R-r-revenge!

He had been bitter against the old top sergeant and used to give a vivid outline of what he was going to do to him when he got out of service. Great was the surprise of a friend on meeting him about a year after he had started wearing civies again to find him carrying a parrot which he intended giving to his old enemy.

"How come?" asked the friend. thought you were sore at him." "Man, oh, man!" gloated the other.

MARKET REVIEW

Compiled by the Nebraska State Bureau.

WHEAT AND CORN ADVANCE

Shipments of Potatoes Considerably Above 1920-Market Well Supplied and Prices Somewhat Dull.

LIVESTOCK.

Cattle-Receipts of cattle at Omaha were light as is usually the case Thanksgiving week. The week started out with the smallest run for three or four months. By the middle of the week, the bulk of fed steers, mostly warmed-ups and medium short feds, sold from \$6 to \$7 and best fed yearlings at \$8.25. Grass steers sold largely at \$5 to \$5.50 with extremes of quality outside of this range. The bulk of cows and heifers, grassers, sold at \$4 to \$5 with best grass cows at \$5 and odd lots of helfers up to \$6. Common cows down as low as \$3.75.

Quite a number of stockers and feeders were carried over from the previous week and demand lacked breadth. The bulk of good feeders sold under \$5.75. Choice light and medium weights reached \$6. While plainer grades sold down to \$5 and

Hogs-Heavy receipts at the leading markets the first part of the week resulted in slightly lower prices locally. Toward the middle of the week, however, trade became more active. Choice light butchers topped at \$6.70 with the bulk selling at \$6 to \$6.60. Stronger weights sold at \$6.25 with mixed loads carrying some packing sows' at \$6 to \$6.25. The bulk of all sales ranged around \$6 to \$6.60.

Sheep-The run of sheep and lambs at Omaha was larger than expected. Receipts consisted largely of fed lambs and packers bought freely. Choice fed lambs averaging 82 lbs. brought \$8.85 Tuesday. Yearlings sold/ at \$6 to \$6.75. Most ewes at from \$4 down. Feeding lambs were active at \$8 to

GRAIN.

Wheat-The trend of the wheat market was upward. Buying was induced by advance in sterling exchange, strength in stocks and cotton, crop deterioration from drouth in Australia and a decrease in visible supply amounting to 4,505,000 bushels. Exports of domestic wheat and flour from July 1 to November 21, totaled 179,-000,000 bushels. Summary of reserves in Kansas and Nebraska showed relatively small holdings. For the week, Chicago December wheat advanced 14c; Kansas City, 4%c.

Corn-Corn was higher with wheat and shipping demand continued active. The visible supply decreased 767,000 bushels. Country offerings still reported comparatively light. Chicago December corn advanced 214c.

POULTRY.

Receipts of eggs continued light while dressed poultry shipments were heavy. Local prices: Eggs-per case, \$14-15; per dozen, select, 50-52c; No. 1, 47-50c; No. 2, 32-35c. Live poultry—Springs, 14c; Hens (light), 13c, (heavy) 17—18c; Geese, 12—15c; Ducks, 16-18c; Turkeys, 27-33c.

POTATOES.

Movement of 4,313 cars of potatoes during the week exceeded that of the previous week by about 400 cars, but was more than 25 per cent lighter h for the corresponding week a ago. Shipments for the season November 19 from late shipping ites were 83,636, compared with 61,-210 cars last season to same date. Nebraska, Utah and the Dakotas have already shipped more than their total movement last season, while California, Pennsylvania and Wisconsin have not equalled last season's shipments to date. Markets were well supplied and showed a dull, weak tone with some declines. Omaha market: Nebraska Early Ohios, No. 1, per cwt. \$1.75; No. 2, \$1.50. Red River Ohios, \$2 to \$2.25. Western Nebraska: Irrigated district-few sales. Prices unchanged. Central district-practically no demand, market weak. Table stock: sacked Early Ohios, No. 1, 90c to \$1.00; sacked Bliss Triumphs, \$1 to \$1.15. Seed stock: sacked Bliss Triumphs, \$1.25-1.50.

