Closing a switch on the station operator's desk turns on the light which is red and rings gongs on one beat or over a wide area as desired. The attention of the officer on the beat is at once attracted; he opens his box with a special key, answers the telephone call and receives his instruc-

ROUT THUGS BY ELECTRICITY

Nothing Has Done More to Lessen, Grime and Depravity in New York Than Lighting of Streets.

A glowing tribute to electricity as "the best policeman" and "the sworn foe of crooks" appeared, editorially, in the New York Eventag World, as fol-

"Ghosts have fled before the electric light, according to a physician lecturer. Ghosts have disappeared just in proportion as our means of lighting have increased," said the doctor, and went on to point out that unill 1825 people used mainly candles. which, so far from lighting up, make shadows and dark corners all the blacker. Moreover to the old days of draughty corridors and creaking staircases people lay in bed in the dark. listening to noises and imagining spirits. Now we ture on the electric light and that is the and of them

"We owe much to the electric light It has cleared up the slums of our cit- says the Popular Mechanics. The see byways and alleys and flooded them setting the vanes on the guards so with safety and purity. It has routed that one vane acts against the other, thags, prowlers and many other pow- The speed with which the vane tilts ers of darkness. Perhaps nothing has cannot be varied, but the amount of ever done more to lessen crime and de tilt can be regulated by a setscrew on pravity than the street lighting, made | the arm of the gear. possible by the wide use of electricity in cities.

"The arc light is the best policeman on earth. It is the sworn foe of crooks. If it is clearing out the spooks as well, the more credit to it."

Device Can be Used in Factories Among Inflammable Material Without Slightest Danger.

Book binderies, piano factories, brush factories and so on will find the electric giue pot invaluable, according to a Detroit manufacturer.

"There is no risk of fire," he said, "as with pots heated by gas or gaso-

Electric Glue Pot line. The electric pot may safely be

used among shavings or other inflam-

mable material, without the slightest danger of fire." Other advantages claimed for this device are its portability, economy, cleanliness and perfect heat regula-

Electric Soldering Irons. The electric soldering iron has been adopted, to the exclusion of all others,

in one of the largest canning factories in this country. The saving in labor, cleanliness and efficiency are given as the reasons

for the adoption of the electric soldering iron. Plan for "Television."

Brofessor Campbell Swinton, an English scientist, has proposed a new plan for "television," or seeing objects at a distance over a wire, on the principle that we speak over a telephone wire. The process is complicated, but it depends on using cathode rays from a vacuum tube and making them play over a sensitive screen in such a way ha to paint a picture, in light, at a distant station, of any person or object at the receiving station. There is little doubt that within a few years t will be an every day thing to see the face of the person you are talking with over the phone, as well as hear his voice, even though he may be hundreds of miles away.

Electric Rallway for Mexico.

An electric railway is planned to run between the City of Mexico, Puebla, and to the rim of the sleeping volcano of Popocatepetl, which ta 15,500 feet high.

ELECTRICITY FOR FARM USE

Great Variety of Devices Which Outfit of Motors Would Drive Shown at Recent Land Show

At a recent land show, held in New York city, an electric manufacturing company showed, with the co-operation of manufacturers of farming machinery, just what can be done with electricity on the farm. The great variety of devices which the outfit of motors would drive may be seen from the following list:

The farm's water supply was furnished by an automatic pump. A refrigerating machine, milk cool-

er, cream separator, automatic churn and butter worker, bottle washer and ice cream freezer were installed with separate motors in the dairies. An electric truck provided for the

transportation. A large threshing machine, with motor drive, illustrated what could be accomplished by the application of motors for outdoor machinery.

Corn shellers and feed choppers equipped with individual motors showed how the smaller machines may be operated. Types of laundry machinery driven

by individual motors. An electrically driven milking machine

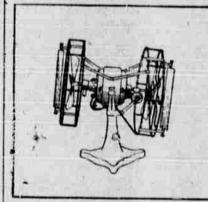

A silo with an accompanying motor-driven silo filler was exhibited. A sheep shearer, electrically driven through a flexible shaft. This device could also be used for grooming horses or cattle.

Ventilating fans, household equipnent, cooking devices and the supplanting of the old ell-dripping lantern by electric lamps or an electric torch completed this unique exhibit. In practically every place where muscular energy has hitherto been expended on the farm, electricity is taking its place. The use of electricity is such a constant source of economy that a complete equipment soon pays for itself.

UNIQUE ELECTRIC DESK FAN

Two Sets of Blades Are Employed Instead of One and in Addition Has Seesaw Motion.

An electric desk fan with two sets of blades instead of one has recently appeared on the market. It revolves in a circle, and, in addition, the fans tin or seesaw while the head revolves
