Sunken Roman Galleys. Beneath the waters of Lake Nemi, in Italy, lie buried two pleasure galleys. They belonged to the Emperors Tiberius and Caligula, and it is said they contain art treasures that have been covered for many centuries. Systematic efforts were made to recover the contents of the old hulks by Signor Borghi in 1895. Divers were engaged, and the two galleys located, measured and carefully examined, and from both bronzes, pieces of wood, anchors and ornaments of all kinds were collected. The larger vessel measures about 230 feet in length and 80 feet in beam, and the smaller 200 feet in length and 65 feet in beam. Some pieces of lead pipe were found in the vessels. They bear the inscription, "Caesaris Aug. Germanice," the official name of Caligula.

As one grows old the bowels

grow less active. Some then take harsh cathartics, and their bowels harden. Then they multiply the dose. Some take candy Cascarets. They act in natural ways, and one tablet a day is sufficient.

Poetry and Prose.

"What a beautiful sight it is, Mrs. Bates, to see your two little boys always together!" the summer boarder exclaimed, in an erstasy, on the approach of Bobby and Tommy Bates, hand in hand. "Such brotherly love is as rare as it is exquisite.

Mrs. Bates nodded in pleasant as-

"I tell Ezry," she said, "that they're as insep'r'ble as a pair o' pants."

A boy's idea of hardship is to have to wash his neck and ears every day.

LL the development of aeroplaning bring | about a new species of man-a bird man? This is a question which students of human science are asking, as they note the physical and mental peculiarities of those who have been most in the public eye in connection with the advancement of aviation in the field of heavier-than-air machines.

Phrenologists were the first to see the curlous resemblance between the heads of the chief aeroplane inventors, and from this beginning there has grown a more extended inquiry into the reasons therefor. Then, there has been the incidental feature of the possible devlopment, in greater degree, of the same characteristics in others as aviation brings more and more students into

It is possible, therefore, that there is an aeroplane head. While it may be easy to look upon it as a coincidence, nevertheless there are several reasons for thinking differently. The photographs of Curtiss, Beachey, Knabenshue, the Wrights, Farman, Bleriot, Santos-Dumont, De la Grange and others phrenologists declare to show certain qualities upon all their skulls without which they never would have attempted the problems which they have so nearly solved.

The essential feature found in all the aviators whose photographs have been examined phrenologically is a certain width above the eyebrows, which is designated as demonstrating by the study which has been made of the shape of the human head that this peculiar width has always been accompanied in its possessor by a balancing capacity, a steadiness of hand and muscular control and application of the laws of gravity, of motion and of momentum, and is exampled in power to keep the equilibrium while walking on high elevations. in riding a horse, skating, climbing, salling, etc. In addition, it has its bearing on the judgment of weight, of resistance, of density, etc., while giddiness, staggering, liability to fall, seasickness, etc., have been attributed to a lack of this power-at least in considerable degree, or to its temporary disturbance.

All the aviators show the inventor's capacity. The faculty of marvelousness, as the phrenologist calls it, is distinguished in the width above and in front of the

variations in the height of the head, but it is easily to be seen that though, in some instances, the head rises higher, it still has width in this particular locality,

ears. In the individuals given as examples there are

To this quality of marvelousness the phrenologists attribute the imaginative and even inspirational moments which have led these inventors to think of the new things that have been made necessary in their of-

forts to conquer the upper air. A third quality which is discoverable upon investigation of the heads of these conquerors of the air, is that of constructive ability, which is responsible for their ability to carry out a conception once it has appealed to them. This quality is, of course, peculiar to inventors, and its evidence is closely allied in the shaping of the head to the evidence of the faculty of mar-

That the world gradually will develop aeroplane heads as the work of the aviators bring navigation of the air closer to us, is the belief of students of human science, as indicated by the outward characteristics of the skull. Our brains, they declare, have already been considerably modified by the development of the inventions which have been applied to or used in everyday life, and the intense interest in the aeroplane is regarded as likely to have an even stronger bearing on the human faculties than any discovery or invention of the recent centuries. In human science it is accepted that the brain will develop much as the muscle does when demands are made upon it. Muscular exercise brings about an increase in power and in size which we all accept without question. The exercise of the brain along certain lines is regarded as positively having the same effect, though much more slow in making its effects apparent in the outward evidences.

