COMMENTS MANAGEMENTS

NGINEERING NEWS, the lending technical publication in the it il States devoted to the engineering profession reviews at eight the Panama canal situation and tells why, in it opinion, the lock plan is preferable for the canal father than the sen-level iden. The article is written for the general public as well as for engineers, and gives in clear, simple language the essential facts in the controverse and the main points of the

sechnical questions involved. That the decision in favor of a lock cause three years ago was made "in conformity with the weight of the best engineering opinion" is the assurance given at the opening of the review.

Engineering News asserts that no American engineer of high professions standing has lent his name to the camualgn against the lock plan of construction. The review proceeds to a consideration of the report of the board of engineers, which made an examination of conditions on the isthmus, and takes up one by one the arguments against the lock type of canal. For construction alone the engineers on the isilmous "make an estimate of over \$100,000,000 as the minimum excess for cost of a sea level over the lock canal," it is stated. This does not include carrying on the work by the government and sanitation, amounting to perhaps \$3,000,000 annually in addition. There are other additional cost charges and physical problems con-

nected with the proposed change which amount to a formidable aggregate,
Dwelling upon physical problems in the way of constructing the count, Engineering News points out that, although the cutting of the forty mile neck connecting the oceans seems a simple matter to the layman, there are unsolved difficulties in the way of a sea-level canal. The danger of wash along the sides of a long stretch of canal through soft quagmires is dweit upon, when considered with relation to a rainfall of twenty inches or more in one month. Parts of the old French ditch, it is said, actually filled with slit and mud through such causes.

Three virtual canals would be necessary, the review says, abould a sealevel route be chosen—one for the canal proper and two others one on either side, for diversion of the flood waters. That a sea-level cabal is possible, given unlimited money for construction and time, is advitted, but it is argued that such a construction would never be profitable.

Concerning the Gatun lake and dam proposition, the Paview says: "We can testify from actual personal observation and study of the dam site and of the borings and pits that the Gatun dam will be as safe and permanent as any structure ever reared by man. Yet it is need) as for us to say this in view of the emphatic approval of the dam by the board of engineers which has visited the isthmus, and which includes the highest authorities on dam construction that could be found anywere."

Turning to a consideration of the locks themselv's, the Engineering News writer polices out that the "sea-level agitation is a fallacy" in assuming that there is semething objectionable or dangerous to a vessel in passing through a canal lock. "The delay," it is stated, "of a couple of bours or so required to pass through the locks is no argument against the lock system, for this delay-in itself a mere trifle in the course of a voyage lasting itself two weeks or more-will be more than made up by the faster time which ships can make when salling through the broad open channels of Lake Gatun, as compared with the necessarily slow rate of sailing through a sca-level canal."

As for the danger in a lock canal, the review points out that the Manchester canal has four locks and the Sault Ste. Marie canal passes through the greatest lock in the world the greatest canni traffic known. Elaborate provifion has been made in the designs for the Panama locks against accident, and the locks indeed will be in duplicate, so as to make one available

in case of damage to the other. Concerning the possibility of the lock canal being damaged by earthquake, the Engineering News points to the fact that some pieces of masonry in Panama City have been standing since the eighbeenth century unharmed by quakes. It is admitted that earthquake shocks are possible in the canal zone, but it is shown also that any shock severe enough to damage the locks probably would damage also the great Gambos dam, an essential feature of a sea-level canal. Other arguments are brought forward going to show that the lock canal will not only pass all the traffic for which it is designed, but that there will be actual gains in carrying out the lock project.

tion of a wash basin. By giving a independent. I suppose I ought to do rapid rotary motion to the water it is so, for to swing a steel mass 504 feet prevented from escaping through the long successfully around like a monster vent at the bettom until the motion and to make 15,000 tons writhe around slackens, when it escapes slowly, the corners of narrow channels is While the water is revolving rapidly something of an art, after all, and one the vent is open so that a small ob- nor possessed by many of the inhabitject would be able to pass through ants of the globe. freely wthout being retarded in the slightest degree. The invention was in cross section for inspection.

the bullet is not lessened in the least four hours." degree, as the gases have done all their work on the projectile before they

reach the "sliencer." Fortunate is the woman who rememberg that frowns beget more wrinkles argues, unless she will relieve a man than smiles.

Preventing Paint Troubles. It's easy enough to recognize the ayuptoms of poor paint, after it has been on awhile-after its inherent tendency to erack and prel and scale and blister, etc., has developed into trouble. You know these paint "diseases" usually indicate adulteration or substitution in the paint materials. And you know the only remedy is repainting.

