Bridge Grafting. Where trees are found girdled in the spring, the only method of saving pany; them is by the practice of what is known as bridge-grafting.

sert a few long scions, as shown in the accompanying picture. The sap wound made by the rodents, is re- each party may have an original. sumed through the scions, which become a part of the tree-enlarging years, only a slight enlargement or "bulge" on the trank of the tree thus treated will be noticeable.

In bridge-grafting the wounds should be made clean and smooth with

sharp knife and covered entirely with grafting wax. The scions should be cut a trifle longer than the span to be bridged, so that, when they are inserted, their curving form will tend to keep them firmly fixed in position. The two ends of the scions are cut to a thin wedge form. Incisions are made in the bark with a narrow chisel -those above the wound sloping up ward and those below sloping downward. Insert the scions firmly and wax h avily and securely all wounds made in the operation, especial care being exercised to press the wax firmly and neatly about the points of union of scions with the body of the

The Useful Silo.

The silo is a text which is always inspiring to the man who knows its value and it cannot be preached from too often, writes S. C. Miller. Wherever it is seen it denotes farming, It solves the problem of turning into the highest efficiency that portion of the corn crop which falls to reach the desired maturity as feed. The sllo can be filled at less expense than the same amount of dry feed can be cared for and it makes better feed. This is, after all, the main point to consider. Dairymen have learned that when cows are kept in the stable for five to seven months they cannot reurn as satisfactory profits if they are confined to a ration of dry feed alone. Ensilage gives succulence and is very much easier to masticate and digest than dry corn fodder. There is also a great saving of labor in feeding ensilage, over feeding dry corn fodder. The initial expense keeps many a silo from decorating the landscape, but it is good practice to economize in other directions to provide for it. Once built and rightly built it will not have to be renewed for many years, so the cost is spread out so thinly that it of feeding.

Curing a Halter Breaker. Whenever I have a horse that breaks his halter by pulling at the manger I take a small rope, pass it around his tail and through loops on a girth at either side, then on through the rings at either side of the halter and fasten the two ends to the manger ring. When the horse pulls on the

halter it produces such unexpected results that he soon stops this bad habit .- A Benson, in Farm and Home,

Cost of Feed.

During an experiment in Cornell University a few years ago the average feed cost for eggs throughout the year was about 9 cents per dozen Other experimenters give the cost of eggs in winter at 15 cents per dozen and in summer 81/2 cents.. Under the present prices of feed eggs would cost about 12 cents per dozen, but it must be remembered that on the farm the hen picks up the most part of her living from the waste material that is scattered over the farm, so that the cost of a dozen eggs is a very small item of cash outlay.

The Asparagus Beetle.

This is a troublesome pest and hard to fight. Clean cutting, especially in ridge culture, keeps them well under control in spring, but considerable harm is done later on by slugs or larvae. Poultry are very fond of these beetles, and a few fowls will soon capture the matured insects if allowed in a garden bed. An extensive grower of asparagus in Massachusetts finds that most of the beetle eggs have been sucked dry and destroyed by a species pearance for the first time in large and sterilized. numbers this year.

Incubators and Brooders.

The only way to raise chickens in large numbers in a short space of time and have them at the right time to get the biggest prices for them is to use incubators and brooders. By the use of the hen for hatching and brooding, enough chickens can not be raised in a season to make it pay. Many of my customers tell me that they would dressing with chemicals brings a largrather take care of 100 chicks in a er income for the labor employed than

and her brood. You can set as many eggs in a medium-sized incubator as on can put under ten sitting hens. With the machines you have absolute centrol at all times. No lice to fight. No danger of eggs being broken or chilled during incubation. Eggs and correspondence course in automobile work at all compared with the work you.-Agricultural Epitomist.

