The results of the tractor testing work, as conducted under the provisions of the Nebraska tractor law, have been published by the state college of agriculture. The report shows that 65 models were tested last year. Applications for tests were received for 103 machines, but 35 of this number withdrew without appearing for test. The draw-bar pull and the belt wheel capacity of the tractors were tested to determine whether they were being properly rated by the manufacturers. Tests were made under varying conditions, and fuel consumption, adjustments and other factors noted. Copies of the report may be obtained by asking for bulletin 177, "The Nebraska Tractor Tests."

### Lutheran Church Notes

By Rev C. R. Lowe.

We will celebrate the Lord's Supper at Salem on Friday night. Our members will please make an effort to be present. This Good Friday service is an experiment, for a mid-week service. Let us honor our Lord by our presence at this time, while we are keeping the day commemorating his death, let us "show forth his death till he come" by our celebration of the holy communion which he instituted for this very purpose.

On Easter Sunday morning there will be given a program by the Sunday school, to which you are invited. Let us be glad and rejoice in this day and what it means to us. Let us be at our place in the church services that we may honor God.

The pastor and family visited the Lutheran services at Homer last Sunday. There were thirteen baptisms and three confirmations.

Rev. W. T. Kahse of South Sioux City, took supper with Rev. C. R. Lowe last Monday night.

Rev. C. H. Lewis of Emerson has resigned the pastorate at that place, to take effect June 1st. He goes to Evanston, Ill.

### Sudan Grass Growing in Favor

Sudan grass as a hay crop is becoming popular in several sections of Nebraska. The college of agriculture recommends it particularly for the central and western parts of the state. While it does not yield quite as well as sorghum cane, it is much easier to handle. It will grow on about all kinds of soil, although it will not do well on cold, wet, muggy ground. Likewise, it is not considered profitable on alkali soil. Where there is much alkali sweet clover had better be grown. Those interested in meadows, pasture, and hay crops should ask any County Farm Bureau office or the College of Agriculture for a list of free publications on Sudan grass, sweet clover, alfalfa, soy beans, clover, etc.

### DO MOST WORK ON THURSDAY

Statistics Show That British Factory Employees Are at Their Best About Midweek.

What is the best workday in America? In England it is Thursday.

That is the finding of industrial research board investigators of that country. The London Chronicle reports that over a period of twenty weeks the output was registered and "graphs" were made.

The workers gave their best on Wednesdays and Thursdays, but the output on Saturday was invariably low. When doubled (to equalize time) it is often less than 75 per cent of that on other days.

Another important conclusion was that the skilled workman is much more regular in his output than the worker not so well qualified. He does not get the "tired Saturday feeling" so soon.

In some factories the output arises until Friday, but among the less skilled workmen it was found that Thursday was the best working day.

An important consideration which the investigators kept in mind was that of the atmospheric condition in which work is done. Records of the air conditions have been taken with the output records.

In various plants the Saturday output was so low that employers found it unprofitable to operate, so they closed down. From this it would appear that on a half day the worker does not give the average of a half day of production.—Richard Spillane in the Philadelphia Public Ledger.

### Veterinarians Take Short Course

One hundred and sixty practicing veterinarians of Nebraska attended a short course in animal tuberculosis at the college of agriculture the week of March 7. The purpose of the course was to study the problems connected with tuberculosis and the use of the tuberculin test, particularly with the view of aiding the men who may be engaged in tuberculosis eradication and who will assist in accredited herd work. The forenoon was spent in lectures and discussions and the afternoon in laboratory work and practical demonstrations. A herd of sixty head of cattle was given the tuberculin test during the week, and other practical demonstrations held. At the end of the course examinations were given those who wish to become officially affiliated with the tuberculosis eradication campaign. The course was given co-operatively by the college of agriculture and the federal and state bureaus of animal industry.

### Rig Slump in Farm Products

The great slump in the value of farm products in Nebraska is revealed in a bulletin of agricultural statistics recently published by the state department of agriculture. The 1920 corn crop, though much larger, is valued at 100 million dollars less than the 1918 crop. Cattle on farms in 1920 are valued at 100 million dollars less than in 1918. The hogs in the state in 1918 were worth 61 million dollars, 42 millions in 1919, and 28 millions in 1920. The alfalfa crop dropped to a value of 35 millions, compared to 64 millions the previous year, while last year's wild hay crop was worth but little more than a third of the 1919 crop. Horses show a drop of 25 millions since 1918 and 37 millions since 1914. The 1920 wheat crop is valued at 25 million dollars less than the 1919 crop. Even the oats crop of last year was worth 11 million dollars less than in 1919.