That we shall become a race of man-birds is among the possibilities, and that it will have its effect on the physiognomy is even more certain than the accomplishment of air navigation, for in this we have the precedents of the past to go upon, while in the matter of aviation we can only guess at the future, despite the advancement which has been made.

There has been the bicycle face and the automobile face, but we must wait to determine just what the aeroplane face will be.

"I was sent to write this up; com-LIFE AND SONG. ng in?"

With a gulp Claude assented. In short time they were shaking hands And a wild heart, throbbing in the with their hostess. Claude, following Allan, pressed Mrs. Collum's hand, then the vibrant fingers of Grace.

Her conventional greeting sank to a whisper, and he clung to her hand Type what the poet fain would be; till her low, distressed voice reached

luminate the path when rounding curves, has been patented by an Ohio man. European engineers are said to be

very appreciative of the value of cement grouting for repairing defective masonry, lining wells, and for making tunnel roofs water-tight. In Germany a well polluted by infiltrations was put into satisfactory condition by lowering into it a sheet-iron drum, filling the space between the drum and the walls of the well with Portland cement, and withdrawing the drum after the cement had set. The damaged masonry of a tunnel was repaired by injecting liquid cement under pressure. Air at a pressure of seventy-eight pounds per square inch sufficed to force the cement into place.

A substitute for the kitchen range as a source of supply for het water has recently been introduced in England. An iron block, east round a coil of pipe, is heated by a small electric heater placed in a chamber in its center. Outside the block is a circular tank containing the water, which in its course through the coll is heated. The electric current for the heater comes from the regular house supply for lighting. As the apparatus stores considerable heat, it may be cut off when the current is required for light without seriously affecting the supply of hot water. On the other hand, the heaters may be permanently connected with the electric main, independent of the light current.

A great deal of admiration has been expressed for the feat of the veteran Italian balloonist, Captain Speiterini, who has again crossed the range of the Alps with his balloon, Sirius. On this occasion, early in August, he started from Chamouni with four companions, omething in his eyes made her turn hoping to pass directly over Mont Blanc. But the wind bore the balloon eastward, across the Mer de Glace, round the Alguille du Dru, over the Tour Noir, past the Zinal Rothorn "Yes," she breathed, her delicate and by a sudden leap over the Weiss born and above the valley of Zermatt. Then it passed over the gigantic Dom skirted the towering Matterhorn, and descending on the Italian side, appronched the Pizzo di Ruscada. Night his voice overwhelmed her womanly was at hand and a storm approaching. o Captain Spelterint landed on th edge of a precipice, and the party, after passing the night on the mountain, made the best of their way down to Locarno. The balloon was saved.

The Fountain Head of Life Is The Stomach A man who has a weak and impaired stomach and who does not

properly digest his food will soon find that his blood has become

weak and impoverished, and that his whole body is improperly and

insufficiently nourished. Dr. PIERCE'S GOLDEN MEDICAL DISCOVERY makes the stomach strong, promotes the flow of digestive juices, restores the lost appetite, makes assimilation perfect, invigorates the liver and purifies and enriches the blood. It is the great blood-maker, flesh-builder and restorative nerve tonic. It makes men strong in body, active in mind and cool in judgement,

This "Discovery" is a pure, glyceric extract of American medical roots, absolutely free from alcohol and all injurious, habit-forming drugs. All its ingredients are printed on its wrappers. It has no relationship with scoret nostrums. Its every ingredient is endorsed by the leaders in all the schools of medicine. Don't accept a secret nostrum as a substitute for this time-proven remedy of known composition. Ask your neighbors. They must know of many cures made by it during past 40 years, right in your own neighborhood. World's Dispensary Medical Association, Dr. R.V. Pierce, Pres., Buffalo, N. Y.
