**DASHEEN A TUBER
MUCH LIKE POTATO**

The dasheen, a root crop introduced into this country from Trinidad within recent years by the United States department of agriculture, is now grown by a considerable number of farmers and truckers in the south and promises to become a valuable member of the group of domestic vegetables, such as the potato, which furnish starchy foods. The dasheen is itself primarily a tropical plant. It can be grown successfully, however, not only in the warmer portions of Florida, but in other sections of the south as far north as South Carolina. The edible portion of the plant includes a large central corm and a number of tubers, of much smaller size, attached to and around the corm.

In food value the dasheen is comparable to the potato, though it contains a small proportion of water and a greater proportion of protein, starch and sugar than the latter. The new vegetable may be prepared for the table as potatoes usually are or may be made into flour and used in baking.

The dasheen is grown from whole tubers weighing a few ounces. They require a frostless season of at least seven months with plenty of moisture. A moist but well drained, rich, sandy

CLUMP OF DASHEEN TUBERS.

loam has been found to be satisfactory soil for dasheen culture. A large proportion of either clay or muck in the soil produces strong flavored, tough corms which are often unfit for table use. Large crops are produced under such conditions, however, and make excellent stock feed.

The crop is planted in February in southern Florida and as late as the early part of April in South Carolina. The plants are spaced about 3 1/2 by 3 1/2 feet. Dasheens may be dug for home use by the middle of September, and the main crop can be harvested at any time after the last of October.

Silage Keeps Two Years.
Referring to silage carried over from one year to another, M. N. Nathaniel of Henderson county, Ill., reports in the Drovers' Telegram that he had silage left in the spring of 1914 which he fed out in the early months of 1916. The only waste was a thin crust on top. "The silage was just as good as though it had been put in a few months previously," he said. "This is one of the great advantages of this feed."

- AROUND THE DAIRY.**
- Fear, cold, any kind of discomfort, is expensive in a dairy herd. Comfort always means profit. It is up to you if your cows do not turn you a profit.
 - Never mix warm and cold cream or sweet and slightly tainted cream.
 - Wooden pails should not be used for milking, as they easily become sour and cannot be thoroughly cleansed.
 - No loud talking should be permitted in the stable, and it is best that the cows be milked by the same persons in the same order at each milking.
 - Regularity in milking aids in developing a tendency to prolong the period of lactation.
