ALFALFA FOR COLTS

Alfalfa makes an excellent pasture for developing young horses. After July 1 blue-grass pastures generally get pretty short and by turning colts on alfalfa they will have an abundance of putritions food for the Dakota City correctors. Then work horses on alfalfa from now on. This is especially true where they can be turned out every night. There is no feed quite so cheap as alfalfa in Nebraska, and it materially economizes the cost of producing and

BEEF, NEBRASKA'S OPPORTUNITY falfa. Therefore, it may be said Grandma Ashford of Homer. that with the possible exception of Kansas and the plains reigon, Ne-

clared by the department of Horti-culture at the University Farm to some alfalfa that was ready for the have been favorable for the develop- reaper ... F. F. Haase and Dr. Evment of apple scab, and a spray should be applied at once. The spray may consist of Bordeaux mixture or commercial lime-sulphur. Most commercial brands of the limesulphur should be diluted 30 times before being used as a summer spray for apples. The Bordeaux mixture consists of four pounds of copper sulphate, four pounds of stone lime, and water to make 50 gallons. To make the mixture, slake the lime in a little water and dissolve the copper sulphate separately in warm water. Dilute each of these to 25 erson, but the best wishes of all go gallons and pour them together. A with them, and what is Emerson's fine strainer should be used to keep loss will be Ashton's gain. the coarse particles of lime out of the sprayer. Lead arsenate at the rate of two and one-half pounds to Hoyt, with a handicap of four birds, 50 gallons of the above should be ad- won the monthly shoot of the Crysded to control the codling moth tal Lake Gun club Sunday afternoon. SOIL MOISTURE INCREASES OVER

THAT OF PAST YEARS The soil is better supplied with moisture than it has been for the past two or three years, according tal Lake Gun club has been increasto soil moisture determinations made at the University Farm during the first week in June. Owing to the nature of the precipatation during the past few weeks, a large percent has entered the soil of the pastures, grain, and aifalfa fields, while in the cornfields there has been more run-

Previous to the last three weeks, the moisture content of the wheat and alfalfa fields was becoming rather low. During the last two months and a half the wheat had reduced 25 birds. George Krueger, a new the moisture content almost eight per cent in the upper six feet of soil. the most of this loss being confined to the upper three feet. A similar loss had taken place in the alfalfa fields, altho it had affected the entire six feet of soil. With the recent rains. the moisture content of all the fields has been increased, but early in June it was not as high as it was in the early spring.

In the oat and cornfields, where the crop is not far enough advanced to draw heavily upon the soil moist-ure, there has been very little change. The recent rains have supplied these fields with all the moisture they will hold thru the entire upper six feet of soil.
