AFTER HE HAD COUNTED THEM

His Companions Safe, Philadelphia Man Was Satisfied That He Had Really Shot Buck.

Thomas Martindale, the Philadelphia moose hunter, said, apropos of the opening of the deer season:

"Buck fever is a strange disease.

The victim of it does some remarkable things. A Philadelphian was deer hunting in Maine. He shot four or five shots

into a thick copse, and then he shouted: "'All of you come out of there!'

"Half a dozen sportsmen issued

from the copse hurriedly. "'Are you all out?' said the Philadelphian. 'One, two, three, four. Where's Jake? Oh, there you are, Jake. Are you all out, sure?'

'Yes,' they answered. 'We're all out; the whole party's out.' 'Hurrah, then!' shouted the Philadelphian. 'Hurrah! I've shot a buck!' *

PLAN FOR BUILDING A SILO Illustration Shows How Inside Sheet-

ing and Beveled Lath and Cement Are Used.

a silo 12x28, about 24 feet above veins and good sized teats. Her head ground, Hoard's Dairyman makes the following reply:

One-half inch lumber will give fully as good, if not better, service than rather long and lean in appearance. inch lumber. The accompanying illustration shows how the inside sheeting and beveled lath and cement are used in a silo of this kin 1. The 2x4's may be set on the foundation 16 inches from center to center. We like the beveled lath as suggested in the drawing, for it adds strength to the silo.

End Vlew

We know of some instances where common lath has been used, but it seems to us better to use the lath made from one-half-inch material.

The 2x4's will not need any sort of fron hoops. The inside sheeting and ping; provided a device detachable the beveled lath are strong enough to resist all lateral pressure. If inch lumber is used and lath as suggested, it would be well to put on the outside some wooden hoops three feet apart. These hoops may be nailed to the 2x4s.

The capacity of the silo is sufficient for 15 milk cows. We believe that a silo 11 feet in diameter and 30 to 32 feet high would be almost better to construct, for it is necessary to remove about one and one-half to two inches of silage per day, especially & summer, if it is to be kept in good

ROOT CROPS FOR DAIRY COW Make Valuable Addition to Winter Ra-

tions Because They Add to Variety of Feed, No matter what some people tell

milk producing feed. Turnips will not affect the flavor of milk if fed the size of the teats; and provide a at the right time. If turnips are fed in large quantities and two or three hours before milking, they are likely to give the

milk an unpleasant taste, but if fed directly after milking no flavor whatever will be noticed. A peck of turnips to each animal per day is sufficient in most cases. A

in the early morning, and once a day is often enough. A little salt scattered over the quarters or smaller, add to their

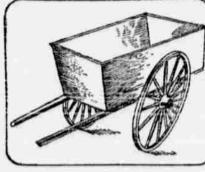

palatability. Roots make very valuable addition to the winter ration because they add to the variety of the feed and no animal on the farm appreciates variety more than the dairy cow.

In Wisconsin, Iowa and other western dairy states the root crop is becrop of the farm.

CONVENIENT CART FOR MILK

Two Buggy Wheels and Axle Used in Its Construction-Handy for Carrying Fertilizer.

I saw a home-made cart, made from the two wheels and an old axle of a buggy, says a writer in the Rural New

A Handy Milk Cart.

Yorker. It was used to wheel three cans of milk and feed or fertilizers around farm or barn. The illustration shows how it was made.

Silo Is Money Maker. The dairy farmer who does not build

a silo thinks he is justified in following his policy, but the longer he puts it off the less money he will

Good Separator.

A good separator, when properly handled, should not leave more than .05 per cent. of fat in the skimmilk. This means that but I pound of fat is left to every 200 taken out.

Avoid Germs. The first few squirts of milk drawn

from the udder may have germs in them, as they might get into the ducts. If you are very particular milk these on the ground before milking into the pail.

Get Best Cow. Like a dairy cow, the best way to get a high-class farm horse is to raise him.

BREEDING STOCK FOR DAIRY

n Selecting Cattle Real Test Must Be Scales and Babcock Test-Conformation of Cow.

