Four Elements Especially Important in Farming.

Most Marked Difference Setween Rich United States patent office. It is the and Poor Land Lies in Content of Nitrogen and Humus-Legumes Require Bacteria.

Plants need food of different kinds, very much as do animals. That is, a hay to the sides and away from the plant will starve if deprived of any center in order that the barn may be one of several substances in the soil, filled. just as a man will starve if he tries

to live on fat meat alone, or on starch consists of a tilting platform which alone, or on sugar alone, or, for that is secured to the timbers entering into matter, on all three of these articles the construction of the barn so that it

of food, because they lack the element that makes blood and lean meat and which is found in eggs, milk, beans, and the like.

The elements found in the soil which are necessary to plants are nitrogen, phosphorus, calcium, potasslum, magnesium, sulphur and iron. Those that come wholly from air and water are carbon, hydrogen and oxygen. The latter group makes up the bulk of the dry substance of plants, or ninety to ninety-nine parts out of one hundred. The element nitrogen can be given an intermediate place because the original source of

the soil nitrogen is in the air. Also certain kinds of plants, the legumes, are able to utilize atmospheric nitro- may be moved along to any desired gen, though this is done indirectly, through the nodule-forming bacteria the load is dropped from the latter found in their roots.

"Aren't you afraid to run about in your bare feet, over such a rough pavement?" was asked of a fairylike little maid, whose snowy "tootsies" betrayed their unaccustomed contact with the coarser things of earth. "Aren't you afraid you'll get cut or wounded?"

"Yes, a little," returned the child frankly, "but, if I do, it's no matter. My papa's a doctor, and getting mended up again won't cost anyone a cent!"

Superseding Europe.

For the manufacture of pottery of the better grades considerable clay, mainly kaolin, is imported into this country from Europe and China, the value of these imports last year exceeding two million two hundred and fifty thousand dollars. It seems probable, says the United States geological survey, that under the necessity due to the war of now finding a domestic supply these finer clays can be in large part replaced. Already a process of decoloring kaolin is reported as successful, and this may make large deposits of kaolin and ball clay available for the manufacture of white ware and pottery.

Fire Threatened Reims.

Reims cathedral had a narrow escape from destruction in July, 1481, when some plumbers, who had been mending the roof, left a braiser, half extinguished, among the timbers. The following morning smoke and fiames were seen issuing from the spire which crowned the choir of the cathedral. It was late in the afternoon before the flames could be extinguished, and by that time the central spire, most of the roof and the transept gables were completely_destroyed. Louix XI was so furious when he heard of the catastrophe that he announced his intention of evicting the canons of the cathedral, LIVER PILLS are through whose negligence the fire was said to have spread, and putting not only give relief monks in their place.
