Messrs. D. Ray Frans and Hallas Banning, accompanied by Mrs. Frans and their son, Jimmie, were over to Lincoln on last Saturday where Mr. Frans was guest at the Shriners banquet. Mrs. Frans and Jimmie were guests with Miss Minnie Wood, formerly resident of Murray and vicinity. A most pleasant time was enjoyed by all.

E. E. Leach was making a feeding floor at his home east of Union and seeking to get the very best of the location, placed it beside the barn and as some of the concrete was poured, the weather settled into a rain and the water poured on the green cement and was still raining the following day, and Ed was fearful that the work was for naught and was waiting until the weather changed to see if he had gotten any results.

Wagon Hit by Car. As one of the wagons which was being used for the gathering of corn, on the Charles Garrison farm and when the wagon was well loaded and was going from the field to the house, a car coming along on the highway, more in a hurry than exercising care, slammed into the corn wagon, causing a great mixup, breaking the wagon and scattering corn over the highway for some distance. It would seem that people could take time to drive their cars with some degree of sanity, rather than endanger their own lives and property and that of others in their hurry to get somewhere when they have nothing to do when they get there.

More Pork Produced This Year than Last

Corn-Hog Ratio Generally Used to Determine If Feeding Is at All Profitable.

The hog grower should try to regulate his hog production in relation to the present and future supply and demand of pork, supply of other competing meats, supply of feeds, and the relation to other farm enterprises, A. G. George of the agricultural college says.

While feed is an important item in determining the extent to which livestock feeding will be followed, substitution of Nebraska's excessive wheat crop will relieve other feed shortages and very little feed will have to be shipped into Nebraska.

The corn-hog ratio, which is expressed by the number of bushels of corn that 100 pounds of live hog will buy, is quite generally used as a guide to determine the profit in feeding hogs. When this ratio stands at 1 to 11 or over, that is, when 100 pounds of live hog will buy 11 or more bushels of corn, then hog feeding is considered profitable. In August the ratio compiled by the United States department of agriculture stood at 1 to 12.3, compared to a recent ratio based on Omaha prices which stood at 1 to 10. The farm ratio is usually wider than the terminal market ratio because it costs less to ship hogs to market than to ship the corn required to fatten the hogs.

Competing Meats a Factor. The supply of competing meats is larger this year than last with the exception of poultry and poultry products. There are larger numbers of beef cattle, but indications point to considerable decrease in feeding operation in the corn belt. The supply of sheep is larger this year than last and mutton and lamb cuts will probably compete with pork on retail market more than they have in recent years.

The number of hogs on farms in the United States is larger than a year ago. The important European hog producing countries also have larger numbers than a year ago. The June pig survey showed an increase for the United States, and also in Nebraska. Indications are that the 1931 fall pig crop is larger than 1930 fall pig crop. Definite figures will be available in early December when the pig survey is released.

The consumer demand for pork was very low during 1930 and has continued low in 1931. The domestic demand is at its lowest level in the last nine years. This decline in demand is due to general business depression, competition of other meats and failure of retail prices to fall with the live hog price. Pork exports have been lower this year than in any of the preceding thirty years. The export demand is likely to continue low due to the large numbers of hogs on European hog producing farms.

Hog production and prices move together in cycles but in reverse order. That is when production is high, prices are low and when production is low, prices are high. Indications point to the fact that we are on the upward trend in production. The
