

## DRINK MORE WATER IF KIDNEYS BOTHER

Eat less meat and take Salts for Backache or Bladder trouble—Neutralizes acids.

Uric acid in meat excites the kidneys, they become overworked; get sluggish, ache, and feel like lumps of lead. The urine becomes cloudy; the bladder is irritated, and you may be obliged to seek relief two or three times during the night. When the kidneys clog, you must help them flush off the body's urinous waste or you'll be a real sick person shortly. At first you feel a dull misery in the kidney region, you suffer from backache, sick headache, dizziness, stomach gets sour, tongue coated and you feel rheumatic twinges when the weather is bad. Eat less meat, drink lots of water; also get from any pharmacist four ounces of Jad Salts; take a tablespoonful in a glass of water before breakfast for a few days and your kidneys will then act fine. This famous salt is made from the acid of grapes and lemon juice, combined with lithia, and has been used for generations to clean clogged kidneys and stimulate them to normal activity, also to neutralize the acids in urine, so it no longer is a source of irritation, thus ending bladder weakness.

Jad Salts is inexpensive, cannot injure; makes a delightful effervescent lithia-water drink which everyone should take now and then to keep the kidneys clean and active. Druggists here say they sell lots of Jad Salts to folks who believe in overcoming kidney trouble while it is only trouble.

## WOMEN! SECRET TO DARKEN GRAY HAIR

Bring back color, gloss and thickness with Grandma's recipe of Sage and Sulphur.

Common garden sage brewed into a heavy tea, with sulphur and alcohol added, will turn gray, streaked and faded hair beautifully dark and luxuriant; remove every bit of dandruff, stop scalp itching and falling hair. Mixing the Sage Tea and Sulphur recipe at home, though, is troublesome. An easier way is to get the ready-to-use tonic, costing about 50 cents a large bottle, at drug stores, known as "Wyeth's Sage and Sulphur Hair Remedy," thus avoiding a lot of fuss.

While wispy, gray, faded hair is not fun, we all desire to retain our youthful appearance and attractiveness. By darkening your hair with Wyeth's Sage and Sulphur, no one can tell, because it does it so naturally, so evenly. You just dampen a sponge or soft brush with it and draw this through your hair, taking one small strand at a time; by morning all gray hairs have disappeared. After another application or two your hair becomes beautifully dark, glossy, soft and luxuriant and you appear years younger.

## 1914 CAMPAIGN HOG CHOLERA

Close Cooperation Between Federal and State Authorities to Limit Devastations of Disease

Washington, D. C., July 16—Under the recently passed act of Congress which grants \$500,000 to combat hog cholera, the U. S. Department of Agriculture's agents will cooperate closely with the state authorities to prevent and eradicate the disease by the use of anti-hog-cholera serum and quarantine methods. Approximately \$20,000 will be spent during the coming year in each experimental area selected. Thirteen of the counties, where the work is to be carried on, have been picked out, and in 12 of these the work has already been started. Two other counties are to be selected within a short time. The 12 counties selected for the present campaign, where the work has actually been begun, are as follows:

**STATE COUNTY**  
Idaho, Twin Falls District.  
Illinois, Kankakee.  
Indiana, Montgomery.  
Iowa, Dallas.  
Kansas, Marshall.  
Kentucky, Henderson.  
Michigan, Branch.  
Minnesota, Renville.  
Missouri, Pettis.  
Nebraska, Gage and Johnson (a part of each).  
Ohio, Allen (and adjacent townships).  
Tennessee, Maury.

The thirteenth county where the work will soon be inaugurated is Deatur county in Georgia.

Appropriations will be spent in making surveys, using serum on hogs on infected and exposed farms, in sanitation and quarantine work, and in organizing farmers to cooperate with the state and federal authorities. In addition, funds will be used for the production by the department of anti-hog-cholera serum and for the inspection and proper control of serum prepared by private and other agencies.

Extensive demonstration and educational work also will be undertaken in territory outside of experimental areas to acquaint farmers with the results of the experiments and to supply them with information as to the methods of controlling the disease.

**Method of Procedure**  
The method of procedure in the actual areas where the demonstration work will be conducted are as follows:

1. **Education.** Assemblages of farmers to be arranged in each school district of each experimental area. The objects sought and methods of procedure will be explained and full information given regarding the nature, cause and prevention of hog cholera. Further educational work to be carried on through the distribution of publications and through personal interviews with farmers.

