

Simple, Attractive and Homelike.

A Small, Well Proportioned House With Many Novel Features—It Can Be Built For About \$5,000.

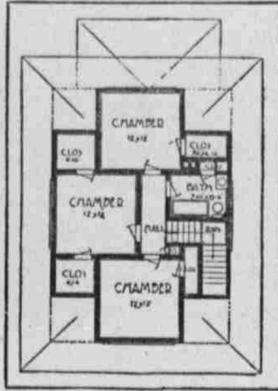

Designed by Thomas L. West, Seattle, Wash.

PERSPECTIVE VIEW—FROM A PHOTOGRAPH.

FIRST FLOOR PLAN.

SECOND FLOOR PLAN.

Here is a design for a small house combining simplicity, beauty and homelike appearance. The broad, low and well sheltered front porch with large, square columns, the low overhanging eaves of the main roof and the perfectly proportioned dormers in the second story provide an exterior which is simple and at the same time beautiful. The staircase hall is large, and the main landing is provided with a window seat. An arched opening, having square columns with heavy mission capitals and beams overhead, leads from the hall to the living room. The mission design is carried to the bracket shelf of a corner mantel of red tile in the living room. There is also an arched opening between the living room and the dining room. A pretty feature of the dining room is a deep bay, which has five leaded glass casement windows. This room also has a coffered ceiling and a plate rack. Pantry contains porcelain enameled sink, kneading boards, drawers and locker. The kitchen and pantry are finished natural and the rest of the first floor in stained mission oak. Basement, in concrete, contains furnace, fruit room, fuel room and laundry. Size, 26 by 38 feet. First story 9 feet in height; second story, 8 feet 6 inches; basement, 7 feet 6 inches. Can be built for about \$5,000.

THOMAS L. WEST, Architect.

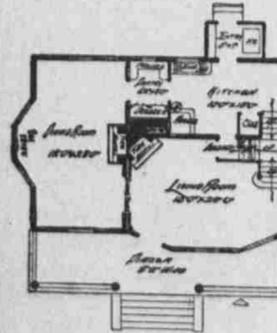

A Very Attractive Design.

A House of Moderate Size With Novel but Practical Features—Approximate Cost \$4,000.

PERSPECTIVE VIEW—FROM A PHOTOGRAPH.

FIRST FLOOR PLAN.

SECOND FLOOR PLAN.

The house shown in the photograph is of moderate size and original design, with many novel yet thoroughly practical features. Cellar under the entire structure with walls of stone and cement floor. Frame, hemlock covered with two ply paper, siding and shingles. Trim throughout of cypress, stained oak. Complete plumbing and lighting and heating fixtures are included in the estimate of \$4,000. Heating is by hot air. Lighting fixtures may be adapted for either gas or electricity. Interior finished mission style, with flat varnish. Size about 26 by 36, including bays.

Making Money On the Farm

XIV.—Poultry—The Question of Breed

By C. V. GREGORY,
Author of "Home Course in Modern Agriculture"
Copyright, 1909, by American Press Association

There are breeds, varieties and strains of poultry almost without end. To the beginner in poultry culture the question of which one to select is a puzzling one, and the older poultrymen often wonder if they would not do better to change breeds. The purpose for which chickens are kept will determine which class of fowls is best. As to the varieties within that class, it is largely a matter of individual preference. A brief description of some of the leading varieties may be of help in making a selection.

The General Purpose Breeds.

Chickens may be grouped into four general classes: (1) General purpose breeds; (2) meat breeds; (3) laying breeds; (4) ornamental breeds. The aim of the breeders of general purpose fowls is to combine laying and meat producing ability to the greatest extent possible. The general purpose birds will not average as prolific layers as some of the more strictly egg fowls. For producing meat, however, they are fully as efficient as the strictly meat breeds. For the general farmer who is keeping poultry as a side issue the returns from the general purpose breeds will usually be greater than from any of the more specialized breeds.