DAIRY.

Butter market had weak tone during the week but was firmer at close. Production holding up well. Storage butter moving slowly. Closing prices 92 score: New York, 43c; Chicago, 45c. Local prices: country (best) 30-33c; (common) 23-261/2c. Butter-fat, station price, 35c.

Works Well.

"Maud seems to have the right combination." "What do you mean?" "She keeps her age dark and her spirits light."

Brazilians Named Hammock. Hammocks are supposed to have re ceived their name from the fact that the natives of Brazil used the bark of the hamack tree for nets in which to sleep,

Britis 1 Coinage

Seven million colas are turned out every week by the British mint. One week's output of coins would, if laid out in a single later, make a gold silver and copper carpet ten yards wide and mere than a quarter of . mile long.

HENS THAT DO NOT MOLT UNTIL LATE ARE BEST EGG PRODUCERS

The Best Layers of the Flock and Those That Should Be Kept for Breed ers Do Not Molt Until November.

(Prepared by the United States Department | teln in other feeds, has been found a

Hens that devote too much attention early in the season to the fall styles in feathers are not the kind that please the flock owner. It costs too much to support them and they demand too long a vacation period. But the hen that wears her old clothes until autumn has almost passed is the best of the flock, for she has kept on laying since the previous fall or winter So now when you see a bird that looks shabbler than the others, do not conclude that she is of the no-account kind and that her smartly dressed sisters are the ones to keep. Take Short Vacation.

Of course some of the hens that molted earlier, say in August and September, are profitable enough to keep, but the cream of the flock is made up of hens that do not change their feathers until October or November. Their molting will require only a few weeks and they will probably be laying again by the 1st of January. The poor ones, the early-molting loafers, will not begin until about this time, even though they have been resting since the middle of the summer. It takes one about two months and the other twice that long to get back into production.

The poultry keeper who has an eye for business will not neglect this wornlooking late layer, for she is the best profit maker he has. She needs a highly nutritious ration if she is to be in the best condition to start on another year of high production. When she quits laying and starts to molt she has as much need for a ration strong in protein as she has when she is shelling out the eggs, as feathers are highly nitrogenous in their makeup. They use the materials supplied by beef scrap, gluten feed, and oll meal. The oil meal is very effective in keepng the feathers in a healthy condition

Hens that lay eggs late in the fall and in the winter are really producing an out-of-season crop, for it is normal for the hen to lay for a time in the spring and early summer and rest for the remainder of the year. Profitable hens are really those that have the capacity to force their egg-making machinery, but they must have the right sort of feed with which to do it. That means feeding well-balanced rations designed for the particular class, and sometimes for the particular breed. A balanced ration is a combination of feeds which furnish just the necessary amount of nutrients to produce the highest and most economical egg yields. The amount of feed needed to produce a dozen eggs varies with the kind of birds. According to experiments conducted by the United States Department of Agriculture general-purpose pullets produced a dozen eggs from 6.7 pounds of feed, and Leghorn pullets laid the same number from 4.8 pounds.

Simple mixtures are usually the most desirable. As the fall advances and the days grow shorter the birds should be encouraged to put away as much feed as possible during the day so that their bodies will have plenty to work on for all of the 24 hours. A good handful of scratch grain for each bird at night will fill the crop. It is not desirable that the hens be made to work very hard for this feed. Be sure that the hens go to roost with a

In making up rations it is necessary to adhere to standards within certain limits, but some feeds may be substituted for others, as barley, wheat, and oats for corn. However, meat scrap and other animal-protein feeds can not be replaced by high-vegetableprotein feeds. All changes should be made gradually, as sudden changes may decrease egg production.

