The man-eating lions did not always

get their own way. Five Sikh carpenters made a staging eight feet high, and on this they fixed their sleeping tent. Each night they ascended by means of a ladder, which they drew up after them. They were warned that it was not high enough, but were content to believe that God was all powerful. One night they left the edge of the ladder projecting beyoud the end of the staging. A hungry man eater on the prowl observed this and, thinking he could not find a meal more conveniently elsewhere, determined to try how a carpenter tasted. Calculating his spring, he leaned lightly onto the projecting ladder, which, unfortunately for him, instantly tipped up and toppled over, both falling heavily to the ground. The Hon bolted; so did all the men, making for the nearest trees.-From "In the Grip of the Nyika," by Colonel J. H. P. Patterson.

Your Summer Outing.

If you are fond of fishing, canoeing, If you are fond of fishing, canoeing, camping or the study of wild animals look up the Algonquin National Park of Ontario for your summer futing. A fish and game preserve of 2,000,000 acres interspersed with 1,200 lakes and rivers is awaiting you, offering all the attractions that Nature can bestow. Magnificent canoe trips. Altitude 2,000 feet above sea level. Pure and exhilarating atmosphere. Just the place to put in your summer holidays, Good hotel accommodation. An interesting and tel accommodation. An interesting and profusely illustrated descriptive publication telling you all about it sent free on application to W. S. Cookson, 917 Merchants Loan & Trust Building, Chi-

## **GOOD SHORT** STORIES

A member of the Nebraska legislature was making a speech on some momentous question and in concluding said: "In the words of Daniel Webster, who wrote the dictionary, 'Cive me liberty or give me death.' One of his colfeagues pulled at his cont and whispered: "Daniel Webster dld not write the dictionary; it was Noah." "Noah nothing," repiled the speaker; "Noah built the ark."

It was while Charlemagne Tower was ambassador to Russia that a New York City newspaper "spread itself" upon a fete held at St. Petersburg. A green copy-reader produced this result: "As pleasing to the eye as was all this decoration there was additional pleasure in the sight, as one stood at the head of the Prospekt Nevska, of Charlemagne Tower, brilliantly illuminated, looming grand and imposing against the winter sky."

A teacher in one of the lower grade schools was instructing a class in the departments of the national government recently and came finally to the customs department. "When an ocean liner reaches Philadelphia," said the teacher, "a man all dressed up in uniform meets the passengers and takes all they have and inspects it. Now, can any one in the class tell me what that man is called?" A ready hand in the last row flew up. "Well, Tom-"Please, ma'am, he's called a pirate."

William had just returned from college, resplendent in peg-top trousers, silk hosiery, a fancy waistcoat, and a necktie that spoke for itself. He entered the library where his father was reading. The old gentleman looked up and surveyed his son. The longer he looked the more disgusted he became. "Son," he finally blurted out, "you look like a d- fool!" Later, the old major who lived next door came in and greeted the boy heartily. "William," he said with undisguised admiration, "you look exactly like your father did twenty years ago when he came back from school!" "Yes," replied William with a smile, "so father was just telling me."

The dark monarch from sunny Africa was being shown over an engineering place in Salford by the manager, who, in explaining the working of certain machinery, unfortunately got his coat talls caught in it, and in a moment was being whirled round at so many revolutions per minute. Luckily for the manager, his garments were unequal to the strain of more than a few revolutions, and he was hurled, disheveled and dazed, at the feet of the visitor. That exalted personage roared with laughter, and said something to his interpreter. "Sah," said that functionary to the manager, "his majesty say he am berry pleased with de trick, an' will you please do It again?"

Charles Dickens used to relate an anecdote of the last moments of Fauntleroy, the great banker, hanged for forgery in 1824. His elegant dinners had always been followed by some remarkable and matchless curacao, the source of which he kept a deep secret. Three of his boon companions had an interview with him in the condemned cell the day before his execution. They were about to retire, when the most impressive of the three stepped back, and said: "Fauntleroy, you stand on the verge of the grave; remember the text, my dear man, that 'we brought nothing into this world, and it is certain we can take nothing out.' Have you any objection, therefore, to tell me now, as a friend, where you got that curacao?"

It is not that our muse is aby, Or that we fear to make you cry, Or that the price of meat is high-Our fountain pen is running dry-And so are we. -Columbia Jester.

An Acute Sense of Taste. William and Lawrence were in the habit of saving a part of their dessert Farmer. from the evening dinner for consumption the next morning, and in accordance with this custom two small cakes had been placed in the cracker jar for them. William, being the first up on the following morning and being hungry, went to the jar. He found only one cake, and a large place had been bitten out of that. Full of wrath, he went upstairs and roused his brother.

"I did," sleepily answered Lawrence. "What'd you do that for?" "Well, when I tasted it I found it was your cake, and so I et the other

Set the bottles of milk in the pail and fill the pail with water nearly to crease the acreage of a farm is to inthe level of the milk. Put the pail on the stove or over a gas flame and heat It until the thermometer in the milk shows not less than 150 degrees or more than 155 degrees F. The bottles should then be removed from the water and allowed to stand for twenty to thirty minutes. The temperature pond or stream to swim in is all a nowill fall slowly, but may be held more Many of them are raised with uniformly by covering the bottles with perfect success, with no more water a towel. The punctured cap should be than a trough 4 feet long, 1 foot wide replaced with a new one or the bottle and 1 foot deep, and kept filled with should be covered with an inverted water from a well or tank. It is a cap. After the milk has been held as good plan to have an inclosure to condirected it should be cooled. To avoid fine them during the laying season danger of breaking the bottle the wauntil about 9 o'clock each day. In ter should be warm at first. Replace that way the eggs are where they can the warm water slowly with a cold be found and not scattered over the water. After cooling, milk should in all cases be held at the lowest available temperature.