2. **Organization of Farmers.** This organization will be made up as follows: A leader for each township and nine associates will be selected. Each associate will have assigned to him an area of about four sections for survey. The men in this organization will serve as volunteers without salary, and they will keep the United States Inspector in charge advised concerning the conditions in the county and will also aid in securing the required statistics of the hog industry.

3. **Survey.** A complete survey will be made to determine the number of hogs raised and the number lost from hog cholera prior to beginning the work and during each year thereafter during the life of the project.

4. **Sanitation and Quarantine.** This will comprise the regulation of shipment of hogs into and out of the experimental area, the regulation of shipments, within the area, the quarantine of infected places, destruction of dead animals, cleaning and disinfection of railroad chutes, pens and loading places, etc.

5. **Immunization and Treatment with Anti-Hog-Cholera Serum.** Serum to be applied to hogs on infected farms and on exposed farms by the United States inspectors in such manner as they may deem necessary.

6. **Serum Production.** All anti-hog-cholera serum required is to be produced and supplied by the Bureau of Animal Industry, provided that in the event of the inability of that bureau to produce sufficient serum the several states will supply the deficiency in so far as possible without cost to the United States Department of Agriculture.

## Organization and Cooperation

1. **State Organization.** The state Agricultural College, or other state agencies, will place in each experimental area at least one qualified man who, with the cooperation of the United States inspectors, and county advisors, will carry out the necessary educational work, organization of farmers, and make an accurate survey of the area.

The Live Stock Sanitary board, or other proper state authorities, will place in each area at least one qualified deputy who will enforce, in so far as state laws will permit, such sanitary and quarantine measures as may be deemed necessary by the United States Department of Agriculture.

2. **Volunteer Organization.** To be composed of farmers residing in the experimental area and to be selected jointly by the United States field inspectors in charge and representatives of the State College. United States Department of Agriculture Organization

1. **Field Forces.** One supervising field inspector. The functions of this officer will be to visit the various experimental areas, to advise with the United States inspectors in charge of work, thus giving to each inspector the benefit of observations made in other areas and thereby increasing efficiency.

2. A force located in each experimental area will be maintained as an independent unit reporting directly to the chief of the Bureau of Animal Industry. The force to be maintained in each area will consist of one inspector in charge, one or more assistant inspectors and one clerk. The size of the organization in each area will be governed by the necessities of the case and the funds available.

3. **Laboratory Force.** One Inspector in charge, with the necessary scientific assistants, clerks and laborers to prepare sufficient anti-hog-cholera serum to supply the needs of the various field inspectors.

4. **Cooperation and Organization**  
The United States field inspector in charge in each experimental area is to be recognized as the local leader of the project. This official, by conference with the local state representatives, will arrange for the details of carrying out educational work, quarantine and sanitation, and other activities. State officers shall at all times be furnished with full information concerning the general progress of the work and the United States field inspector in charge shall likewise be advised concerning the general progress of the work and results of work carried on by the local state officers.

The salaries and expenses of employees of the United States Department of Agriculture will be borne entirely by that department, and similar expenses of state officers will be paid by state or local agencies.

5. **Contracts or Agreements**  
No contract or agreement in connection with this work will be regarded as binding upon either the state or the Department of Agriculture unless made in accordance with the principles laid down under the heading "Organization and Cooperation."

We now urge all our subscribers to renew their subscription to The Herald and get four magazines one year for only 18 cents extra. WRITE OR PHONE.

**Severe Attack of Colic Cured.**  
E. E. Cross, who travels in Virginia and other Southern States, was taken suddenly and severely ill with colic. At the first store he came to the merchant recommended Chamberlain's Colic, Cholera and Diarrhoea Remedy. Two doses of it cured him. No one should leave home on a journey without a bottle of this preparation. For sale by all dealers.—Advertisement.

Take Hall's Family Pills for constipation.

Prices that tell—Goods that sell—\$15.00 will buy any Suit at "Laing's" Saturday and Monday, July 18-20.

## EASIER SHIPMENT OF LIVE STOCK

New Regulations Governing Interstate Movement of Live Stock Became Effective July 1

New regulations governing the interstate movement of live stock became effective July 1, 1914. These changes are designed by the Department of Agriculture to facilitate the movement of live stock from quarantined areas or from public stockyards. The new regulations, which are known as B. A. I. (Bureau of Animal Industry) Order 210, superseding B. A. I. Order 143, deal with the shipment of cattle from tick-infected areas, with the movement of swine from public stockyards and with the dipping of cattle and sheep for scabies.