Renting a Farm. The following is from the Almanae and Encyclopedia for 1910, published by the International Harvester Com-

"The greatest risk is always on the landlord's side in the rental of prop-If young trees be girdled in late erty. He is putting his property into spring just as growth is beginning, the possession and care of another, they may be successfully treated by who may be a person of doubtful atilbinding about the wounded parts a lty. Its stipulations then become commands and can be enforced. circulation of the tree, cut off by the Let it be signed in duplicate, so that

"Be careful in selecting your tenant. There is more in the man than there and growing together until, in after is in the bond. Insert such covenants as to repairs, manner of use, and in restraint of waste as the circumstances call for. As to particular stiplations examine leases drawn by those who have had long experience in renting farms, and adopt such as meet your case. There should be covenants against assigning and underletting.

"If the tenant is of doubtful respon sibility, make the rent payable in installments. A covenant that the crops shall remain in the lessor's till the lessee's contracts with him have been fulfiled is valid against the lessee's reditors. In the ordinary case of centing farms on shares the courts will treat the crops as the joint property of lord and tenant, and thus protect the former's rights. Every lease should contain stipulations for forfeitere and re-entry in case of non-payment or breach of any covenants.

Fresh Manure.

Authorities say that fresh manure loses in the process of decay from 20 to 70 per cent of its original weight. Some tests conducted by the Cornell Experiment Station showed that two tons of horse manure exposed in a pile for five months lost 57 per cent of its gross weight, 60 per cent of its nitrogen, 47 per cent of its potash. Five tons of cow manure exposed for the same length of time in a compact pile lost, through leaching and dissipation of gases, 49 per cent in gross weight, 41 per cent of its nitrogen, 19 per cent of its phosphoric acid and s per cent of its potash.

A ton of average fresh horse manure from animals fed on ordinary balanced ration, contains about 10 pounds potash.

Concrete Platform for Cistern. Make a square box of 2x10-inch stuff, iny size you want the platform. Six feet square is a nice size. Cut out

the pleces as shown in the cut so the frame will fit the crown of the cistern. Clean off all the earth and old matter. Set the frame level and about two inches lower than the cistern curb. This will give fall sufficient to lead all water away from the pump. Make a mixture of coment and sand or gravel. Mix all together, dry, then add water to make a stiff mortar. cuts no great figure in the business Pack in the form and smooth off with a straight-edged board. Run a seam from each corner to the crown to prevent cracking.-Denver Post,

Breeding Against Tuberculosis. W. M. Hayes, assistant secretary of agriculture, declares that there is good reason to believe that domestic animals can be bred resistent to tuberculosis and that in time we may have a breed of animals that are immune from many diseases that are now fatal.

Cabbage Worms. A recommended remedy for cabbage worms is to dust the worms with wheat flour or middlings.

Poultry Pickings. Watch closely and mark the hen that is laying an egg each day. She is the kind you want to perpetuate in the flock. Weed out the hens that lay the

small-sized eggs. They are the unprofitable ones and never will improve the quality of the flock. There are some poultrymen who ad-

vocate pullets for breeders instead of yearling hens. It is generally found that well-developed fowls make the most prolific breeders. If you have both pullets and old

hens in your flock keep close watch and see which one is laying the most eggs. A little knowledge along this line may assist next season in selecting a flock of winter layers.

Hints About the Farm. The four dairy essentials are light ventilation, a proper floor and a comfortable tie.

All cows that are weak, extremely thin and coughing must be removed from the herd.

Planks laid over the cement where the cows stand will prevent injury to the animals. Let the sheep glean over the grain and cornfields if the land is free from

burs and cockles. Pails, cans, strainers, coolers and every other utensil that comes in conof small fly, which has made its ap tact with the milk should be washed

> Farmers who have given cowpeas a fair trial have almost invariably continued their use along with their other staple crops.

Frequent plowing will gave a larger average crop with an equal amount of fertilizer, but it mosts more to produce and is more work to harvest.

With good grass land it is considered that the plan of moderate top brooder than to care for one old hen any other sytem of management.

Earn \$20 to \$50 Per Week.