Man and the Rat.

The value of the cream separator is The dominion of man over the beasts eased on the amount it saves out of of the field does not yet include the the loss of the ceram that is common under the old or primitive methods. rodents, says McClure's Magazine. Usually there is a loss of from 25 to Aurochs, cave-bear and mammoth we 60 per cent of the ceram. The cream put down with stone-headed arrows. We have wiped out the buffalo; the separator saves this loss, and, computing that under the average price of lion and the elephant will soon be butter fat the cream separator will gone. But still the rabbits of Aussave the farmer \$10 or more a cow tralla cost the colonies millions : per year, so we see that if the farmer year; traps, ferrets and poison still milks five or six cows he saves enough | fail/to make head against the rats, in one year to buy a cream separator mice and gophers of the United States. While our animal enemies have be come smaller in size, they have grown more numerous. It is as if nature, At the Massachusetts Experiment after trying vainly to chastise her in-Station they have carried out a numsurgent son with a catapult, had gone ber of tests in feeding soy beans to after him with a shotgun. dairy cows. They found that: "Soy

The fact is that, of all warm-blood bean meal did not modify the chemical ed creatures, there are just two that character of the butter fat, neither did are really dominant, successful, increasing in numbers and range, and It have any effect upon the separation able to maintain themselves anywhere time of ripening the cream, nor the in the world against all rivals. These thoroughness of the churning. Expert two are man and the rats. The genus homo and the genus mus go every particular flavor in the butter as a where and eat everything. They are result of feeding the meal. The meal | the two creatures that dwell in houses imparted a noticeable softness to the and travel in ships. Each drives its body of the butter, but not sufficiently other rivals to the wall; but neither, so as to injure its commercial value, except locally and for brief periods, has ever come near to exterminating softness of the body of the butter was the other. Civilized man has fought probably due to the ell contained in the common rat for 200 years, and the the soy bean meal and not to the bean | battle is still drawn.

Tile o'To Joints and Elbows. You may easily join concrete tile to make perfect joints in the following tein feed if fed in not too large quanti- manner: Take the tile that is to join the main drain and with a cold chise West Virginia Experiment Station cut the end so that it will fit over the side of the drain tile.

with several pens of birds and repeatad two years in succession showed an This is easily done by lightly cutincrease of approximately one egg for ting some with a chisel; now place every quart of milk fed, or, to be this onto the main tile at the point more exact, a total gain of 702 eggs it is to be placed, and with a pencil from 802 quarts of milk fed during mark around the outside of the same the experiments. This gave a feed-Then with a chisel, says Farm World ing value of 11/2 cents to 2 cents per lightly cut into the main tile along quart for the milk. In these experithis mark about half way.

When cut entirely through in four or five places on this mark and lightly tapped with a hammer on the inside day for each ten hens. Milk may also of the main tile, the piece thus cut will break out of the main evenly; the edges may be smoothed and the tile inserted in the same, previously crating the edges with cement mortar, and then by wiping the joint with cement mortar outside same, you can make

the joint perfectly tight. Elbow joints are made in the same nanner except that ends of three tiles are cut and joined together to make a segment of the circle, and with the joints sealed with cement mortar a perfect joint may be used.

The tile should be made and allowed to harden for at least thirty to sixty days before placing it in the ground At a period of two days they may be exposed to the weather without injury, and when thirty days old may be taken to the point where they are to be laid, and no amount of freezing will injure them in the least, which cannot be said of the ordinary clay tille.

Henhouse and Woodshed. One man who keeps a small flock of chickens has a unique arrangement in the form of a combination poultryhouse and woodshed. The building is some hing like 20 feet long by about 80 feet wide. It is made of dressed pine boards on a foundation of natur Alfalfa meal as a feeding stuff is al stone laid in cement. TO GET ITS BENEFICIAL EFFECT

"Our little daughter, when three months old, began to break out on the head and we had the best doctors to treat her, but they did not do her any good. They said she had eczema. Her scalp was a solid scale all over. The burning and itching was so severe that she could not rest, day or night. We had about given up all hopes when we read of the Cuticura Remedies. We at once got a cake of Cuticura Soap, : box of Cuticura Ointment and one bottle of Cuticura Resolvent, and followed directions carefully. After the first dose of the Cuticura Resolvent. we used the Cuticura Soap freely and applied the Cuticura Ointment. Then she began to improve rapidly and in two weeks the scale came off her head and new hair began to grow. In a very short time she was well. She is now sixteen years of age and a plo ture of health. We used the Cuticura Remedies about five weeks, regularly, and then we could not tell she had been affected by the disease. We used no other treatments after we found out what the Cuticura Remedies would do for her. J. Fish and Ella M. Fish, Mt. Vernon, Ky., Oct. 12, 1909.