The most popular and most widely distributed of the general purpose breeds is the Plymouth Rock. It is a medium sized breed, deep breasted and well proportioned. Plymouth Rocks are very good layers, especially the first year. After the hens are a year old they tend to become fat and sluggish and lay fewer eggs. The meat is of excellent quality. The chickens make good broilers at from three to four weeks of age or can be profitably fed for later markets. They are early maturing and as rapid growers excel all other breeds. Chicken feeders who crate-fatten extensively put the Plymouth Rock in first place for this purpose.

There are three varieties of Plymouth Rocks—Barred, White and Buff. The great trouble with the Barred Plymouth Rock is the difficulty in keeping the color markings up to standard. They tend to become unevenly barred, the bars become too wide or too narrow or the general color too dark or too light. From a utility standpoint this factor is of little importance, but where birds or eggs are sold for breeding purposes it is important that the color markings be up to standard. The Buff Rocks have a tendency to vary somewhat from the desired shade and to produce black feathers in wings or tail. They average a little smaller than the Barred or White varieties. The White Rocks breed true to color the easiest. The hens of this variety show even more of a tendency to become overfat than do those of the Barred variety.

Plymouth Rock eggs are brown, which is something of an objection in

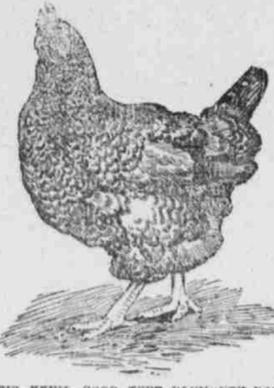

FIG. XXVII—GOOD TYPE PLYMOUTH ROCK HEN.

some markets and an advantage with others. The standard weight for the breed is nine and a half pounds for cocks and seven and a half for hens. Plymouth Rocks are criticized somewhat for lack of hardiness as compared with the other general purpose breeds, and there is doubtless some ground for this criticism. They may be greatly improved in this point by the use of birds of exceptionally strong vitality in the breeding pen.

Next to the Plymouth Rocks in popularity as a general purpose breed are the Wyandottes. They average about a pound lighter than the Plymouth Rocks. The chickens are nearly as rapid growers and produce meat of as good or even better quality.

The Wyandottes are generally considered to stand heavy feeding for rapid growth a little better than most of the other breeds. The hens are active and do not become overfat as easily as Plymouth Rocks.

There are several varieties of Wyandottes, all the same type and having the same general characteristics. The only distinguishing point is the color. With this breed, as with the Plymouth Rocks, the mixed colors are difficult to breed true to standard. For the man who does not wish to devote a

great deal of time to breeding for fancy points a solid color is preferable.

One of the newest of the general purpose breeds is the Rhode Island Red. These fowls are very hardy and for that reason well adapted to farm conditions. They rank up well with the Plymouth Rocks and Wyandottes in laying ability and as meat producers. They are about the same size as the Wyandottes, the standard weight being eight and one-half pounds for the cock and six and one-half pounds for the hen. The color is a brilliant red, with portions of the tail and wings shading off to black. The exact shade of color varies considerably.

There are a number of other general purpose breeds, such as the Dominiques, Buckeyes and Javas. The latter are about the same size as the Plymouth Rocks, though of a little different shape. They lay well, are fairly good for meat and are good sitters. There are two varieties, black and mottled. The objection applies to this breed that is made to all birds with black plumage—that the black pinfeathers detract considerably from the appearance of the dressed fowl. Such birds are seriously discriminated against in the markets. The foregoing breeds have been developed in this country and are known as American breeds. There is also an English breed, the Orpingtons, that gives very good satisfaction as a general purpose fowl.

The Meat Breeds.