Professor W. J. Kennedy of the wa station recommends the followng in reference to the selection of breeding stock for the dairy:

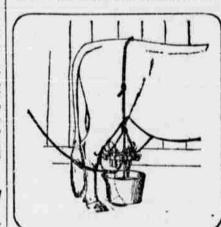

In selecting dairy cattle the real test must be the scales and the Babcock tester. The cow is a machine to convert food into milk, thus she must have a large middle and a strong constitution to insure the best results. She must also have a large udder, In response to a query for building large milk wells, large crooked milk should be clean and angular in appearance, with the eyes standing out prominently. The neck should be The shoulders pointed, and the backbone rather prominent. The skin should be loose and soft to the touch. In selecting herd bulls, either mature animals which have already demonstrated their worth as sires, or younger animals from high testing dams and sires only should be used. The best and surest results will always follow the use of a mature sire which has sired heifers with good records. A good dairy bull should be kept until he is 12 or 15 years old, in fact as long as he is a sure sire, Real good sires are so rare that when we do find one, he should die only of old All breeders of dairy cattle should secure yearly tests on each and every cow in the herd. Shorter tests do not really mean very much. It is the cow that stays by her job that is really valuable.

MILKING MACHINE IS HANDY

Operation Performed by Compression in Device Recently Invented by Wisonsin Man.

The Scientific American in describing a milking machine, recently invented by O. C. Sibilsky of Algoma,

Wis., says: The invention pictured in the illustration in actual use, provides a machine which will cause the milking operation to be performed by compression rather than by suction or stripso as to accommodate it for use in connection with different size cows or

Milking Machine

those having different size udders; you, turnips and other roots make provides an actuator for the milker which is adjustable in acordance with pression cups are formed and operated so as to simulate the form and operation of a person's hand in hand

Keep Calves Well Bedded.

The stomach of the little calf is very sensitive and easily ruined. Nothgood plan is to feed directly after hay ing will do it quicker than keeping the animal confined in a wet, dirty pen. Clean the calf often and bed it with a liberal supply of dry straw oftener. turnips, which should be chopped in It is no little labor to keep a stall where several calves run clean and dry, but there is no other way if you want to raise good calves. Eternal vigilance is the price of everything good in the stock line.

Making Stables Comfortable. Stop the cracks and chinks in the stables. The horses and cows will not coming a very important part of the get cold outside if it isn't raining, but in the stable, with the wind blowing in through some little hole, they will actually suffer. Get in a warm room and let the cold air from outside reach you through just one little opening if you don't believe it.

Economy in Liberal Feeding. Economy on the farm, as well as in all other business, is admirable, but economy demands that you get every drop of butter fat possible from every cow. In other words, the greatest economy comes from feeding the cow to her greatest capacity and having a cow which will make the best use of her feed.

Beef is high, but butter and cream are higher. Silage may be fed the day after the silo is filled.

Thoughtful dairymen will keep up the milk flow this fall. Back of many a shortage in the dairy business is a poor sire. Separating cold milk means that

milk: Dirty calf pails are one sign that the calves are not getting care enough.

some cream will remain in the skim-

If the hired man is careful with the cows a few of his faults may be overlooked. To get rich milk is possible for the

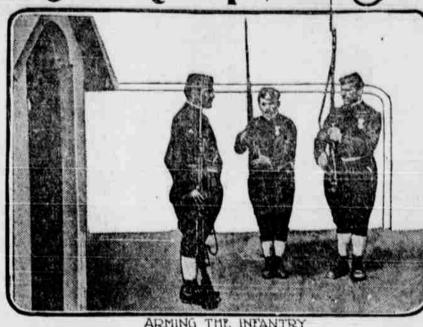

average farmer, but it must be through To get top prices for farm crops, try selling them to the dairy cow or

the shoat. A good many cow stables resemble hotels. They have both "roomers" and 'boarders." Shade, water and good grass are

three essentials for profitable milk production. It is highly important to feed producing cows some concentrated feeds in connection with pasturage and

roughage. You are making your dairy cows now while the helfer calves are less than a year old. Be liberal with shelter, liberal with all sorts of kindness.

ARMING THE INFANTRY

There is not much of the formality

of a European capital about Cettinje.