Hereafter cattle that have been dipped once under state or federal supervision may be shipped from an area quarantined for ticks to a market center where there are proper dipping facilities and the department maintains an inspector. After a second dipping there under his supervision the cattle may be sold for any purpose. Hitherto it has been necessary in times of drought for cattle owners in quarantined areas to slaughter their stock or sell it for slaughter for whatever it would bring. The resulting loss will, it is hoped, be done away with under the new regulation.

The provision permitting, under certain strict conditions, the transportation of hogs from public stockyards into interstate commerce has been made possible by the discovery by government scientists of a serum which renders swine immune to hog cholera. Hitherto all stockyards have been considered as infected with this disease. Now, however, it is considered safe to permit the shipment of hogs which have been treated with serum and which show no symptoms of suffering from any form of disease. As a result of this it is expected that thousands of lightweight hogs will be sent from the stockyards to the country for feeding and fattening and that the country's total production of pork will be greatly increased thereby.

The new regulations also withdraw all permission for the use of nicotine solutions, coal-tar creosote, and cresol preparations in the official dipping of cattle and sheep for scabies. This step has been made necessary by the difficulty experienced in keeping baths of this nature at a strength sufficient to eliminate all danger of disease without having them so strong as to be injurious to the animals themselves. The department therefore decided to insist upon a field test of the strength of all solutions used for dipping. A practical field test for this purpose is available in the case of the sulphur sulphur used in lime in sulphur baths for scabies, and for arsenious oxide in arsenical dips for cattle tick. Official dipping, therefore, will hereafter be confined to the lime-and-sulphur and arsenical baths.

## Regulation for Preparation, Sale and Importation of Serums and Similar Products

The Department of Agriculture under the appropriation act for the fiscal year ending June 30, 1914, was given power to regulate the preparation, sale and importation of viruses, serums, toxins, and similar products intended for the treatment of domestic animals. The hog-cholera act provides that not less than \$50,000 of the total may be used in this work.

The purpose of the work is to protect farmers from serums that are either dangerous, under strength, or ineffective.

The general method of procedure will be to inspect establishments which do an interstate business in serums, toxins, etc., and to issue a license to those that comply with the regulations. In addition the department will take samples and test serums in interstate commerce and recommend revocation of licenses or prosecutions where the facts warrant. In the case of imported serums, admission will be refused any serum which is found to be dangerous or spurious.

## Headache and Nervousness Cured.

"Chamberlain's Tablets are entitled to all the praise I can give them," writes Mrs. Richard Oly, Spencerport, N. Y. They have cured me of headache and nervousness and restored me to my normal health." For sale by all dealers.—Advertisement.

## IT KEEPS OFF FLIES

and allows the cattle to feed in peace. It does not gum the hair, blister the skin or make milk taste or smell. Saves double its cost in extra milk.

## Cow-Ease

is a clean non-penetrating liquid that is absolutely harmless—easy to apply. Keeps the cows in good condition and makes money for the farmer. Try it to-day.

fixtures of the

## Regan Store

Well located and doing a good business. Stock well selected, all new and bought to sell at reasonable rates.

To much work for present owner is the only reason for selling.

## American Rates

## Lowest in the World

Here are the actual prices paid for service per telephone per year in five leading European countries having government ownership, taken from official reports and translated into American money:

|         |       |         |
|---------|-------|---------|
| Austria | ..... | \$24.86 |
| Belgium | ..... | 39.05   |
| France  | ..... | 28.61   |
| Germany | ..... | 22.69   |
| England | ..... | 32.60   |

The average is \$29.58 against an average of \$30.45 charged by the Bell System in America; but remember, in Austria \$1.00 will buy what requires \$2.00 in the United States in payment of wages and the purchase of necessities; in Belgium the ratio of prices as compared with the United States is about \$1.00 to \$2.32, in France \$1.00 to \$1.48, in Germany \$1.00 to \$1.50 and in England \$1.00 to \$2.28.

When the efficiency of the service is considered and when the relative cost of producing the service is computed, American telephone rates are by far the cheapest in the world.
