was especially notable because it followed the route on Pennsylvania avenue taken fifty years ago by the grand review of the armies at the close of the Civil war. The illustration shows, above, William McKinley post of Canton, O., carrying the largest flag in the country, nearly 150 feet long; below, the Second New York regiment, which was in full-dress uniforms and bearskin shakos.

Wireless in Future.

Hundreds Will Be Able to Talk at Same Time Through the Earthfitatic Disturbance Eliminated by invention.

New York .--- Nikola Tesla announced that he had received a patent on an invention which would not only eliminate static interference, the present bugaboo of wireless telephony, but

would enable thousands of persons to talk at once between wireless stations and make it possible for those talking to see one another by wireless, regardless of the distance separating them. He said also that with his wireless station now in the process of construction on Long Island he hoped to make New York one of the central exchanges in a world system of wireless tele-

phony. Mr. Tesla has been working on wireless problems for many years. Recent-

ly he exhibited an article published in the Electrical World eleven years ago, in which he predicted not only wireless telephony on a commercial basis but that it would be possible to identify the voice of an acquaintance over any distance. That its operator in

Hawali was able to distinguish the volce of an engineer friend at Arlington, Va., was announced by the American Telephone and Telegraph com-

pany as the most marked triumph of its communication by wireless telephone from the naval radio station at Arlington to Pearl Harbor, Hawaii, a distance of 4,000 miles.

The inventor, who has won fame by his electrical inventions, dictated this statement:

"The experts carrying out this bril liant experiment are naturally deserving of great credit for the skill they have shown in perfecting the devices. These are of two kinds: First, those serving to control transmission, and, second, those magnifying the received impulse. That the control of transmission is perfect is plain to ex-

perts from the fact that the Arlington, Mare Island, and Pearl Harbor plants are all inefficient and that the dis-

tance of telephonic communication is equal to that of telegraphic transmission. It is also perfectly apparent that the chief merit of the application lies

in the magnification of the micro-

# When Health is Wrong The Pay is Short

Getting ahead in this world calls for mental and physical forces kept upbuilt and in trim.

Often the food one eats "makes" or "breaks"-it depends upon the kind of food. In many cases the daily dietary lacks certain essential elements for keeping brain and body at their best.

Over 18 years ago a food was perfected to offset this lack -

-and it has stood the test of the years.

Made of whole wheat and malted barley this famous pure food supplies all the nutriment of the grains including their mineral salts-Phosphate of Potash, etc.-necessary for building brain, nerve and muscle.

Grape-Nuts has a delicious nut-like flavour; is always ready to eat-fresh, and crisp from the package; so thoroughly baked it is partially predigested.

Thousands "on the job" every day know

matter of fact, there is no static disturbance possible in properly designed transmission and receiving circuits Quite recently I have described, in a patent, circuits which are absolutely immune to static and other interfer ences-so much so that when a telephone is attached, there is absolute silence, even lightning in the immediate vicinity not producing a click of the diaphragm, while in the ordinary telephonic conversation there are all kinds of noises. Transmission with out statle interference has many wonderful properties besides, first of which is that unlimited amounts of power can be transmitted with very small loss can be no secrecy in wireless tele

phone conversation. I say it is absurd to raise this contention, when it is positively demonstrated by experiments that the earth is more suitable for transmission than any wire could ever be. A wireless telephone conversation can be made as secret as a thought. "It's all a wonderful thing.