The reiging monarch can frequently

casual conversation with one of his

subjects, in very much the same pos-

ture as that of a Third avenue tene-

ment dweller, who watches the ele-

vated railroad trains go by. The

principal hotel of the town is kept

by a magnificent man, who at the time

of my visit was minister of war. The

conduct of his hotel was decidedly un-

ceremonious, except that the Austrian

minister and the Italian minister ap-

pear for dinner every night in

full dress. Probably each one felt

that the dignity of his country must

be maintained at all hazards, and

neither one could take it on himself

to suggest a sartorial disarmament.

Strict formality is exercised in some

branches of the government; a tele-

gram which I sent to the telegraph

office at nine o'clock one morning was

returned to me unsent at five o'clock

that afternoon with the criticism that

DECLARATION of war is al- | against far greater neighbors, whose ways a serious matter, but rapacity for territorial expansion is In one who has been on the too well known to require comment. ground, the news that Mon- In her sturdy spirit of self-defense littenegro had declared war the Montenegro leaves naught for against Turkey inevitably aroused a criticism. modified merriment. Subsequent proceedings have reduced the element of comedy materially, but when the little mountain kingdom first | be seen leaning out of a window in stood forward against the Porte, the two antagonists offered a sufficient contrast for smiles at least. Considering the size and resources of the two antagonists, it is very much as if New Rochelle declared war on New York in the hope of capturing and annexing Yonkers, the last-named city being represented by Scutari d'Albanie, a place about ten times as large as the Montenegrin capital, and one which the Montenegrin monarch has always

Contrary to current impression, Montenegro is not at all difficult of access. Excellent steamships take one from Trieste down the picturesque Dalmatian coast and disembark one at the town of Cattaro, which lies at the head of the lovely bay of that name. A mile or two back from the bay rises a steep, stony mountainwall, with a smooth, white military road zigzagging laboriously up it, and over that mountain range is Monte-

The drive from Cattaro up to Cettinje is one of the most beautiful in | Every man is expected to carry arms, the world. From the mountain-top, and, in fact, it is against the law to west over Cattaro and the smiling go unarmed. Even the clergy are not bay and the sparkling blue waters of excepted from this rule, yet a stranger the sunny Adriatic, and east across the | can hardly help feeling surprised when great, gloomy, desolate gray mountains, the views are remarkable. In church in his professional robes, but my opinion, this drive is far finer than with a couple of enormous revolvers the much-lauded Upper Corniche, bestuck in his belt. I heard of but one tween Nice and Monte Carla. Until | fatality during my stay in town, and quite recently the drive by carriage that was when a somewhat exhilartook seven hours, but now one can go by motor car.

Some Royal Financing. Motoring in Montenegro has, how-

ever, its limitations, as there is probably not a road in the country, except the one previously mentioned, over which an automobile could pass. Even the Cattaro-Cettinje road is hazardous enough at that, because on it there are no less than one hundred and thirty turns so acute that a car with a long wheel base finds difficulty in negotiating them at all, and most of these turns are on a considerable

grade. Once over the mountain and across the Montenegrin frontier, the first impression is that of the absolute desolation of the country. Nothing but bleak, gray, stony mountain ranges, one after 'he other, as far as the eye can reach into the misty dis-'tance. Not a habitation, not a tree of any size, not a sign of life. The outlook suggests an imaginative litho- Hans Memling, is a small panel, ten graph of the beginning of the world. Only one evidence of humane existence is seen. Along the roadside are numerous flat-bottomed pockets of Philippe le Bon, duke of Burgundy, is land, where a little cultivable soil has twelve and a half by ten and a fourth washed down the rocky stopes, and in inches, each of these pockets a few potato plants have been carefully set out. | canvases has not been announced, it Often the pocket is so small as to contain only a dozen plants, but in a land so sterile and stony every square foot of soil is thriftly utilized. No houses are visible, and people must come miles to cultivate these struggling patches.

A Homely Mountain Village, Cettinje lies in the middle of a small, fertile plain which was once the bed of an ancient lake, surrounded by grim hills. It is a town of about thirty-five hundred inhabitants-hardly more than a village-and yet it is the capital of a nation that has for generations preserved its identity