That is the usual pay for trained chauffeurs, drivers and auto repair men. Some carn as much more on the side selling auto supplies and specialties. For an outline of a complete chicks perfectly safe at all times. No engineering, repairing and driving, such as will fit you to take a position that ten fussy old hens would cause as chauffeur, driver and repair man, write the Atlas Auto Supply Co., 827 Forty-third street, Chicago.

Deafness Cannot be Cured

Deafness Cannot be Cured
by local applications, as they cannot reach
the diseased portion of the ear. There is
only one way to cure deafness, and that is
by constitutional remedies. Deafness, is
caused by an indiamed condition of the mucons lining of the Eustachian Tube. When
this tube is inflamed you have a rumbling
sound or imperfect hearing, and when it is
entirely closed. Deafness is the result, and
unless the inflammation can be taken out
and this tube restored to its normal condition, hearing will be destroyed forever; nine
cases out of ten are caused by Catarrh,
which is nothing but an inflamed condition
of the mucous surfaces.

We will give One Hundred Dollars for
any case of Deafness (caused by Catarrh)
that cannot be cured by Hall's Catarrh
Cure. Send for circulars, free.

Making Progress. Bonser-Been to the automobile show, have you? Decided yet what

kind you are going to buy? Batterson-Not quite; but I'm getting there by a process of elimination. I have examined eighty-seven machines that I have decided not to buy, on account of the nrice.

GERMANY AND CANADIAN WHEAT.

ooks to the Canadian West for Her Supply. A dispatch from Winnipeg, Mani toba, dated March 18, 1910, says that Germany is "anxious to secure a share of Canadian wheat to supply her imports of that cereal." The recent adjustment of the trade relations with Germany has made it possible to carry on a Canadian-German trade with much fewer restrictions than in the past, and considerable development of trade between the two countries is now certain. The great men of the United States are alive to the wheat situation in this country now, and there is consequently the deepest in

terest in every feature that will tend to increase and conserve the wheat supply. With its present 650;000,000 bushel production of wheat and all efforts to increase it almost unavailing, and the rapidly growing consump tion of its increasing population, there is certainly the greatest reason for the anxiety as to where the wheat is to come from that will feed the na as Germany is to look to the wheatfields of Canada. One province alone raised last year one-eighth as much as the entire production of the United States, and but a twelfth of the wheat area has yet been touched. The Americans who have gone to Canada, are today reaping the benefit of the demand for Canadian wheat and they will continue to join in the benefits thus reached for a great many years. Splendid yields are reported from the farms of that country, and from land that the Government gives away in 160 acre blocks, and from other lands that have been purchased at from \$12 to \$15 an acre. John Munter, near Eyebrow, Saskatchewan, a former resident of Minnesota, says:

"Last fall got over 30 bushels o wheat to the acre and had 30 acres of tt; also 20 acres spring breaking on which I had flax of which I got almost 20 bushels per acre. Had 20 acres in oats and got 70 bushels per acre, and 500 bushels potatoes on one and three quarter acres, and can therefore safely say that I had a fine crop and am well satisfied with my homestead."

He is considered but a small farmer but he will be one of the big farmers some of these days. There are many others, hundreds of others, whose yields were beyond this, and whose average under crop was vastly greater. The story of the experience of American farmers in the Canadian West is a long one. The time to go, would appear to be now, when splendid selections may be made, and where land can be purchased at prices that will be doubled in a couple of years.

Aids Nature

The great success of Dr. Pierce's Golden Medical Discovery in curing weak stomachs, wasted bodies, weak lungs, and obstinate and lingering coughs, is based on the recognition of the fundamental truth that "Golden Medical Discovery" supplies Nature with body-building, tissue-repairing, muscle-making materials, in con-densed and concentrated form. With this help Nature supplies the necessary strength to the stomach to digest food, build up the body and thereby throw off lingering obstinate coughs. The "Discovery" re-establishes the digestive and nutritive organs in sound health, purifies and enriches the blood, and nourishes the nerves-in short establishes sound v dorous health.