A great many poultrymen and livestock feeders now believe that if the autmal has a free choice it will select the ration that is most suitable. At the government farm at Beltsville, Md., the following mash was made up by keeping account of the amounts of the different feeds a laying flock conannied:

Samples of Balanced Rations. Mash. Scratch Mixture 16 lbs. corn meal 1 lb. cracked corn U/2 lhs. ment scrap 1 lb. wheat

1 lb. oats

1 lb. bran

1 lb. middlings Here is a simple ration that has given very good results with Leghorns, but that has proved too fattening for Rocks and Wyandottes. Meat scrap. tt will be seen, makes up over 25 per cent of the mash.

Scratch Mixture. 3 lbs, corn meal 2 lbs. cracked corn 1 lb meat scrap For birds that are made too fat by the preceding ration, the following. e ntaming' only 16 per cent of ment screp but having considerable pro- sanitary.

Mush.

good one.

Mash. 1 lb. corn meal 1 lb. bran 1 lb. meat scrap

1 lb. middlings

of it dry.

Scratch Mixture. 2 lbs. cracked corr 1 lb. wheat 1 lb. oats 1 lb. barley

I lb. ground oats Poultrymen resort to every possible means to get their hens to eat a great deal of feed, especially in the winter when the days are short. One way is to cut the morning scratch feed to about half. The hungry bird then goes to the mash trough and gorges on the dry mash. Then to increase

the consumption of mash some of it

is fed wet at noon and the hens will

eat it when they would take no more

DARKENED CELLAR IS **URGED FOR POTATOES**

Exposure to Light Quickly Injures Quality of Tuber.

Temperature Best Suited for Proper Preservation is One Ranging From 32 to 45 Degrees-Large Piles Are Not Favored.

The object of storing any product is to preserve its quality during as long a period as may be necessary or possible in order to permit its disposal at the most advantageous time. Investigations by the bureau of plant industry, United States Department of Agriculture, show that the temperature best suited to the proper preservation of potatoes is one ranging from 32 to 45 degrees. In regions where the powdery dry rot occurs a temperature of 13 to 36 degrees holds the disease in check better than a

higher one. It is found best not to store potatoes in large piles when they are moist or covered with moist earth, as they quickly develop sufficient heat to injure the vitality of the tubers. If through unfavorable weather conditions it becomes necessary to store potatoes when they are wet and dirty, they should be spread out in a thin layer until they have become dry, after which they may be piled up. It is not desirable to store potatoes to a greater depth than six feet.

Potatoes intended for table use should always be stored in a darkened cellar or storage house. Exposure to light quickly injures the quality of the potato for food pur-

SMALL HOUSE FOR CHICKENS

New Lumber Will Make Best Appear. ance, but Packing Boxes Will Answer Purpose Well.

In building a poultry house, new lumber will of course make the best appearing structure and will also be somewhat easier to work up because it can be bought in lengths most advantageous for the purpose. Houses for a few hens can sometimes be constructed from packing boxes, while used material or second-hand lumber, if it can be purchased cheaply and is close at hand, will sometimes lower the cost of the house materially.

Occasionally, also, where a high board fence is available, the house can be built in the corner of the fence, thus saving the construction of the back and one side of the house. Care must be used to cover or batten the cracks, either by means of strips or by the use of roofing paper. Construct the building so that the front of your henhouse will admit the sunlight.

Send to the Division of Publications, United States Department of Agriculture, for bulietins containing plan and Illustrations; Farmer's Bulletin 889 is a good one to have on hand.

CEMENT FLOOR FOR FEEDING

Farmer Should Remember to Give Slope to One Side to Insure Necessary Drainage.

Farmers who build cement feeding floors should remember to give the floor a good slope to one side. This insures good drainage, facilitates cleaning and makes it possible for the feeding floor to completely fulfill its function of providing a clean place to feed hogs. Some farmers have so located these floors as to get a large amount of rainwater from roofs of nearby buildings, which flushes the loor after each rainstorm and beins paterially to keep them clean and
