairly homogeneous economically and socially. He pointed to instances in New York City which made it necessary to deviate from predictions of a purely statistical type.

"The size of city cannot be determined by a superficial area to be filled; it is related to the institutions and functions to be served," Lewis Mumford, architect of Long Island City, N. Y., told the round table this morning. Mr. Mumford forecast that the region will again become the center of organized intelligence as it was in the Middle Ages and will prove itself greatly superior to the merely metropolitan area of today.

"The new regional pattern will be a constellation of related cities, separated by parks and permanent agricultural areas, and united for common projects by a regional authority," Mr. Mumford declared. "Each city," he explained, "would have all the local institutions necessary to its own effective life such as shops, schools, theaters and churches, and in addition each center would perhaps tend to specialize on some one institution of culture or social life, a museum of natural history in one center, a radio broadcasting station in another, a university in a third."

Transportation Changes Need
Modern transportation and community remove the necessity for continuous urbanization, he pointed out, adding that without such a pattern as this "it is impossible to do away with the congestion of the central districts and our present waste of resources in providing temporary palliatives for this congestion." The region, he concluded, is the natural human grouping.

A definite plan for raising the standards of living of southern industrial workers was urged at the industrialism round table by R. T. Bowden of the Virginia Federation of Labor, who asserted that in the rise of southern industrialism wage earners have gone backward.

Wage earners of the South, Mr. Bowden declared, must be permitted to organize into labor unions with programs and policies or they will eventually organize into something not so reasonable and fair in its accomplishments.

"If any part of a group of people working together do not know what they are going to do and how they are going to do it, sooner or later they block the whole undertaking," he added. "This is what happens when wage earners are not planning their next step in prosperity and social progress. The choice lies with the management of industry."

Thomas L. Chadbourne, addressing the institute last night, explained the "Chadbourne plan" which crystallized two months ago into the international agreement between seven great sugar exporting nations. Mr. Chadbourne forecast that the effect of the agreement, which provides for the segregation of sugar supplies and the restriction of output, will be to restore the industry to normal.

Means Happier Conditions
"This," he said, "means a restoration of many millions of people to

prosperous and happy conditions, and if it succeeds may point the way for further efforts of a like nature."

Advocates of collective leadership in each industry are the worst enemies of the Bolsheviks, he concluded.

The rise of unemployment in Great Britain has been sharply checked and slight falls recorded, Ben Bowen Thomas, warden, of College Harlech, in north Wales, told last night's audience, concluding a review of unemployment in post-war Britain. Mr. Thomas divided his country's unemployment into three sections: that to which any industrially specialized country is prone, that of an abnormal post-war period, and that which has arisen since 1929. Of the present 2,000,000 males unemployed in Great Britain, he attributed about 400,000 to normal causes, 600,000 to causes peculiar to post-war Britain, and 1,000,000 to world causes.

Institute members yesterday witnessed the presentation of portraits of former Gov. Harry F. Byrd of Virginia and Rear Admiral Richard E.

Byrd, to the university on behalf of Chester D. Pugsley.

The portraits, the work of Seymour M. Stone, were accepted by Dean Charles G. Maphis, director of the institute.

KIDNAPED MISSIONARY GAINS HIS RELEASE

Hankow, (Sunday)—Oscar Anderson, Lutheran missionary, whose home is in Chicago, has been released by bandits upon payment of ransom of medicines valued at several thousands of dollars. Anderson was kidnaped at Kingchow, Tuipeh, province.

JAZZ-HATING BULLS RUN BAND OUT OF ORCHARD

Parkton, Md., July 9.—Bulls don't like jazz. That was the inference when two of them charged an orchestra at an orchard festival, sent the drummer over a fence, a banjo player up a tree and landed the director in the middle of a creek.