The meat breeds, most of which are Asiatics, are the oldest breeds in this country. The Brahmans, one of the

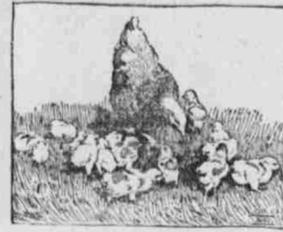

FIG. XXVIII—WHITE PLYMOUTH ROCK CHICKENS.

most common of these, are large, the male weighing eleven to twelve pounds and the hen eight and a half to nine and a half. This large size is one of the chief points in favor of the Brahmans. They are slow maturing, and it takes considerable feeding to get their large frames thickly enough covered with meat to be in good market condition. Like all feathered legged breeds, the Brahma is clumsy and for this reason does not make a first class mother. The pullets are too slow in maturing to lay many eggs the first winter. Even when matured they are not heavy layers, though they do most of their laying in the winter, when eggs are high. This is largely because their large size and heavy feathering make them less susceptible to cold. As meat producers the Brahmans are about equal to the general purpose breeds, though for high class capons they are perhaps a little superior. There are two varieties of Brahmans, light and dark. The light Brahmans are the more popular. The black variety is more difficult to breed for color, and much attention to fancy points has caused utility to be largely lost sight of.

Cochins are the second of the meat breeds in size, the males weighing eleven pounds and the hens eight and a half. They are of the same massive, full feathered type as the Brahmans, averaging a trifle shorter legged and wider across the back. Like the Brahmans, they are hardy. They are not as good layers, however, and are just as slow in maturing. There are four varieties, of which the buff is the most common.

Both these breeds have served a good purpose in grading up the mongrel strains of the country and providing foundation stock for the American breeds. At present, however, they have few points of superiority over the American breeds as meat producers and are inferior to them in laying ability. As show fowls they are prized because of their size and beauty.

The smallest and quickest maturing of the Asiatic breeds is the Langshan. They are objectionable because of their black color, white skin and feathered legs and do not excel the American breeds in any practical qualities. An English breed, the Dorkings, are good meat producers, but poor layers. For the man who is in the poultry business from a utility standpoint one of the general purpose or laying breeds will be more satisfactory than any of the meat breeds.

The Laying Breeds.

The laying breeds originally came from the region around the Mediterranean sea, and hence are often referred to as the Mediterranean breeds. The most popular of these is the Leghorn. Leghorns are small birds, not more than half the size of the Asiatics. They are very active and good foragers. They outrank any of the other breeds in laying qualities, laying both summer and winter if properly cared for. They are not adapted to the poultryman who pays no attention to his chickens, as they will not lay unless they are given good care. They lay white eggs weighing ten to the pound. The eggs of the American breeds weigh eight to the pound.

The small size of the Leghorn hens makes them cheaply kept. They are early maturing, often beginning to lay when they are four and a half months old. Their flesh is of good quality, but their size is against them from a market standpoint. The only way the cockerels can be disposed of at a profit is to sell them as broilers at two pounds weight or smaller. Of the several varieties of Leghorn the white and buff are the most popular from a utility standpoint.

National Monthly

A Democratic Magazine for Men and Women

PRICE, ONE DOLLAR A YEAR

NORMAN E. MACK, Editor and Publisher, Buffalo, N. Y.

THOMAS JEFFERSON.

ONE of the largest and handsomest illustrated magazines published in the United States. Each issue contains a mass of valuable information for Democrats in every locality, and articles by well known leading Democrats throughout the country. The NATIONAL MONTHLY will keep every Democrat thoroughly posted upon all the leading issues of the day. It will also contain a mass of Democratic news and current comment from the leading Democratic newspapers throughout the United States. In addition to the political features above mentioned every issue contains a large amount of interesting fiction and good reading for the entire family, thus making it a doubly welcome visitor in every home.

One of the thousands of letters received commending the NATIONAL MONTHLY:

Hits the Nail Right on the Head

HON. NORMAN E. MACK,
Buffalo, N. Y.

Dear Sir:—I herewith enclose you my check and ask my name to be enrolled as a regular subscriber to your National Monthly. I have just finished examining the first number. It is a publication of stupendous merit, and it will exert a great influence for good in our country. It ranks with the best magazines that are printed in all respects, and its genuine Democracy gives it distinctive superiority. It will succeed for the Democracy is not dead, but very much alive. It will help save the country from capitalistic greed on the one hand and from the dangers of socialism and anarchism on the other. I am heart and soul with you in your new enterprise. Yours truly,

FRED J. KERN,
Mayor of the City of Belleville, Ill.