A little knowledge of paint and painting requirements, and how to make sure of the purity and quality of materials, would prevent all trouble and save the big extra expense of repainting; just as a proper knowledge of simple health-laws, and observance of them, prevents sickness.

A complete painting guide, including a book of color schemes, specifications for all kinds of painting work, and an instrument for detecting adulteration in paint materials, with directions for using it, can be had free by writing National Lead Co., 1902 Trisity Bidg. New York, and asking for Houseowner's Painting Outfit No. 40.

A very simple guide in the purchase of white lend (the only sure and safe paint material) is the famous "Durch Boy Painter" trademark; that trademark is an absolute guarantee of purity and quality.

INCORPORATES

One of the Important Duties of Physicians and the Well-Informed of the World

is to learn as to the relative standing and reliability of the leading manufacturers of medicinal agents, as the most eminent physicians are the most careful as to the uniform quality and perfect purity of remedies prescribed by them, and it is well known to physicians and the Well-Informed generally that the California Fig Syrup Co., by reason of its correct methods and perfect equipment and the ethical character of its product, has attained to the high standing in scientific and commercial circles which is accorded to successful and reliable houses only, and, therefore, that the name of the Company has become a guarantee of the excellence of its remedy.

TRUTH AND QUALITY

appeal to the Well-Informed in every walk of life and are essential to permanent success and creditable standing, therefore we wish to call the attention of all who would enjoy good health, with its blessings, to the fact that it involves the question of right living with all the term implies. With proper knowledge of what is best each hour of recreation, of enjoyment, of contemplation and of effort may be made to contribute to that end and the use of medicines dispensed with generally to great advantage, but as in many instances a simple, wholesome remedy may be invaluable if taken at the proper time, the California Fig Syrup Co. feels that it is alike important to present truthfully the subject and to supply the one perfect laxative remedy which has won the appoval of physicians and the world-wide acceptance of the Well-Informed, because of the excellence of the combination, known to all, and the original method of manufacture, which is known to the California Fig Syrup Co. only. This valuable remedy has been long and favorably known under the name of-

Syrup of Figs-and has attained to world-wide acceptance as the most excellent of family laxatives, and as its pure laxative principles, obtained from Senna, are well known to physicians and the Well-Informed of the world to be the best of natural laxatives, we have adopted the more elaborate name of-Syrup of Figs and Elixir of Senna-as more fully descriptive of the remedy, but doubtless it will always be called for by the shorter name of Syrup of Figs-and to get its beneficial effects always note, when purchasing, the full name of the Company - California Fig Syrup Co.plainly printed on the front of every package, whether you simply call for - Syrup of Figs-or by the full name-Syrup of Figs and Elixir of Senna-as-Syrup of Figs and Elixir of Senna - is the one laxative remedy manufactured by the California Fig Syrup Co. and the same heretofore known by the name - Syrup of Figs - which has given satisfaction to millions. The genuine is for sale by all leading druggists throughout the United States, in original packages of one size only, the regular price of which is fifty cents per bottle.

Every bottle is sold under the general guarantee of the Company, filed with the Secretary of Agriculture, at Washington, D. C., that the remedy is not adulterated or misbranded within the meaning of the Food and Drugs Act, June 30th, 1906.

Origin of Bog's Names. Spaniels were so called because the original breed of this type came from spain. The Blenhelm spaniel got his

name from Elenheim palace, where this dog first gained popularity in the time of the great Duke of Marlborough. In the same way the King Charles spaniel owes its name to the merrymonarch. Fox terriers did not gain their names from a likeness to the fox, but from the fact that formerly they were used in hunting foxes. Many years ago they were sent by their masters down the fox's burrow to draw and kill their quarry. It was in those days a saying that a good fox terrier never came out of a burrow without

It is put up under the guarantee of the Pure Food and Drug Act. the fox. He either brought out his prey dead or never came out alive him-The bulldog used to drive cattle and was trained to meet the rushes of his enormous charges by gripping them in their most vulnerable spot-the nose. Thus in time he became known as the bulldog. The dachshund is a German dog, and, as his name indicates when translated, was used for hunting badgers. Hence his name-badger dog. Among hunters in the Fatherland this

breed is still popular, although, as a rule, they are now too delicate to face such a feroclous fighter as the badger. Spitz dogs are so named owing to their sharp noses. This is also a German name, spitz meaning sharp pointed. Another name for this breed is Dalmatian dog, because his native home was in Dalmatia.
